# Daily Reading 每日阅读

## Passage one

The English countryside has a **classic image**. People **imagine** that life in the country is slow and **calm**; that there are no traffic jams, no **pollution**, and no **crime**. In some places, this is true; but in **others** it is not. Small towns and villages are becoming **more and more popular**; people have more **space** and most houses have gardens. But problems are **growing**. Lots of people want to live in the country and work in the city; so more and more people travel **long** distances each day, to go to work. Of course they don't use buses or trains; they use cars. Little villages now have traffic problems in the morning, **just like** big cities!

The problems are very **complicated**! If everyone **moves into** the country, the **peace** of the countryside will **disappear**! People leave cities and big towns, to **escape from urban** problems; but more and more, they are **bringing** their problems **with**

them. **On warm summer days**, and cold winter days, **air pollution** can be a big problem in large **parts** of the south of England, not just in London.

**Perhaps** there is **hope** for the future. Soon Britain's population will stop **rising**. From about the year 2030, it will perhaps start to **fall**. In 100 years' time, there will be less people in Britain than today - perhaps two million less. **No doubt** there will be **less** pollution too; oil and petrol will **probably** be **rare by then**.

英国乡村有一种**经典的**景象。人们**想象**乡村的生活是缓慢而**平静的**;没有交通堵塞，没有**污染**，没有犯罪。在某些地方，这是事实;但在**其他地区**却不是这样。小城镇和村庄变得**越来越受欢迎**;人们有了更多的**空间**，大多数房子都有花园。但问题正在**增加**。很多人想住在农村，在城市工作;所以越来越多的人每天**长途**旅行，去工作。当然他们不用公共汽车或火车;他们使用汽车。小村庄现在早上也有交通问题，**就像**大城市一样!

这些问题很**复杂**!如果每个人都**搬到**农村去，农村的**宁静**就会**消失**!人们离开城市和大城镇，以**逃避**城市问题;但他们也**带来**了越来越多的问题。**在温暖的夏天**和寒冷的冬天，空**气污染**不仅仅是伦敦，在英格兰南部的**大部分地区**都是一个大问题。

**也许**未来还有**希望**。英国人口很快就会停止**增长**。大约从 2030 年开始，它可能会开始**下降**。100 年后，英国的人口将比今天少——可能少 200 万。**毫无疑问**，污染也会**减少**;到**那时**，石油和汽油**可能**会变得**稀缺**。

## Passage two

Cloud computing(云计算) **means storing** and **accessing** data and programs **over** the Internet **instead of** your computer's hard drive. It **involve computing** over a network, where a program or application may run on many connected computers **at the same time**.

For some, cloud computing is a metaphor (隐喻) for the Internet. It **typically** uses **connected** hardware machines called servers. **Individual** users can use the server's **processing power** to **run** an application, **store** data, or **perform any other** computing task.

For **businesses**, cloud computing is an **ideal** way to **reduce expenses**.For example, companies may buy services in the cloud. **That is to say**, **instead of installing** applications on every **single** computer in the company, cloud computing would **allow** workers **to** log into a Web-based service(a cloud) which hosts all the **programs** individual users would need for their job.

While cloud computing could change the entire computer industry, there are still some **concerns** about the **security** of the data **stored** on the **remote** machines. It is true that it **promises** to save a lot of work. However, this technology **raises a fundamental question.** Is it safe to store one's data on someone else's computer? The cloud service provide needs to **establish relevant** policies that describe **how** the data

of each cloud user will be **accessed** and used. Cloud service users should also be able to encrypt(加密) **data** that is **processed** or stored within the cloud to prevent unauthorized **access**.

云计算**是指通过**互联网**而不是**计算机硬盘来**存储**和**访问**数据和程序。它在网络上进行**运算**，其中程序或应用可以**同时**在许多连接的计算机上运行。

对一些人来说，云计算是互联网的一种比喻说法。它**通常**使用**连接的**硬件机器，这种机器称为服务器。**个人**用户可以使用服务器的**处理能力**来运行应用程序、**存储**数据或**执行其他**计算任务。

对于**企业**来说，云计算是减少**开支**的**理想**方法。例如，公司可以在云中购买服务。**也就是说，**云计算不是给公司**每**台电脑上**安装**上应用程序，而是允许员工登录一个基于网络的服务(云)，该云上有个人用户工作所需的所有**应用程序**。

虽然云计算可以改变整个计算机行业，但人们就**存储**在**远程**计算机上的数据的**安全性**，仍有些**担忧**。的确，它可以帮助我们省去大量的工作。然而，这个技术**带来了一个根本性的问题**：把自己的数据存储在别人的电脑上安全吗？为了规范云服务使用，我们需要**制定相关**的政策来规定每个云用户的数据被访问和使用的方式。云服务用户还应该能够对云中**处理**或存储的的**数据**进行加密，以防止未经授权的**访问**。

## Passage three

Every day, they slowly **accumulate**. Plates **covered** in sauces and bread pieces. Bowls with a fine **layer** of who-knows-what. Forks, knives, and spoons all **stuck with** bits of this and that. **At the end of** a long day of work, cooking, cleaning, and, for many, **negotiating with** small children, a **couple** has to **face** the big question: Who is going to do the **dishes**?

A recent report on family dynamics **suggests** that **the answer to that question** can **have a significant impact on** the health and long lasting of a relationship. The study **examined** a variety of different **household tasks**, **including** shopping, laundry and housecleaning, and found that, for women in families, it's more important to **share** the responsibility of doing the dishes than any other task. Women who wash the vast majority of the dishes themselves report **more** relationship **conflict** and less relationship **satisfaction** than women with husbands **who** help. Women are happier about sharing dish washing **duties** than they are about sharing any other household task.

What is it about dishes? Dan Carlson, **assistant** professor of family and consumer studies at the University of Utah, and the **lead** author of the study, offers his own observations: "Doing dishes is **gross**. **Besides** , **unlike** some other household tasks such as cooking or gardening, doing dishes well does not **generate** praises."

每天，它们慢慢地**累积**。盘子里**满是**调味汁和面包片。碗里覆盖着**一层**薄薄的不知道是什么东西的物质。叉子、刀子和勺子上都**沾有**这种和那种的食物。在**结束**一整天的工作**后**，做饭、打扫以及和小家伙们**谈判**，夫妻不得不**面对**这样的问题：谁来**洗碗**？

最近一篇关于家庭活力的报道显示，上述问题的答案，对健康和家庭关系的持久性有着很大的影响。该报告分析了许多不同的家务：包括购物，洗衣和清扫房屋，发现对于家庭中的女性来说，分担洗碗的责任比分担其他家务更重要。调查显示，相比于丈夫帮忙洗碗的女性来说，独自承担洗碗的女性的家庭会有更多的冲突，满意度也更低。相比于分享其它家务，女性会更乐于共同分享洗碗的任务。

丹·卡森，研究家庭与消费者研究的犹他大学副教授，同时也是该项研究的主作者，提出了自己的观点：洗碗很糟糕，而且不像其它的家务如烹饪或园艺，洗碗洗得好并不能得到称赞。

## Passage four

How many people can live on the **face** of the earth? No one knows the answer. It **depends on** how much food people can grow **without** **destroying** the environment.

More people now **exist** than ever before, and the population **keeps** growing. Every 15 seconds, about 100 babies are born. Before the end of this century, the earth may **hold** 10 billion people!

To **feed** everyone, farmers must grow more food. They are trying to do so. World food production has gradually **risen** over the years. In some parts of the world, **however** , the population is growing faster than the **food supply**. Some experts **fear** the world will not **be able to** produce enough food for a **population** that never stops increasing.

To grow more crops on the same **amount** of land, farmers use fertilizers and pesticides(杀虫剂). Some plant new kinds of grains that produce more food. These things help—**but** they don't provide **perfect solutions**. The **chemicals** in fertilizers and pesticides can **pollute** water supplies. The new seeds developed by scientists have **reached the limit of** what they can produce.

When hungry people can get no more **out of existing** field, they clear trees from hills and forests for new farmland, and in doing so they **expose** the soil. Then rain and floods may **strip** the topsoil(表层土) from fields. This process is called **erosion**. Each year erosion **steals** billions of tons of topsoil from farmers.

地球上能生存多少人？没有人能给出答案。这取决于人们能种植多少粮食而又不破坏环境。

现在，地球上生存的人比以往任何时候都多，而且还在持续增长。每 15 秒钟就约有 100 个婴儿出生。不用到本世纪末，地球上的人口就可能达到 100 亿！

为了养活每个人，农民们必须种植更多的粮食，他们也在努力这样做。世界上的粮食产量在逐年上升，而在有些地方，人口的增长速度却超过了粮食的供给的速度。一些专家担心，世界将无法为不停增长的人口提供足够的粮食。

为了在等量的土地上种植更多的粮食，农民们便使用化肥和杀虫剂。有的农民种植产量高的新品种谷物，这些方法能有帮助，但不能提供完美的解决方案，

化肥和杀虫剂中的**化学物质**会**污染**水源，科学家研发的新种子也**到了**可以产出粮食**的极限**。

当饥饿的人们在**现有的**土地上无法获得更多的粮食时，他们就砍伐山上的树木以得到新的土地，这样做的结果是将表层土**暴露**出来，于是雨水和洪水就会把田野中的表层土**冲刷掉**，这个过程即称为“**侵蚀**”。每年由洪水所造成的侵蚀从农民手中**夺走**了数十亿吨表层土壤。

## Passage five

The history of transportation is very long and full of changes and **inventions**. It starts **with** walking, which is not any invention; it just **takes energy**. People **used to** walk to **get to** other places. If you wanted to get somewhere quickly, the **only** way to do that was to run. Actually, the first invention for transportation **probably** was the shoe. Centuries ago there were no shoes, and people walked barefoot.

Then people invented **ways** to **transport** themselves and **materials** from one place to another. In some cultures, people **invented** sledges (雪橇)，**which** are a kind of board that you **drag** along the ground. You can **tie** things on the sledge to help carry them, but it’s a **challenging** invention **since** if you **hit** a rock with the sledge as you **pull** it, the **contents** can **slip off**. In other cultures, people invented the wheel, which they used to make it easier to move things—and people. That was the beginning of many innovations in transportation.

**Once** people had wheels they could invent other ways to travel. They could put the wheels on a board and make it a wagon, and then they could **fasten** that wagon **to** an ox or a horse and ride as well as carry materials. That wheel **led to what** we have today: trucks, automobiles, and even boats and planes. For example, there were steamboats that used **giant** wheels that turned with blades, pushing the water and **pushing** the boat **forward**.

**【参考译文】**

交通的历史非常久远，充满了变化和发明创造。交通始于步行，这算不上什么发明，只需消耗能量。在过去，要到别的地方，都是靠走路。如果你想快速到达，只能跑。实际上，第一个关于交通运输的发明**可能**是鞋子。几个世纪以前，是没有鞋子的，人们都赤着脚走路。

随后人们发明了能够把人和货物从一地运输到另一地的**方法**。在一些文化当中，人们发明了雪橇。雪橇是用木板制成的，由人拖拽沿地面前行。你可以把货物绑在雪橇上来运载，但同时雪橇也是一项有挑战性的发明，**因为**一旦撞上石头，雪橇上面的货物就会**滑落**。在另些文化中，人们发明了轮子，用来方便运输。这些就是最早形式的交通发明。

**一旦**人们发明出轮子，他们就能够发明其他的出行方式。他们在轮子上装上木板，做成车，然后把车**固定**在牛或者马背上，可载人，可运货，这就是早期的四轮运货马车。后来逐渐产生了我们今天拥有的一切：卡车，汽车，帆船和飞机。例如，曾经的汽船，通过桨叶转动巨轮，从而推动汽船向前行驶。

# Passage six

When asked about the **impact** of **disturbing** news **on** children, one mother said: "My 11-year-old daughter doesn't like watching the news. She has **nightmares** about what she has seen. One time, she watched a report about a person who killed a family member with a knife. That night she dreamed that she too was being killed." Another interviewee said: " My six-year-old niece **saw** reports of tornadoes (龙卷风) from elsewhere in the country. For weeks **afterward**, she was terrified. She **would** call me on the phone, convinced that a tornado was coming her way and that she was going to die."

Do you think disturbing news reports can **frighten** children? In one survey, nearly 40 percent of parents said that their children had been **upset** by something they saw in the news and that,
**as a result,** the children had **feared** that a **similar** event would happen to them or their loved ones. Why? One factor is that children often **interpret** he news differently from adults. For example, small children may believe that a **tragedy** that is broadcast repeatedly is really happening repeatedly.

A second factor is that daily reports of disturbing events can **distort** a child's **view** of the world. True, we live in "**critical** times hard to **deal with**." But repeated **exposure** to disturbing news reports can **cause** children to **develop lasting fears**. "Children who watch a lot of TV news **tend** to **overestimate** the **occurrence** of crime and may **perceive** the world to be a more dangerous place than it actually is," observes the Kaiser Family Foundation.

【参考译文】

当问及令人担忧的新闻对孩子的影响时，一位妈妈说："我 11 岁的女儿并不喜欢看新闻。她对于自己所看的东西会做**梦魇**。有一次，她观看了一则新闻：一个人用一把刀杀害了全家。当天晚上她就梦到自己也被杀了。"另一位被采访者说："我 6 岁大的侄女看了其它地区龙卷风的报道。**之后的**几周，她都很恐惧。她甚至**要**给我打电话，深信龙卷风就要来她这里了，她即将要死了。"

你认为令人担忧的新闻报道会让孩子们感到恐惧吗？在一次调查中，几乎有40%的家长认为他们的孩子对于看到这种新闻会感到**不安**，**结果是**，孩子们恐惧相似的事情会发生在自己或亲人身上。为什么会这样？一个因素是孩子**对**新闻**的理解**与成年人不同。举例来说，如果新闻报道被重复报道，那么小孩子会认为这种悲剧一直在重复发生。

第二个因素是令人担忧的日常报道会歪曲孩子的世界**观**。确实如此，我们生活在一个"难**以应对**的极其重要的历史时代"。但是令人担忧的新闻的接连报道会造成孩子产生持续性的恐惧。凯撒家庭基金会的观察员说："经常看电视新闻的孩子**往往**会高估犯罪的发生率，甚至可能会认为这个世界要比实际更危险。"

## Passage seven

**Ironically**, a study finds that we're **awful** gift-givers **precisely** because we **spend** too much **time trying** to be **considerate**. We **imagine** our friends **opening** a gift that is **impressive**, expensive, and **sentimental**. We imagine the look of happiness and surprise on their faces and the **warmth** we feel **in return**. But there's something that the most sentimental-gift-givers tend not to think too much about: **whether** the gift is **practical** in the first place.

**In many case**, **practicality** seems like an **enemy** of great gift giving. Beautiful jewelry, lovely watches, perfect rugs, finely crafted kitchen hardware: These things **make for** great gifts because they **communicate** something beyond practicality. They communicate that the giver cares.

But do the receivers care? Often, no. "Gift receivers would be **happier** if givers gave them **exactly** what they requested **rather than** attempting to be '**thoughtful and considerate**' by buying gifts they did not **explicitly** request" to surprise them, the researchers write. Their clever paper asks givers and receivers to **measure** gifts from two **perspectives**: **desirability** (e.g. the cost of a coffee maker) and feasibility (e.g. the **ease** of the coffee maker). Across several experiments, they find that givers **consistently** give gifts based on desirability and receivers **continuously favor** gifts based on feasibility .

【参考译文】

具有讽刺意味的是,一项研究发现我们实际上都是糟糕的礼物赠送者，因为我们花太多的时间努力做到考虑周全。我们想象着我们的朋友打开那份感人的、昂贵的且富有情感的礼物时脸上开心和惊讶的表情，反过来自己也会感到温暖。然而，最用心的礼物赠送者往往不会考虑一些事情：礼物首先是否实用。

在很多情况下，实用性似乎是最佳礼物的敌人。漂亮的珠宝、可爱的手表、完美的地毯、精致的手工厨具：这些都是很好的礼物，因为他们能向接收者传递一些超出实用的信息，传递着赠送者的关爱。

但是收到礼物的人在乎吗？通常是不在乎的。研究人员论述，赠送者赠送自己绞尽脑汁想让对方惊讶的礼物，所购买的礼物却是对方显然不想要的，而如果赠送对方真正想要的礼物，那么接收者肯定会更开心。调查问卷建议赠送者和接收者要从两个方面来衡量礼物：满意度（比如：咖啡机的成本）和实用性（比如：咖啡机的省力）。通过几次实验，他们发现赠送者在赠送礼物时总是从满意度出发，而接收者对礼物的喜爱总是基于实用性。

## Passage eight

Riding a bike is good **exercise** and great fun. But what do you **do with** a bike after you **outgrow** it? Nicole Basil, 12, has **a terrific answer to** this question. When she was 8years old, she **created** Pedal Power. It is a **charity** that **collects** bikes that kids have outgrown and **donates** them to Chicago public schools.

Since 2008, Nicole has collected and donated more than 1,000 bikes. **In addition to** the bicycles, Pedal Power **supplied** riders **with** 400 helmets (盔) last year. "It is important to ride **safely** on a bike, and helmets are a big part of that," Nicole says. The

Wilmette Bicycle& Sport Shop helps to **ensure** that all donated bikes are safe to ride. Each bike receives a five-minute **check-up** by the shop's employees.

The bikes are given to students who have good **grades** and perfect **attendance**. Nicole says: "Some kids aren't **as** lucky **as** others, **but** they still do well in school. I think they should be **rewarded** for that." Nicole has received e-mails and phone calls from parents and teachers that say test **scores** are improving. "Bikes can take you far," she says. "Good grades can take you even **further**."

Bart Dassinger is the **principal** of Cesar E. Chavez school in Chicago. Students in his school have **received** bikes. "It's been a great way to **motivate** students to do their best,"Dassinger says. "They work hard to make it happen."

**【参考译文】**

骑车是很好的锻炼，也很有趣。但是当你长大后骑不了原来的自行车，你会怎么办？12 岁的尼科尔·巴兹尔对此问题有相当好的答案。当她 8 岁的时候，她**创办**了'踏板力量'，这是一个慈善机构，收集孩子骑不成的自行车，并捐给芝加哥公立学校。

从 2008 年起，尼科尔收集并捐赠了超过 1000 辆自行车。**除了**自行车**以外**，去年"踏板力量"还提供给骑手们 400 多个头盔。'骑车**安全**很重要，头盔是其中重要部分。'尼科尔说。wilmetete 自行车运动商店帮助**确保**所有的捐赠自行车都是安全的。每辆自行车都会得到店员的 5 分钟**检查**。

这些自行车被捐赠给成绩好和考勤好的学生。尼科尔说："有些学生不如其他人那么幸运，**但是**他们依然在学校表现很好。我认为他们因此应该得到**奖励**"。尼科尔收到了家长和老师的邮件和电话，说孩子们**分数**在提高。她说："自行车能带你远行，但是好成绩能带你走**更远**"。

巴顿· 戴辛格是芝加哥 Cesar E. Chavez 学校的校长，他所在学校的学生收到了自行车。他说："这是鼓励学生不断进步的好方法，他们为得到自行车更努力。

## Passage nine

Why do kids **hate** Brussels sprouts (芽甘蓝)? Because Brussels sprouts are bitter, and kids generally don't like bitter tastes. But it's not their **fault** . Researchers say that **a dislike for** bitter and sour is a **survival instinct**, since most toxic substances **taste** that way too. **On the other hand,** sweetness **typically** indicates that something is **safe** to eat, so children **are born with** a **preference** for sweets.

What we like to eat changes over time. As we age, we realize that **even though** something tastes bitter or **sour**, it won't kill us, and we learn to **enjoy**. When we're older, we **lose** some of our smell **sensitivity**. Humans need smell to **experience** flavor, which **is different from** taste. With our senses **diminished**, we'll probably begin **adding** sugar and salt **to** our food, to **heighten** the flavor. **In fact**, there's a theory that the reason many especially "big"-tasting wines in recent years have won awards is that wine **critics** are getting older and finding **subtle** flavors **harder** to **sense.**

If someone is **unable** to **detect** flavors at all, he may have a taste **disorder**, which can be caused by a tongue **injury** or brain **damage**. Or it could be a problem with **smell** . The channel that separates the mouth from the nose **allows** us **to** smell behind our nose and is **crucial for** enjoying most **complex** flavors. That's why food

seems **flavorless** when we have a **stuffy** nose—**expect** chicken noodle soup. It's so **salty**.

【参考译文】

孩子们为什么讨厌吃布鲁塞尔芽甘蓝？因为芽甘蓝比较苦，而且孩子们通常都不喜欢苦味。但这不是他们的**错**。研究人员发现，不喜欢苦味和酸味是人的生存本能，因为许多有毒的物质**尝起来**也是那个味道。另一方面，甜味通常说明东西是食用**安全的**，因此孩子们天生**偏爱**甜食。

我们喜欢吃的东西会随着时间的推移而改变。随着年龄的增长，我们会发现，**即使**有些东西尝起来苦或酸，但并不会致我们于死地，因而我们要学着**享受**它。当我们老了时，我们的嗅觉灵敏度会有所下降。人类需要嗅觉来感知味道，这与品尝是不一样的。随着我们感官的退化，我们可能开始往食物里**添加**糖和盐，以加重味道。**实际上**，有这么一个理论，近年来，特别是很多"重"口味酒获奖的原因就是：酒评家变老了，所以**较难**感觉到细微的口感。

如果一个人完全**不能**辨别味道，他可能是味蕾**失调**，这是由舌头受伤或大脑受损引起的。或者可能是**嗅觉**的问题。分离嘴和鼻子的通道使得我们可以闻到鼻子后面的味道，这对享受许多复杂的味道**至关重要**。这就是为什么当我们鼻塞时，食物吃起来**无滋无味**——除了鸡面汤，因为它实在太咸了。

## Passage ten

Zoos have become an important site for the preservation and protection of wildlife resources,___ **especially** those species that are endangered. **At one time**, many zoos displayed live animals for public entertainment. Presently some zoos have become scientific and educational **institutions** that have contributed to the understanding and conservation of wild animal populations. **Among** the challenges facing modern zoos are the cost of upgrading old facilities, the struggle to obtain **sufficient** operating funds, and the need to attract more visitors to new and entertaining exhibits.

Many **older** zoos in American cities have undergone renovation (翻新) during the last decades of the twentieth century. Among the recent trends in zoo **improvement** is the construction of new enclosures that resemble natural habitats (栖息地). The replacement of traditional steel bars and concrete floors **with** appropriately designed surroundings improves visitor appreciation of the animals. Such renovations may **reduce** stress on animals and allow them to interact with one another more naturally.

Several major zoos conduct captive propagation programs. A captive propagation program includes the breeding of **selected** zoo or wild animals to obtain offspring, usually for release to **the wild** or for transfer to other zoos. Captive breeding is one method of **saving** some species from extinction.

Zoos have expanded and improved public education programs also, with education departments that develop programs **related to** zoo exhibits. Public activities include in-school programs, zoo tours, special events, and websites. The Zoological Society of New York, for example, conducted a major project with a Western African government to monitor an elephant herd **as** it moved throughout its range.

The importance of zoos will increase as natural habitats are diminishing. Through their efforts **in support of** conservation, education, and environmental advocacy, zoos will continue to play a critical role in wildlife preservation throughout the world.

【参考译文】

动物园已经成为保护野生动物资源，特别是濒临灭绝的物种的重要场所。在过去，许多动物园展示活生生的动物供公众娱乐。现在，一些动物园已经成为科教机构，为了解和保护野生动物发挥了一定作用。动物园目前正面临诸多挑战，包括更新陈旧设施的成本费用，如何获取充足的运营资金以及吸引更多游客前来观看新奇且有趣的展览。

在 20 世纪的末的几十年，美国很多老式动物园都翻新过了。建设类自然栖息地的新型场地成为动物园改造的主要潮流之一。拆除传统的钢制栏杆和混凝土地面，改为设计合理的场地，游客可以更好地观赏动物。这样的翻新有助于减少动物承受的压力，动物间的交流更加方便自然。

有几个大型动物园开展了圈养繁殖项目，包括对园内或野生动物精挑细选，繁殖成功后通常放生大自然或转给其他动物园。圈养繁殖是防止物种灭绝的一种办法。

此外，动物园也扩大和改进了公共教育项目，教育部门也开展了与动物展出相关的项目。公众活动包括校内教育项目、动物园参观、专项活动以及网站交流。例如纽约动物协会就与西非政府共同开展了针对象群移迁移进行观察的重大项目。

自然栖息地缩减后，动物园的重要性与日俱增。通过保护野生动物、公众教育和环境保护的支持，动物园将在全球保护野生动物方面发挥至关重要的作用。

## Passage eleven

It **sounds** like something **straight** out of a science fiction movie or a silly cartoon: a futuristic traveling tube that can quickly **shoot** people wherever they want to go, inside a **tiny** pod. But this may be just **around the corner** for people **looking for** a faster, easier, and cheaper-than-ever way to travel.

South African-American **inventor** and **billionaire** Elon Musk, who, in the past, has worked on both private space flight and **electric** cars, recently **announced** he has been **working on** the design of this traveling tube, which could forever change the way we travel the world.

In an **interview**, Musk **described** the new tube **as** a **fifth** kind of transportation. "We have planes, trains, **automobiles**, and boats," he explained. "What if there was a fifth mode? I have a name for it. It's called the Hyperloop."

"This system I have in mind... can never **crash**, **is immune to** weather, it goes three or four times faster than the **bullet** train...it goes at an **average** speed of twice what an aircraft would do. You would go from **downtown** L.A. to downtown San Francisco in under 30 minutes."

People using the Hyperloop would shoot around in pods, which are each just over six-and-a-half **feet** across, and the pods would travel through tubes **located** either **above** ground or under water.

The Hyperloop could even run 24/7,be cheap, and allow people to travel **on their own schedule**. People could **show up** at the Hyperloop station whenever they want and be quickly sent on their way.

**Additionally** Musk believes the Hyperloop could be **completely powered** by the sun－making it more environmentally friendly than cars, airplanes, or train systems. Someday it could possibly move people between the East and West Coasts of the United States in **less than** an hour. **Eventually** the Hyperloop would **be able to** move people **around the world**.

Musk not the first person **outside of** science fiction novelists to **dream up** vacuum tube technology for moving people. The idea has been **around** for some time, and inventors in other countries, **including** China, are reportedly working on **similar** technology.

【参考译文】

这听起来像直接来自科幻电影或傻傻的的动画片中的东西：内部设有小舱的未来旅行管道，可以快速将人们发射到想要去的地方。但对于寻求比以往更快，更轻松，更便宜的出行方式的人们来说，这可能指日可待了。

南非裔发明家和亿万富翁埃隆·马斯克（Elon Musk）过去曾致力于私人太空飞行和电动汽车领域的研究，最近他宣布，一直在研究这种旅行管，这可能永远改变我们环游世界的方式。

在一次采访中，马斯克将这种新型管道称为第五种运输方式。他解释说："我们有飞机，火车，汽车和轮船。如果有第五种模式呢？我给它起了个名字，叫超级管道（Hyperloop）。"

"我构思的这个系统……永远不会坠毁，不受天气影响，其运行速度比子弹头火车快三到四倍……它的平均速度是飞机的两倍。您将在 30 分钟内从洛杉矶市中心到达旧金山市中心。"

乘坐超级管道的人坐在舱中向四周发射，每个舱直径都只有六英尺半，舱会通过陆上或水下的管道进行发射。

超级管道甚至可以全天候运行，价格低廉，并允许人们按自己的时间表旅行。人们可以随时在车站出现，并被迅速送上旅途。

另外，马斯克认为，超级管道可能完全由太阳能驱动，从而使其比汽车，飞机或火车系统更加环保。有一天，它有可能在不到一个小时的时间内将人们在美国东海岸和西海岸之间互相转移。最终，超级管道能够将人们运送到世界各地。

除了科幻小说家外，马斯克不是第一个幻想出用真空管技术作交通工具的人。这个想法已经存在了一段时间，据报道，包括中国在内的其他国家的发明者也在研究类似技术。

## Passage twelve

Many people have looked to the stars and **wondered** what it would be like to take a trip into **outer space. Ever since** the space **program** began, traveling **beyond** Earth has been **a privilege for** a **select** few, namely, astronauts. **The rest of** us have had to **imagine** what it would be like, but that may soon change.

Those who favor expanding space exploration feel that it is time to **go beyond** the **government-funded** National Aeronautics and Space Administration(NASA) program and to create opportunities for **individuals** and businesses to **explore** outer space. Imagine privately **financed** research outposts in space, **missions** to Mars, and **mining** operations on the Moon. The space **frontier** could **indeed** be the next gold rush!

Imagine what it would be like to travel in space. Those who have been lucky enough to visit space have all called it an amazing experience. The view of Earth and the stars must be **spectacular**, and the experience of living in"zero **gravity** "would be **fascinating.** The first American woman to visit space, Sally Ride, said that it was the greatest fun of her life. Imagine the **thrill** of booking a flight for a weekend **stay** (or longer )at a space hotel. It **turns out** that a space hotel would be much easier to design and build than the International Space Station; early **estimates** of the cost to build the hotels **indicate** that they would be less **expensive** if the orbiting hotels were built to **accommodate** large numbers of space travelers.

The space hotel and the other projects businesses might **think up** would **allow** people to see what is happening in space with their own eyes. That may **lead to** more support of NASA and its space research and greater **appreciation** of the funding that the space program now receives.

Those who **oppose** expanding space exploration **argue** that the costs are **overwhelming** and **unrealistic.** They point to the billions of dollars that would have to be **raised** through consumers or corporate sponsorship. **In addition**, civilian space travel is potentially dangerous, and there are many **unknown** risks **Involved**.

Who would **determine** the safety of commercial orbiting vehicles, and how would they be **insured**? Issues like this **require** time for discussion among groups from many different businesses. Companies that **specialize in** manufacturing, travel, marketing, insurance, law and finance would all have to **be involved**.

Others **believe** there are simply **too** many unanswered questions **to** put civilians in space any time soon.There are also those who question **investing in** space exploration when there are **widespread** problems like **poverty** and disease that need to be **addressed** on Earth. For these people, **commercial** space travel will **remain** science fiction, **at least** for many years to come.

【参考译文】

很多人都曾仰望星空，想象着如果能到外太空旅游会是什么光景。自从太空项目开始，去地球以外的地方旅游已经成为了精选出来的少数人—宇航员的特权。但是，我们其他人只能去期待宇宙光景的形式可能要有所转变了。

那些赞同扩大太空探索的人认为，是时候越过政府资助的国家航空航天局（NASA）计划，为个人或者企业能够去探索外太空创造机会了。想象一下私人资助的太空研究前哨站、火星任务和月球采矿作业。太空前沿可能真的是下一个“淘金热”！

想象一下在太空旅行是什么样子。那些有幸访问过太空的人都称这是一次

奇妙的经历。地球和星星的景色一定很壮观，生活在“零重力”下的体验一定很迷人。第一位访问太空的美国女性萨利·赖得说，这是她一生中最大的乐趣。想象一下预订航班在太空旅馆度过周末(或更长时间)的激动心情。事实证明，太空旅馆的设计和建造要比国际空间站容易得多；建造这些旅馆的早期估算成本表明，如果建造轨道旅馆是来容纳大量的太空旅行者，那价格会更低。

太空旅馆和其他企业可能想到的项目将允许人们亲眼看到太空中正在发生的事情。这可能会使美国宇航局及其太空研究得到更多的支持，以及对太空项目目前获得资金的极大理解。

那些反对扩大太空探索的人认为，太空探索的成本巨大，而且不切实际，他们指出，数十亿美元将不得不通过消费者或企业赞助筹集。此外，民用太空旅行具有潜在的危险，其中涉及许多未知的风险。

谁将决定商业轨道飞行器的安全性，如何保证?像这样的问题需要不同行业的小组之间花时间讨论。专攻制造、旅游、营销、保险、法律和金融的公司都必须参与其中。

另一些人则认为，有太多悬而未决的问题，短期内无法将平民送入太空。还有一些人对在太空探索上投资提出质疑，因为在地球上存在着贫困和疾病等需要解决的普遍问题。至少在未来的许多年，对这些人来说，商业太空旅行将仍然是科幻小说。

## Passage thirteen

Alice Paul Tapper was on a fourth-grade **field trip** last year when she **noticed** something that **bothered** her. The girls were standing in the back of the room, listening **politely** as the **guide** spoke. The boys **crowded** together **in the front.** They **raised their hands** to **respond to questions**, **even if** they didn't know the answer.

Alice, 10, often doesn't raise her hand in class, even if she's **pretty** sure she knows the answer. She's **nervous** she'll get it wrong and feel **embarrassed**. On that field trip, she **figured** a lot of other girls were probably keeping quiet, too.

Alice told her mom what she saw. They **talked about** how girls are often told to be quiet and **polite**, while boys are **encouraged** to be **bold** and **assertive**. Alice and her mom talk about that kind of thing a lot. She wants boys and girls to have the same opportunities. "Girls are important, and their ideas are important," Alice says. "They should be heard. "

Alice's mom is the leader of Alice's Girl Scout troop， in Washington, D.C. She and Alice **brought** the issue **up** at their next Girl Scout meeting. Alice found she was right. The other girls said they, too, sometimes **hesitated to** raise their hands, and they worried that this could **hold** them **back** in life. Alice wanted to change that. If a girl raises her hand, it's one step toward becoming a great leader, " she says.

Alice's troop decided to ask the Girl Scouts organization to create a new patch. The new patch was **introduced** in October 2017. It is called the Raise Your Hand patch. To earn it, a girl has to do three things. She must **pledge to** raise her hand in class when she thinks she knows the answer--even if she's not 100% sure. She must **recruit** three girls to make the same pledge. And she must talk about how raising her hand makes her feel.

So far, more than 5,400 girls have earned the Raise Your Hand patch. They live

in every state in the U.S., plus Canada, the United Kingdom, Australia, and Ireland. "Girls are powerful," Alice says. "They should raise their hands so they can **release** the power inside them."

去年，爱丽丝·保罗·塔珀参加了一次四年级野外旅行的活动，也就在那时，她发现有些事困扰着她。在导游发言时，女生们都站在房间后面安静地听着，而男生们都挤在前面，即使不知道答案，他们举手积极回答问题。

10 岁的爱丽丝即使十分确定自己的答案，在课堂上也不经常举手。因为她感到紧张，担心出错，并为此感到尴尬。在那次实地考察中，她觉得其他女生也很可能跟她一样保持安静。

爱丽丝告诉了妈妈自己看到的情况。她们聊到，女生经常被要求要文静，要礼貌，然而男生却被鼓励要大胆和坚定。爱丽丝和妈妈就这件事聊了很多。爱丽丝想要男生与女生都有同样的机会。爱丽丝说："女孩很重要，她们的想法也很重要，人们应该要听听女生的想法。"

爱丽丝的妈妈是华盛顿地区爱丽丝所在女童子军的领队。她和爱丽丝在之后的女童子军会议上提出了这件事。爱丽丝发现她是对的。其他女孩说他们也有时会犹豫着举手，她们担心这样做会使她们在生活中变得畏缩不前。爱丽丝想改变这种状况。"假如女生举手了，那她就在成为伟大的领导者的道路上迈进了一步。"她说道。

爱丽丝的团队决定请求女童子军组织创建一个新的徽章。该徽章在 2017 年 10 月推出，叫"举手" 徽章。为了获得该徽章，女生们需要做三件事。一是当她知道答案，即使不能百分之百地确定，她必须保证在班上举手。二是她必须招募三位女生做出同样的承诺。三是她必须说出她举手时的感受。

到目前为止，已有 5400 多名女生获得了"举手" 徽章。她们来自于美国的各个州，还有的来自加拿大、英国、澳大利亚和爱尔兰。"女生们非常强大，" 爱丽丝说。"她们应该举起她们的手，这样才能释放出她们内在的力量。"

## Passage fourteen

**Under the right circumstances,** choosing to spend time alone can be a huge psychological **blessing**. In the 1980s, the Italian journalist and author Tiziano Terzani, after many years of reporting across Asia, holed himself up in a cabin in Ibaraki Prefecture, Japan. "For a month I had no one to talk to **except** my dog Baoli," he wrote in his book A Fortune Teller Told Me. Terzani **passed the time** with books, **observing** nature, "listening to the winds in the trees, watching butterflies, enjoying silence." For the first time in a long while he felt free from the unending anxieties of daily life: "At last I had time to have time."

Terzani's **embrace** of **isolation** was relatively unusual: humans have long considered **solitude** an inconvenience, something to avoid, a punishment, a realm of loners. Science has often **associated** it **with** negative outcomes. Freud, who **linked** solitude **with** anxiety, **noted** that, "in children the first fears **relating to** situations are those of darkness and solitude." John Cacioppo, a modern social neuro-scientist who

has extensively studied loneliness—what he calls "chronic perceived isolation"—**contend**s that, beyond damaging our thinking powers, isolation can even harm our physical health. But increasingly scientists are approaching solitude as something that, when pursued by choice, can prove a therapy.

This is especially true in times of personal **disorder**, when the **instinct** is often for people to reach outside of themselves for support. "When people are experiencing crisis it's not always just about you: It's about how you are in society," **explains** Jack Fong, a sociologist at California State Polytechnic University who has studied solitude.

**In other words**, when people **remove** themselves **from** the social context of their lives, they are better able to see how they're **shaped** by that context. Thomas Merton, a monk and writer who spent years alone, held a similar notion. "We cannot see things in **perspective** until we cease to hug them to our breast," he writes in *Thoughts in Solitude*. "People can go for a walk or listen to music and feel that they are deeply in touch with themselves."

**【参考译文】**

在适当的情况下，选择独处对我们的心理健康大有好处。上世纪 80 年代，意大利记者兼作家帝奇亚诺·坦尚尼在亚洲各地做了多年报道后，躲进了日本茨城县的一间小木屋里。"一个月的时间里，除了我的狗保利，没人可以交流。"他在《算命先生告诉我》一书中写道。坦尚尼与书为伴，消磨时光，观察着大自然，"听着林中的风，看着蝴蝶，享受着安静。"很长一段时间以来，他第一次觉得摆脱了日常生活中无休止的焦虑："我终于有时间去享受时光了。"

坦尚尼对独处的接纳是相当不寻常的：人类长期以来一直认为孤独是一种不便，是应避免的东西，是一种惩罚，是孤独者的王国。科学经常将其与消极后果联系在一起。弗洛伊德将孤独与焦虑联系在一起，指出："儿童最初的恐惧都与那些黑暗和孤独的情境有关。"约翰·卡乔波是一位现代神经学家，他对孤独进行了广泛的研究——他称之为"慢性可感知孤立"——他认为，除了破坏我们的思维能力之外，孤独甚至会损害我们的身体健康。但是越来越多的科学家提出，如果人们主动选择独处的话， 孤独反而可以成为一种疗法。

尤其是在个人情绪紊乱，本能地向外界去寻求帮助的时候，情况更是如此。加州理工大学研究孤独的社会学家杰克·方解释说："当人们经历危机时，并不总是你的问题：而是有关你在社会中表现的问题。"

换言之，当人们从其生活的社会环境中脱离出来时，他们就能更好地看到他们是如何被这种环境所塑造的。僧侣兼作家托马斯·默顿独自度过了数年的时间，他也有类似的想法。他在《独处中的沉思》中写道："除非我们拥抱事物，否则我们无法真正看清它们。人们可以去散步或听音乐，体会自己内心深处的个人感触。"

## Passage fifteen

What did you study at university? If it was something along the lines of law or business, you might want to look away now. That's because **according to** new research, which has found a **link** between our university subjects and our personalities, you have **selfish**, uncooperative tendencies and are not very **in touch with** your feelings. **On the plus side**, you're probably the life and soul of a party, the findings

suggest.

Researchers analyzed data from more than 13,000 university students who **were involved in** 12 separate studies. From this, they **discovered** a **correlation** between the "Big Five" major **personality** traits and the subjects they were enrolled on.

For example, those studying law, economics, political science and medicine tended to be much more **outgoing** than those taking other subjects, the study found. But when it came to "agreeableness"—the **tendency** towards being helpful, generous and considerate—the lawyers scored particularly low, as did business and economics students.

Arts and humanities students, as well as those studying psychology and politics scored highly for openness, meaning they were curious, imaginative and in touch with their inner feelings, while economists, engineers, lawyers and scientists scored comparatively low. However, the arts and humanities students also **tended to** be less **conscientious** and more nervous, typically exhibiting signs of anxiety and moodiness. Psychology students were not far behind arts and humanities students for these traits.

Study author Anna Vedel, from the University of Aarhus in Denmark, said she was surprised by the results. "The effect sizes show that the differences found are not **trivial, far from**," she said. "On the more humorous side they do confirm our more or less prejudicial stereotypes of the **disturbed** psychologist, the withdrawn natural scientist, the cynical economist."

And she said that the findings could help those school pupils who currently **have no idea** what to study at university, as well as helping academics to plan their lectures. "I'm not arguing that these results should **play a major role in** either guidance or selection, but it might provide some **inspiration** for students that are **in doubt** about study choices and want to **make a choice based on** more than abilities, for example," said Dr Vedel. "Or teachers might better understand their student population."

**【参考译文】**

你在大学学习的是什么专业？如果是和法律或者商科相关的专业，你大概想把目光移开了。因为最新研究显示，专业与我们的个性之间具有一定的联系。学习法律或者商科的你可能有自私不合作的倾向，而且难有感同身受的体会。调查显示，从积极的一方面说，你又可能是社交场合的活跃分子。

研究人员对来自12个不同专业的13000多名大学生进行了研究分析。通过分析他们发现，"五大"类人格特征与学生所学的专业之间存在一定联系。

举例来说，研究发现，学习法律、经济、政治学和医学的学生要比学习其他学科的学生性格更加外向。但说道"亲切感"，即从乐于助人、慷慨和体贴的性格倾向来看，法学生的得分尤其低，商科和经济学学生也是如此。

艺术学与人文学的学生，同那些学习心理学和政治学的学生一样，在开放性方面得分较高。这意味着他们好奇心强、想象丰富，并且善于表达自我情感。相比之下，学习经济、工程、法律和科学的学生在开放性上得分较低。然而，艺术学与人文学的学生严谨性低，更容易紧张，典型的表现是焦虑不安与喜怒无常。在这些特质上，心理学学生和艺术、人文专业的学生相差无几。

此项研究的作者安娜·韦德尔来自丹麦奥尔胡斯大学，她表示对这次的研究发现感到吃惊。她表示："通过效应量的计算我们发现，研究所发现的差异并不是微不足道的。有趣的是，这些不同也证实了我们对不同专业那些或多或少的偏

见，比如焦虑不安的心理学家、沉默寡言的自然科学家以及见利忘义的经济学家。”

但同时她也认为这次的研究发现可以帮助那些对专业拿不定主意的学生做出选择，也可以帮助老师合理安排自己的课程。“我并不是说这个研究结果对于指导和选择发挥重要作用，但它对于有专业选择困难症，或者不想只根据能力来选择专业的学生来说，确实有着启发的作用。”韦德尔博士表示。“老师也可以有更好的机会来了解学生。”

## Passage sixteen

Sometimes a race is not enough. Sometimes a runner just wants to go further. That’s what **happened to** Dennis Martin and Brooke Curran.

Martin, 68, a retired detective form New York City, **took up** running after his first wife died. Curran, 46, a philanthropist (慈善家) from Alexandria, started running to get out of the house and **collect** her thoughts. Both she and Martin got good at running but felt the **desire** to do more. “The more I trained, the better I got,” Curran said,” but I would cross the finish line with no sense of **accomplishment**.”

**Eventually**, they worked up to running marathons (马拉松) (and longer races) in other countries, on other **continents**. Now both have achieved a notable -and increasingly less rate- milestone; running the 26.2-mile race on all seven continents.

They are part of a phenomenon that has grown out of the running culture in the past two decades, at the intersection of athleticism and leisure: “runcations,” which **combine** distance running **with** travel to exotic places. These trips, as expensive as they are physically challenging, are a **growing** and **competitive** market in the travel industry.

“**In the beginning,** running was enough,” said Steen Albrechtsen, a press manager. “The classic marathon was the **ultimate** goal, then came the super marathons, like London and New York. But when 90,000 people a year can take that challenge, it is no longer exciting and **adventurous** .Hence, the search for new adventures began.”

“No one could ever have imagined that running would become the lifestyle activity that it is today,” said Thom Gilligan, founder and president of Boston-based Marathon Tours and Travel. Gilligan, who has been in business since 1979, **is** partly **responsible for** the seven-continent phenomenon.

It **started with** a casual talk to an interviewer about his company offering trips to every continent except Antarctica. And then in 1995, Marathon tours **hosted** its first Antarctica Marathon on King George Island. Off the tip of the Antarctic Peninsula; 160 runners got to the starting line of a dirt-and ice-trail route via a Russian icebreaker through the Drake Passage.

【参考译文】

有时候，一场赛跑比赛是不够的。有时，赛跑者只是想要更进一步。丹尼斯·马丁和布鲁克·科伦就是这样的。

68 岁的马丁是一位来自纽约市退休的侦探，他开始跑步是在他第一任妻子去世之后。而 46 岁的科伦是一位来自亚历山大的慈善家，她开始跑步是为了走

出家门理清思绪。她和马丁都擅长跑步，但是希望自己能做的更多。她说：“训练越多，跑的状态越好，但是当我穿过终点线时缺少了那种成就感。”

最终，他们逐渐地在其他洲的其他国家跑马拉松(和更长的比赛)。现在两个人都名声斐然，他们两个的里程碑事件是在七大洲都参加过 26.2 英里的赛跑。

在过去的 20 年中,一种介于运动竞赛和娱乐放松之间的“跑步度假”把远距离长跑和异地旅行结合了起来，它是由跑步文化发展而来的一部分。这种花费昂贵并且对身体素质要求很高旅行是一个不断增长和竞争激烈的市场。

斯蒂恩·阿尔布雷克特森，是一名出版经理，说到：“一开始，跑步就足够了”。“像伦敦和纽约一样，经典马拉松是终极目标，然后才是超级马拉松。但是当每年有 90,000 人能够挑战，它也不再是使人感到兴奋和惊险。因此，寻求新的冒险开始了。”

汤姆·吉利根，是波士顿的马拉松巡回赛和旅行公司的创始人和总裁，表示：“没有人能够想象到跑步会成为今天的一种生活方式 ”。汤姆·吉利根自 1979 年以来就一直从事这项业务，在一定程度上，促成了这项风靡七大洲运动。

它开始于和一位采访者的偶然谈话中，谈话是关于他们公司提供除南美洲之外的其它各大洲的旅行。然后在 1995 年，马拉松巡回赛协会在乔治王岛举办了第一次南极马拉松比赛。在南极半岛顶端，160 名选手乘坐俄罗斯破冰船穿过德雷克海峡到了一个污迹和冰迹混合的起跑线上。

## Passage seventeen

Last week, I read a story about a 34-year-old British woman who **is** extremely **afraid of** metal forks. She’s been using plastic ones for 17 years because the sound of a fork rubbing against a plate gives her a **panic** attack.

Strange, right? But she’s not alone. While popular phobias(恐惧症) about snakes and spiders might get all of the attention, there are a wide **variety** of not-so-obvious horrors that make people nervous.

While some phobias might seem a bit silly, they can cause serious emotional **distress**. My co-worker Magda **is terrified of** pigeons, a phobia that is **taking over** her life. She won’t walk in certain parts of the city and runs screaming from the subway when one of these “rats with wings” finds its way onto the platform. Another friend is disgusted with cheese. Once I saw her run away from a slice of it. So where does an irrational fear of cheese come from?

Are phobias something we inherit from our genes or do we acquire these unusual anxieties over time?

Ever since I can remember I have been unreasonably **frightened** of elevators. There was no terrible childhood experience and I am fine with confined spaces, but something about elevators makes me **nervous.** And so, when my boyfriend and I found ourselves trapped in an elevator last year - because these sorts of things always happen eventually- I was anticipating the worst.

While he gave me a **suggestive** eyebrow raise and proposed we “take advantage of the situation,” I began screaming uncontrollably. I was far from turned on by the whole facing my worst nightmare thing.

However, after the fear subsided(消退)I realized that, yes, this was my greatest fear come true, and yet - it wasn't all that bad. Nervous and inconvenient maybe, but terrifying? Not so much.

**Liberating** yourself from a deep-seated phobia can be a long and difficult process, but sometimes it can be as simple as confronting it head on.

**【参考译文】**

上周，我看了一个故事，说一个 34 岁的英国妇女对于金属叉子极度恐惧，她 17 年来一直使用塑料叉子，因为金属叉子与盘子摩擦的声音让她感到恐惧。

很奇怪，不是吗？但无独有偶。对蛇和蜘蛛的恐惧症可能得到广泛的关注，然而，有很多并不是那么明显可怕的事物也能使人们感到紧张。

虽然有些恐惧看起来很愚蠢，但却能引起严重的精神损害。我的同事玛格达对鸽子很恐怖，这个恐惧症正困扰着她的生活。她不能在城市的某些地方散步，如果她看到落在站台上的这种"带翅膀的老鼠"也会尖叫着从地铁跑开。另外一个朋友是看到芝士就恶心， 一次， 她仅仅看到一小片芝士，就跑开了！因此，这种对于芝士毫无理由的恐惧是从哪里来的呢？

恐惧症是我们从基因里继承而来的,还是我们随着时间的推移产生了这些不寻常的焦虑呢?

从我开始记事，就对电梯有一种的无端的恐惧。在童年时期没有糟糕的经历，对于密闭空间感觉也还好。但是和电梯有关的一些事情却让我紧张。因此，当去年，有一次我和男朋友被关在了电梯里，因为这种事情最终总是会发生，我预测了最坏的结果。

他暗示性的向我挑了下眉毛，建议说："何不让我们好好抓住这机会"。我开始不能自控地尖叫起来，当面对经常在我噩梦中出现的事情时，我没有一点兴趣。

然而，当恐惧退去的时候，我意识到，当我最恐惧的事情到来的时候，并没有像我想象的那么糟糕，也许只是带来了一些紧张和不便，至于恐惧，也不是那么强烈。

把自己从一个根深蒂固的恐惧中解放出来，也许是个漫长而艰难的过程，但也可以简单到当它到来的时候，直接去面对它。

## Passage eighteen

Five or six years ago, I **attended** a lecture on the science of attention. A philosopher who **conducts** research in the medical school was talking about attention blindness, the basic feature of the human brain that, when we **concentrate** intensely **on** one task, causes us to miss just about everything else. Because we can't see what we can't see, our lecturer was **determined** to catch us in the act. He had us watch a video of six people tossing basketballs back and forth, three in white shirts and three in black, and our task was to keep track only of the tosses among the people in white. The tape rolled, and everyone began counting.

Everyone **except** me, I'm dyslexic, and the moment I saw that **grainy** tape with the confusing basketball tossers, I knew I wouldn't be able to **keep track of** their movements, so I let my mind **wander.** My **curiosity** was **aroused**, though, when about 30 seconds into the tape, a gorilla (大猩猩)came in among the players. She (we later learned a female student was in the gorilla suit) **stared** at the camera, thumped

her chest, and then **strode away** while they continued passing the balls.

When the tape stopped, the philosopher asked how many people had counted at least a dozen basketball tosses. Hands went up all over. He then asked who had counted 13, 14, and congratulated those who'd scored the perfect 15. Then he asked, "And who saw the gorilla?"

I **raised** my hand and was surprised to discover I was the only person at my table and one of only three or four in the large room to do so. He'd set us up trapping us in our own attention blind- ness. Yes, there had been a **trick**, but he wasn't the one who had **played it on** us. By concentrating so hard on counting, we had **managed to** miss the gorilla in the midst.

**【参考译文】**

五六年以前，我听过一次关于注意力**科学**的讲座。在医学院从事研究工作的一位学者，在演讲中谈论到注意力盲区的问题，这是人类大脑的基本特征，当我们全力集中于一项任务时，我们往往会忽略掉其它几乎所有的事情。因为我们无法注意到我们不去看的东西，演讲者决定当场实验一次。他让我们看一段视频，视频中有 6 个人在来回不断地投篮球，其中 3 人身穿白色衬衣，另外 3 人身穿黑色衬衣。分配给我们的任务是只关注于身穿白色衣服的人投球的情况。录像开始播放，大家开始计数。

每个人都在计数，除了我之外。我有阅读障碍，一看到带有条纹的录像伴随着那令人晕头转向的投篮球的人，我就知道我无法跟上他们的节奏，于是我的注意力分散了。但是在录像播放了约 30 秒钟时，一只大猩猩出现在投球的人员当中，这激发了我的好奇心。她（我们事后才知道是一位女学生穿着大猩猩毛色的服装扮演的）盯着摄相机镜头，用力捶打自己的胸脯，然后大步走开了。与此同时，投球的人还在继续传球。

当录像停止转动时，学者问大家有多少计数出至少 12 下传球。大家都举起了手。他接着又问谁数到了 13 下、14 下，并祝贺那些数出准确数字 15 下的人。然后，他又问到："有谁看到了大猩猩？"

我举起了手，并惊讶地发现我是我们那一桌人当中唯一举手的人，整个房间里注意到大猩猩的只有三四个人，我是当中一个。学者给我们设了一个圈套，诱使我们陷入自己的注意力盲区。确实，这是一个把戏，但他不是那个对我们耍把戏的人。由于全神贯注于计数，我们就会错过当中出现的大猩猩。

## Passage nineteen

If you've ever hosted a mouse as a house guest, you know they can be incredibly clever at finding your food. **And that makes sense.**

"They had to become better in traits like problem solving because we became better at hiding our food from them."

Anja Guenther is with the Max Planck Institute in Germany. She says that battle of the minds has made mice craftier over time.

"The longer the mice lived with humans, the better they are at problem-solving."

You see, there are more than a dozen subspecies of house mice worldwide. And each began cohabitating with humans at different times in our evolutionary history. For example ...

“Mus musculus domesticus.”

It began raiding human pantries around 12,000 years ago.

“Mus musculus musculus.”

Our relationship with them began some 8,000 years ago.

“And Mus musculus castaneus.”

It’s a relative newcomer who began cohabitating only 3,000 to 5,000 years ago.

And that spread in evolutionary life histories, with constituents from all three groups, gave Guenther’s team an opportunity. They gathered 150 mice—representing all three groups—and tested them with seven different food puzzles. Each puzzle was baited with a mealworm, which the mice could only get by pushing or pulling a lid, for example, or extracting a ball of paper from a tube or opening the window of a Lego house.

And they found that the longer a mouse variety had lived with humans, the more likely it was to solve these food puzzles.

“So, basically, what we are left at, with trying to explain these results that we see, is that the mice really developed higher enhanced cognitive abilities while living with humans.”

The results appear in the *Proceedings of the Royal Society B*.

As the human footprint on the globe expands, Guenther says it’s more important than ever to understand how we influence animal minds to learn why some creatures, like house mice, adapt—while others simply die out.

如果家里曾经有老鼠作客，你就会知道老鼠在寻找食物方面真是多么出色。这是有道理的。

“它们必须在解决问题方面变得更好，因为我们越来越擅长藏食物。”

安雅·冈瑟就职于德国马克斯·普朗克研究所。她说，随着时间的推移，心智之战让老鼠变得更加狡猾。

“老鼠和人类生活的时间越长，它们解决问题的能力就越强。”

你看，世界上有十几种家鼠亚种。它们都在人类进化史的不同时期与人类共存。例如.....　“西欧家鼠。”

大约在 12000 年前，它开始袭击人类的食品储藏室。

“小白鼠。”

我们与它们的关系始于约 8000 年前。

“还有花栗鼠。”

相对而言，这是一个新来者，在 3000 到 5000 年前，才开始与人类共存。

在生命进化的历史中，这一基因的传播包含了所有三个群体的成分，给了冈瑟的团队一个机会。他们收集了 150 只老鼠(代表所有 3 组鼠种)，用 7 种不同的食物谜题进行测试。每个谜题都用粉虫作为诱饵，老鼠只能通推或拉盖子，或者，从管子里出纸团或打开乐高房子的窗户来获得粉虫。

他们发现，老鼠和人类生活的时间越长，就越有可能解决这些食物难题。

“所以，基本上，解释我们所看到的结果就是，老鼠和人类在一起生活时，确实发展出了更高的认知能力。”

这项研究结果发表在《英国皇家学会学报 B》上。

冈瑟说，随着人类在地球上的足迹不断扩张，了解我们人类如何影响动物的思维，了解为什么有的生物如家鼠适应了环境，而他一些生物直接灭绝，这比以往任何时候都重要。

## Passage twenty

Today's grandparents are joining their grandchildren on social media, but the different generations' online habits couldn't be more different. The over-55s are joining Facebook in increasing numbers, meaning that they will soon be the site's second biggest user group, with 3.5 million users aged 55–64 and 2.9 million over-65s.

Sheila, aged 59, says, “I joined to see what my grandchildren are doing, as my daughter posts videos and photos of them. It's a much better way to see what they're doing than waiting for letters and photos in the post. That's how we did it when I was a child, but I think I'm lucky. I get to see so much more of their lives than my grandparents did.”

Ironically, Sheila's grandchildren are less likely to use Facebook themselves. Children under 17 are leaving the site – only 2.2 million users are under 17 – but they're not going far from their smartphones. Chloe, aged 15, even sleeps with her phone. “It's my alarm clock so I have to,” she says. “I look at it before I go to sleep and as soon as I wake up.”

Unlike her grandmother's generation, Chloe's age group is spending so much time on their phones at home that they are missing out on spending time with their friends in real life. Sheila, on the other hand, has made contact with old friends from school she hasn't heard from in forty years. “We use Facebook to arrange to meet all over the country,” she says. “It's changed my social life completely.”

Teenagers might have their parents to thank for their smartphone and social media addiction as their parents were the early adopters of the smartphone. Peter, 38 and father of two teenagers, reports that he used to be on his phone or laptop constantly. “I was always connected and I felt like I was always working,” he says. “How could I tell my kids to get off their phones if I was always in front of a screen myself?” So, in the evenings and at weekends, he takes his SIM card out of his smartphone and puts it into an old-style mobile phone that can only make calls and send text messages. “I'm not completely cut off from the world in case of emergencies, but the important thing is I'm setting a better example to my kids and spending more quality time with them.”

Is it only a matter of time until the generation above and below Peter catches up with the new trend for a less digital life?

如今的祖父母们也在社交媒体上加入了孙辈们的行列，但是不同年代的人上网的习惯有天壤之别。越来越多 55 岁以上的人加入脸书，用户年龄在 55 到 64 岁有 350 万，超过 65 岁的有 290 万，这意味着他们很快将成为网站的第二大用户群。

希拉今年 59 岁了，她说:“我上脸书是想看我的外孙们在做些什么，因为我女儿会上传他们的视频和照片。通过这样的方式来了解他们做什么，比等他们通过邮局寄来的信和照片好多了。我小时候就是通过邮局，但我觉得我很幸运，我能比我的祖父母看到孩子们更多的生活。”

讽刺的是，希拉的外孙们自己不怎么使用脸书。17 岁以下的孩子们正在远离脸书，年龄在 17 岁以下的用户只有 220 万。但是他们没有脱离智能手机。15 岁的克洛伊，甚至睡觉都要带着手机。她说:“手机是我的闹钟，所以我不得不这样做。睡觉前和早上一睁眼，我都要看。”

跟她的祖母辈不同，克洛伊的同龄人花了太多时间在家玩手机，所以他们错过了现实生活中跟朋友一起的时光。另一方面，希拉与她 40 年没有联络的大学好友们取得了联系。“我们通过脸书安排在全国各地的见面，她说，“它完全改变了我的社交方式。”

年轻人对智能手机和社交媒体的过度依赖也许要归咎于他们的父母，因为他们的父母是最早的智能手机使用者。彼得，38 岁，两个孩子都十来岁了。他说他过去手机或笔记本电脑都不离手。“我一直在线，感觉永远在工作，”他说，“如果我自己总是在屏前，怎么能让孩子们远离手机呢?”所以，在晚上和周末，他把 SIM 卡从智能手机拿出来放进只能打电话和发信息的老式手机上。“我不会完全与世界隔绝，以防一些突发事件的发生，但重要的是我为孩子们树立了一个好的榜样，花更多的时间和他们在一起。

让彼得的上一代和下一代紧跟新潮流，过上较少数字化的生活，只是时间问题吗?

## Passage twenty-one

In February 2019, The Kaiser Permanent health system announced a new kind of medical school. The school would be built "from the ground up" to prepare students for the complexities of the U. S. medical system. The curriculum would emphasize cultural competency, patient and provider well-being, mental health and the elimination of socioeconomic disparities in the medical system.

Students would see patients right away, and hands-on learning would replace many lectures.What's more, the first five graduating classes would pay nothing to attend; Kaiser hoped this would attract students more diverse than the typical U. S. medical school's. "The school will help shape the future of medical education, said Kaiser CEO Bernard J. Tyson, who died unexpectedly of a heart attack, about nine months after the announcement.

That future felt a good deal **more urgent** by the time the Kaiser Permanent Bernard J. Tyson School of Medicine opened its doors in Pasadena, Calif. , in July 2020. The COVID-19 pandemic had put almost every facet of normal life on hold, and the medical system was scrambling to treat millions of patients with a new and terrifying disease, the majority of them black and brown.The streets were filled with people protesting police brutality and racism, as a nation that had long overslept awoke to the disparities woven into almost every American institution. "Our country doesn't just have a pandemic. It also has a renewed recognition of centuries of

racism,"says Kaiser's founding dean Dr Mark Schuster. "We need to make sure that our students understand our history.

Kaiser isn't alone there, of course. Medical schools all over the world have had to adjust on the fly, in ways both practical and ideological. First, schools had to figure out how to remotely train students in skills taught hands-on before lockdowns. Then, in the U. S., schools were also forced to grapple with their roles in a health care system that often fails to keep Black and brown patients well. That meant learning how to produce doctors who could help chip away at those disparities moving forward. With no warning and no instruction manual, medical schools are figuring out how to train a generation of postpandemic doctors for a world still taking shape.

2019 年 2 月，恺撒永久医疗系统宣布了一种新型医学院。这所学校将“从头开始”建设，培养学生应对美国医疗系统的复杂性做好准备。课程将侧重文化能力，病人和提供者的福祉，心理健康和消除医疗系统中的社会经济差距。

学生们可以马上见到病人，实践学习将取代听取讲座。更重要的是，前五届的毕业班不需要支付任何费用，恺撒希望这能比典型的美国医学院吸引更多样化的学生群体。“这所学校将帮助塑造医学教育的未来，”恺撒集团首席执行官伯纳德·J·泰森说。据报道，泰森在宣布这一消息的 9 个月后心脏病发作，意外死亡。

当恺撒永久医疗机构伯纳德·J·泰森医学院于 2020 年 7 月在加利福尼亚州帕萨迪纳市开学时，这种前景显得更加紧迫。新冠肺炎几乎让正常生活的方方面面都入了停滞，医疗系统正忙于治疗数百万患有一种新的可怕疾病的患者，其中绝大多数是黑人和棕色人种。街头挤满了抗议警察暴行和种族主义的人们，这个长期睡过头的国家发现了几乎每条美国制度中都存在的不等。“我们的国家不仅仅有一场流行病，它重新认识了几个世纪以来的种族主义，”恺撒学院的创始院长马克·舒斯特博士说。“我们需确保我们的学生了解我们的历史。”

当然，恺撒并不是唯一这样做的学校。世界各地的医学院不得不在实践和意识形态方面匆忙进行调整。首先，学校必须解决如何在封锁前远程手把手教学生技能的问题。然后，在美国，学校还被迫努力解决自己在医疗体系中的角色问题，因为医疗体系往往无法让黑人和棕色人种的病人保持健康。这意味着要学习如何培养能够帮助消除这些不平等的医生。在没有警示也没有指导手册的情况下，医学院正在研究如何培养新冠后的一代医生以适应一个仍在重塑中的世界。

# Passage twenty-three

I am starting to worry about the electric car. Not the thing itself; I've found electric vehicles to be superior to their fossil-powered predecessors in just about every important way, and although I am a car-crazy Californian, I don't expect to buy a lung-destroying, pollution-spewing gas car ever again.

But electric motors are merely a power source, not a panacea. From General Motors' Super Bowl ads to President Biden's climate-change plans, plug-in cars are now being cast as a central player in America's response to a warming future—turning a perfectly reasonable technological hope into overblown hype.

The planet will be much better off if we switch to electric cars. But gauzy visions of the guilt-free highways of tomorrow could easily distract us from the larger and more entrenched problem with America's transportation system.

That problem isn't just gas-fueled cars but car-fueled lives-a view of the world in which huge private automobiles are the default methods of getting around. In this way E. V. s represent a very American answer to climate change: To deal with an expensive, dangerous, extremely resource-intensive machine that has helped bring about the destruction of the planet, let's all buy this new version, which runs on a different fuel.

During his time as mayor of South Bend, Ind. Pete Buttigieg, the new secretary of transportation, advocated plans to reduce car dependency. But asking Americans to begin to imagine a future of fewer, smaller cars and less driving will be a great political heave. I can already imagine the Fox News segments pillorying Biden and Mayor Pete for their “war” on S.U.V. s and pickup trucks.

**Comment 1**

When gasoline prices hit $ 200.00 a gallon, we were gonna quit driving and just WALK everywhere.

**Comment 2**

We support and encourage many planet-saving carbon offset projects worldwide. These include forest regeneration and protection activities designed to save the world’s precious natural resources. Your support makes a significant difference in the fight against change and global warming.

**Comment 3:**

An objection to the clean, eco-friendly image of electric cars is the effects of electric car battery pollution. Electric car batteries are composed of various rare earth materials. The extraction, manipulation, and disposal of such materials can contribute to carbon emissions and air and water pollution.

我开始担心电动汽车了。不是电动车本身；我发现电动汽车几乎在所有重要方面都优于其燃油车前辈。尽管我是一个加州汽车狂，但我再也不想买辆损坏肺部、排放污染的汽油车了。

但电动机仅仅是一种动力来源，而不是万灵药。从通用汽车的超级碗广告到拜登总统的气候变化计划，插电式汽车现在正被塑成美国应对气候变暖的核心角色—把一个完全合理的技术希望变成了夸大的炒作。

如果我们改用电动汽车，地球会好得多。但是，对未来没有任何负罪感的高速公路的模糊愿景，可能很容易把我们的注意力从美国交通系统更大、更根深蒂固的问题上转移开。

这个问题不仅仅是汽油车，还有以汽车为燃料的生活—认为大型私家车是默认出行方式的世界观。在种情况下，电动汽车代表了一种非常美国式的应对气候变化的方式:为了应对一种昂贵、危险、极度消耗资源、导致地球毁灭的机器，让我们都买这个使用不同燃料的新版本吧。

在印第安纳州南本德市担任市长期间，新任交通部长皮特·布蒂吉格倡导减少对汽车依赖的计划。但是，让美国人开始去想象一个更少、更小的汽车和更少驾驶的未来，将是一种巨大的政治挑战。我已经可以想象，福克斯新闻的部分会嘲笑拜登和皮特市长对越野车和皮卡的“战争”。

评论 1:

当油价涨到 200 美元一加仑的时候，我们会放弃开车，到哪儿都步行。

评论 2:

我们支持和鼓励全球众多保护地球的碳补偿项目。这类项目包括森林再建和拯救世界珍贵自然资源的保护活动。你的支持对应对气候变化和全球变暖具有重大意义。

评论 3:

对于电动汽车洁净、环保的形象，一个反对意见是电动汽车电池对环境的影响。电动汽车的电池是由各种稀土原料构成的。这些材料的提取、使用和处置都会造成碳排放和对空气、水的污染。

## Passage twenty-four

My five-year-old daughter knew exactly what she wanted for Christmas of 1977, and told me so. Yes, she still would like the pink-and-green plastic umbrella, books, long nightgown, and slippers—fine. But really, there was only one thing that mattered: a Barbie Townhouse, with all the accessories.

This was a surprise. Rebecca was not a Barbie girl, preferred stuffed animals to dolls, and wasn't drawn to play in a structured environment. Always a make-up-the-rules, design-my-own-world, do-it-my-way kid. Maybe, I thought, the point wasn't Barbie but the house, which she could claim for herself, since we'd already moved five times during her brief life.

Next day, I stopped at the mall. The huge Barbie Townhouse box was there: "3 Floors of High Styled Fun! Elevator Can Stop on All Floors!" Some Assembly Required. Uh-oh. My track record for assembling things was miserable. Brooklyn-born, I was raised in apartment buildings in a family that didn't build things. A few years earlier, I'd spent one week assembling a six-foot-tall jungle gym from a kit containing so many parts. I spent the first four hours sorting and the last two hours trying to figure out why there were so many pieces. The day after I finished building it, as if to remind me of my limitations, a tornado (龙卷风) touched down close enough to scatter the jungle gym across an acre of field.

I assembled the Barbie Townhouse on Christmas Eve. Making it level, keeping the columns from looking like they'd melted and been refrozen, and getting that elevator to work were almost more than I could manage. And building it in curse-free silence so my daughter would continue sleeping—if, in fact, she was sleeping—added a layer of challenge. By dawn I was done.

Shortly thereafter, my daughter walked into the living room. Her surprise may not be real, but her delight was utterly genuine and moves me to this day, 34 years later. Rebecca had spurred me to do something. I didn't think I could do. It was for her, and-like so much of the privilege of being her father—it brought me further outside myself and let me overcome doubts about my capacities.

【参考译文】

1977 年，我 5 岁的女儿非常清楚自己圣诞节想要什么，并且告诉了我。是的，她仍然想要粉绿色的塑料伞、几本书、长长的睡袍和拖鞋—这都没问题，但有一件东西让我很头疼—一个装备齐全的芭比王国。她是一个总是喜欢自己制定规则、自我设计、我行我素的女孩。

这确实令人经验，瑞贝卡不喜欢芭比玩具，与洋娃娃相比，更喜欢填充动物娃娃，而且不会在规定好规则的环境中玩耍。关键不在芭比，而是房子，一所属于自己的房子，因为在她短暂的生命中，我们已经搬了 5 次家。

我来到商店，看到那个庞大的芭比王国盒子，上面写着："三层高档玩具，电梯可以停在每一层"。部分零件需要组装。天哪，我组装东西的回忆都是痛苦的。我出生在布鲁克林，从小生活在单元楼里，家人没有自己建造过东西。几年前，我花了一周的时间将零零碎碎的部件组装成六英尺高的攀玩架。其中头四个小时将部件分门别类，再用最后两小时搞清楚为何有这么多部件。就在完成组装的第二天，一阵龙卷风来袭，将攀玩架吹得散落满地，足有一英亩的面积，似乎是在提醒我,自己的组装能力确实不好。

平安夜，我组装了芭比王国。把它放平，不让柱子看起来不像是经热熔冷却后固定的。

但使电梯运作，我几乎很难做到。组装的时候怕吵醒女儿—如果她确实睡着了—还要控制住自己不抱怨不说脏话，这给我又添加了一层压力。天亮的时候才干完。

没一会儿我女儿就走进了起居室。或许她并不是真的感到惊讶,但看她确实非常开心，她那份开心在 34 年后的今天仍然触动着我。瑞贝卡曾鞭策我去做我认为做不到的事情。芭比王国是为她而做的—就像作为父亲的特权一样—让我超越了自己，让我战胜了怀疑自我能力的心理。

## Passage twenty-five

People are living longer than ever, but for some reason, women are living longer than men. A baby boy born in the United States in 2003 can expect to live to be about 73, a baby girl, about 79. This is indeed a wide gap, and no one really knows why it exists. The greater longevity（长寿）of women, however, has been known for centuries. It was, for example, described in the seventeenth century. However, the difference was smaller then—the gap is growing.

A number of reasons have been proposed to accounts for the differences. The gap is greatest in industrialized societies, so it has been suggested that women are less susceptible to work strains that may raise the risk of heart disease and alcoholism. Sociologists also tell us that women are encouraged to be less adventurous than men (and this may be why they are more careful drivers, involved in fewer accidents).

Even smoking has been implicated in the age discrepancy. It was once suggested that working women are more likely to smoke and as more women entered the work force, the age gap would begin to close, because smoking is related to earlier deaths. Now, however, we see more women smoking and they still tend to live longer although their lung cancer rate is climbing sharply.

One puzzling aspect of the problem is that women do not appear to be as healthy as men. That is, they report far more illnesses. But when a man reports an illness, it is more likely to be serious.

Some researchers have suggested that men may die earlier because their health is more strongly related to their emotions. For example, men tend to die sooner after losing a spouse than women do. Men even seem to be more weakened by loss of a job. (Both of these are linked with a marked decrease in the effectiveness of the immune system.) Among men, death follows retirement with an alarming promptness.

Perhaps we are searching for the answers too close to the surface of the problem. Perhaps the answers lie deeper in our biological heritage. After all, the phenomenon is not isolated to humans. Females have the edge among virtually all mammalian (哺乳动物的) species, in that they generally live longer. Furthermore, in many of these species the differences begin at the moment of conception; there are more male miscarriages（流产）. In human, after birth, more baby boys than baby girls die.

【参考译文】

人类比以往更长寿了，但由于某种原因，女性寿命高于男性。2003 年美国出生的男婴预计可以活到 73 岁，而女婴可以活到 79 岁。两性寿命确实差距很大，没有人能说清其中缘由。几个世纪依赖，女性更长寿一直是众所周知的，比如 17 世纪就有这样的记载。但当时的差距比较小，现在差距正扩大。

人们在解释两性寿命差距时，提出了许多原因。在工业化社会中，这种差距最大。因此有人认为，这种差距是由于女性较少受工作压力影响的原因，因为这些工作压力会增大罹患心脏病和酒精中毒的风险。社会学家告诉我们，人们总是劝说女性不要像男性那样冒风险(这或许就解释了女性为何开车时更小心，发生的交通事故更少)。

甚至吸烟也是男女寿命差距大的原因。过去有人认为职业女性吸烟的可能性更大，随着越来越多的女性进入职场，男女寿命差距会缩小，因为吸烟可能导致过早死亡。但我们目前看到吸烟的女人多了，肺癌发病率急剧上升，但女性寿命依旧高于男性。

这个问题令人疑惑的是，女性并不像没有男性健康。也就是说，女性所患的疾病更多，但男性一旦患病，严重程度往往要高于女性。

一些研究者认为，男性可能会先于女性死亡，因为情绪对他们的健康的影响更强烈。例如，鳏夫比寡妇的寿命要短。失去工作时男性甚至会更脆弱。（这两种情况都与免疫力显著下降有关。）男性死亡紧随退休而来，速度之快令人惊恐。

或许我们找出的答案过于表面化。或许答案在于更深刻的生物遗传因素。毕竟，这种现象不止出现在人类中。在绝大多数哺乳动物中，雌性都有这种优势，因为她们的寿命通常更长。而且，对于许多物种而言，雌性的优势从受精之时起就显现出来了：流产的雄性多于雌性。对人类而言，出生后男婴夭折的情况比女婴要多。

## Passage twenty-six

How are you feeling today? I've got a few aches and pains, but nothing serious. However, when things become more critical, 1 would normally book myself an appointment with my doctor-although by the time I get to see him, the problem will have probably gone away. That's because in the UK at least, we usually have to wait a few days before the doctor can fit us in.

Luckily today, technology has come to our rescue. There are thousands of apps available on our smartphones that can offer first aid advice and allow us to self-diagnose our sickness--ranging from a simple cold or flu to some exotic disease. And together with the internet, we have an ocean of medical information at our fingertips.

But is too much knowledge a good thing? By reading up on an illness, we discover its side-effects and what could happen in a worst-case situation. More worrying is that we give ourselves the wrong diagnosis, and then worry ourselves sick that we're going to die. This health anxiety, fueled by the internet, is called "cyberchondria". It gives sufferers a deep fear of diseases and, according to experts, it's on the rise. Professor Peter Tyrer from Imperial College London said, "We find that approximately four out of five of our patients with health anxiety spend literally hours on the internet. One of the first things we do in treatment is to tell them to stop browsing the internet."

A study a few years ago also found many doctors felt intimidated by the increasing numbers of web-wise patients arriving in surgeries. One doctor admitted to not being very happy about patients using the internet, saying: "They all seemed to come to me with things I'd never heard of and very often with things which seem rather bizarre or inappropriate."

Of course there is no doubt, the world wide web has most of the information we need to diagnose our symptoms, but Doctor Tyrer points out, "it doesn't have any judgment associated with it." This is why having a consultation with a doctor face-to-face still has its benefits.

It would seem then that a virtual online doctor can prescribe a dose of useful advice, but technology hasn't replaced the human medical expert just yet.

【参考译文】

你今天感觉如何？我有些酸痛，但不严重。可是，当事情变得更加紧急时，通常我会给自己预约一次医生-尽管等到我去见他时，问题可能已经消失了。那是因为，至少在英国，我们通常需要等待几天才能约到医生。

今天幸运的是，科技来救我们了。我们的智能手机上有成千上万的应用程序，这些应用程序可以提供急救建议并允许我们自我诊断疾病-从简单的感冒或流感到某些外来疾病。与互联网一起，医学信息的海洋让我们触手可及。

但是，太多的知识是件好事吗？通过阅读疾病，我们发现了它的副作用以及在最坏情况下可能发生的情况。更令人担忧的是，我们给自己做出错误的诊断，然后担心自己生病，可能要死了。这种由互联网推动的健康焦虑被称为“网络软骨症”。它使患者对疾病深感恐惧，而且据专家称，这种情况正在增加。伦敦帝国理工学院的彼得·泰勒教授说：“我们发现大约五分之四的人患有这种疾病，花了数小时在互联网上的健康焦虑症患。我们要做的第一件事就是告诉他们停止浏览互联网。”

几年前的一项研究还发现，许多医生被的数量增加的来就诊的网络智慧病患吓到。一位医生承认对使用互联网的患者不是很满意，他说：“他们似乎都是带着我从未听说过的东西来找我的，而且那些东西常常是看上去很奇怪或不合适。”

当然，毫无疑问，万维网具有诊断症状所需的大多数信息，但是 Tyrer 医生指出：“它没有任何与之相关的判断。”这就是为什么要咨询医生面对面仍然有其好处。

这样看来，虚拟的在线医生可以开出一些有用的建议，但是技术尚未取代人类医学专家。

## Passage twenty-seven

As 170 people sat down to dinner, I breathed a sigh of relief: The conference was going well. Running it was part of my job as a university program manager, working on a project to boost biotech collaborations between academia and industry. When I started in the role a few years earlier, I thought that maybe, after years of career exploration, I had finally found the right job for me. But at the conference, I found myself wondering whether that was really what I wanted from my career. I'm a scientist, not an event planner--but I had been too busy organizing the conference to appreciate the research being discussed. Was it time for yet another change?

I started off as a lab scientist, but then discovered that the highly focused nature of lab work wasn't for me. My next job was at a pharmaceutical company -conducting literature searches. I enjoyed the work, which allowed me to stay close to research and interact with a variety of people. But I was only offered a short-term contract , so after a year I had to move on. I then became a scientific journal editor, I loved the breadth of science that I was exposed to, but the job required a lengthy commute. So, I made another dramatic change and moved back to the ivory tower for my current job.

It had become a pattern: I spent a few years in each role only to find that it wasn't quite the right fit. I also realized that maybe I was searching for something that didn’t exist.

I began to think about creative ways to add the scientific stimulation I sought to my work life. With my previous knowledge and my experience as an editor, I realized I had the skill set to do that through freelance science writing, such as news articles for journals and blogs.

With my former colleagues positive responses, I finally decided I could do my university job on a less than full-time schedule. Fortunately my manager agreed.

For the last year, I have been a university program manager/freelance writer, and I've never been happier. Weaving the two roles together has been a bit tricky at times. But I finally feel I have a career that is tailored to my needs. I’ve realized that a career doesn’t need to be off the shelf. Jobs can be mixed and matched to get to one that fits.

【参考译文】

当 170 人坐下来吃饭时，我松了一口气：会议进行得很顺利。作为一名大学项目经理，我的工作之一就是管理这个项目，致力于促进学术界和产业界之间的生物技术合作。几年前，我开始担任这个职务的时候，我想也许经过多年的职业探索，我终于找到了适合我的工作。但在会议上，我发现自己在想，这是不是我

真正想从我的职业中得到的。我是一名科学家，不是一名活动策划者——但我一直忙于组织会议，无暇欣赏正在讨论的研究。是时候做出另一个改变了吗?

一开始，我是一名实验室科学家，但后来发现，实验室高度集中的工作性质并不适合我。我的下一份工作是在一家制药公司做文献检索。我喜欢这份工作，这让我能够密切关注研究,并且可以和各种各样的人相互交流。但我只拿到了一份短期合同，所以一年后我不得不离开。后来我成为了一名科学期刊编辑，我热爱我接触到的广泛的科学，但这份工作需要很长的通勤时间。所以，我做了另一个重大的改变，然后搬回了象牙塔得到了现在的工作。

这已经成为一种模式：我在每个角色上花了几年时间，结果却发现它并不完全适合我。我也意识到，也许我寻找的一些东西并不存在。

我开始思考一些创造性的方法，为我的工作生活增添我所寻求的科学刺激。凭借我之前的知识和编辑经验，我意识到我有能力通过自由科学写作来做到这一点，比如为杂志和博客撰写新闻文章。

在我的前同事的积极回应下，我最终决定，我可以用少于全日制的时间来做我的大学工作。幸运的是，我的经理同意了。

在过去的一年里，我一直是一名大学项目经理，同时也是自由撰稿人，我从未像现在这样快乐过。虽然同时扮演这两个角色有时有点棘手。但我终于觉得我有了一个满足我需要的职业。我已经意识到，职业并不一定是“现成的”。为了得到一份合适的工作,我们可以把多份工作进行混合匹配。

## Passage twenty-eight

Stephen Hawking was born on 8 January. 1942 and grew up in St Albans， the eldest of four brothers and sisters. His father was a research biologist and his mother a medical research secretary, so it was not surprising that he was interested in science. As a student he was drawn to physics and maths as he believed they offered the most fundamental insights into the world. But nothing marked him out as special from his classmates or in his first term at Oxford University.

Stephen got first in Physics from Oxford, and started a PhD at Cambridge. His own private universe expanded when he proposed to his future wife. Jane was also from St Albans , and was a modem languages undergraduate. She had met Hawking at a New Year's party, before his diagnosis. The couple decided to marry quickly, because they did not know how long Stephen bad to live. As Stephen's health deteriorated, he took to walking with stick.

Hawking escaped the limits of his disability by training his mind to work in a new way. As he started to lose the use of his limbs, he developed a way of visualizing problems in his mind to reach a solution instead of by writing equations .Some of his colleagues have suggested that this way of thinking has led to his greatest discoveries. Hawking was now working on one of science's most bizarre ideas-black holes, an extreme prediction of Einstein's general theory of relativity.

Hawking's work on black holes helped prove the idea of a "Big Bang" at the birth of the Universe. Developed in the 1940s, Big Bang theory was still not accepted by all scientists. Working with mathematician Roger Penrose, Hawking realized that

black holes were like the Big Bang in reverse—and that meant the maths he'd used to describe black holes also described the Big Bang. It was a key moment in showing the Big Bang really happened. As his body deteriorated, Hawking's career was taking off.

【参考译文】

斯蒂芬·霍金出生于 1942 年 1 月 8 日，在圣奥尔本斯长大，他在四兄妹中排行老大。他父亲是一位研究生物学家，他母亲在一家医疗研究秘书。可见，霍金对科学感兴趣也不足为奇。在学生时代时，霍金就被物理和数学所吸引。在他看来，物理和数学为他了解世界提供了最基本的见解。但是在牛津大学第一学期，他跟其他同学一样，并没有什么特别之处。

斯蒂芬在牛津大学物理专业以第一名毕业，并开始到剑桥大学读博。当他向未来的妻子求婚时，他的小宇宙开始膨胀。简也是来自圣奥尔本斯，是一名现代语言学的大学生。简在一次新年聚会时认识了霍金，那个时候，霍金还没被诊断出患病。这对情侣决定尽快结婚，因为他们不知道霍金还能活多久。随着霍金的健康每况愈下，他需要拄着拐杖走路了。

为了摆脱身体残疾带来的种种限制，霍金采用一种新的方式来训练思维。当他的四肢无法使用时，他采用了一种新的方式：不再是手写方程式，而是通过大脑把问题视觉化来获得解决方法。他的一些同事认为这种思维方式造就了他巨大的发现。霍金现在正致力于研究科学上最神奇的问题之一—黑洞，这是对爱因斯坦广义相对论的极端预测。

霍金对黑洞的研究证实了宇宙初始“大爆炸”的存在。“大爆炸”理论形成于 20 世纪 40 年代，当时还没有被所有科学家接受。霍金在与数学家罗杰·彭罗斯一起研究时，他意识到黑洞就像反向进行的大爆炸，这就意味着他用来描述黑洞的数学也能描述大爆炸。这对证明大爆炸确实存在是个关键时刻。霍金身体不断恶化，但他的职业生涯开始腾飞。

## Passage twenty-nine

Science is finally beginning to **embrace** animals who were, for a long time, considered second-class citizens.

As Annie Potts of Canterbury University has **noted**, chickens **distinguish** among one hundred chicken faces and **recognize** familiar **individuals** even after months of separations. When given problems to solve, they **reason**: hens trained to pick colored buttons sometimes choose to give up an **immediate** (lesser)food reward for a **slightly** later (and better) one. Healthy hens may **aid** friends, and **mourn** when those friends die.

Pigs **respond** meaningfully **to** human symbols. When a research team led by Candace Croney at Penn State University carried wooden blocks marked with X and O symbols around pigs, only the O carriers **offered** food to the animals. The pigs soon **ignored** the X carriers in favor of the O's. Then the team **switched** from real-life objects to a T-shirts printed with X or O symbols. Still, the pigs ventured only toward the O-shirted people: they had **transferred** their knowledge **to** a two-dimensional format, a not-**inconsiderable** feat of reasoning.

Fairly soon, I came to see that **along with** our closest living relatives, cetaceans(鲸目动物)too are masters of cultural learning, and elephants **express profound** joy and mourning with their social companions. Long-term studies in the wild on these mammals helped to **fuel** a **perspective** shift in our society: the public no longer so easily accepts monkeys made to **undergo** painful procedures in laboratories, elephants forced to perform in circuses, and dolphins kept in small tanks at theme parks.

Over time, though, as I began to **broaden out** even further and **explore** the inner lives of fish, chicken, pigs, goats, and cows, I started to wonder: Will the new science of "food animals" bring an ethical revolution **in terms of** who we eat? **In other words**, will the breadth of our ethic start to **catch up with** the breadth of our science?

Animal activists are already there, of course, **committed to** not eating these animals. But what about the rest of us? Can **paying attention to** the thinking and feeling of these animals **lead** us **to** make change in who we eat?

【参考译文】

科学终于开始接纳那些长期以来被认为是二等公民的动物。

正如坎特伯雷大学的安妮·波茨所指出的那样，即使分离了几个月，小鸡也可以在100只小鸡中分辨并认出熟悉的面孔来。当需要解决问题时，它们会推理：那些接受过选择彩色按钮训练的母鸡有时会选择放弃即刻 (较少)的食物奖励，而选择稍微晚一点(更好)的奖励。健康的母鸡可能帮助朋友，而且当朋友死掉时，它们会感到悲伤。

猪对人类的符号可以做出有意义的反应。宾夕法尼亚州立大学坎迪斯·克劳内领导的研究小组带着有X和O符号的木块围绕在猪的周围，只有携带O符号的研究者才给猪提供食物。猪很快就忽略了带X标记木块的人，转而青睐O标记木块的人。然后，研究小组将木块换成印有X或O符号的T恤衫。尽管如此，这些猪只倾向于T恤上有O符号的人：它们已经把自己的知识转换成二维的形式，这是一种了不起的推理能力。

很快，我认识除了我们的近亲，鲸目动物也是文化学习的大师，而大象会与其同伴一起表达深深的喜悦和悲哀。对这些哺乳动物的长期野外研究有助于我们社会的观念转变：公众不再那么容易接受强迫猴子在实验室里经受痛苦的过程，大象被迫在马戏团里表演以及把海豚关在主题公园里的小水池中。

然而，随着时间的推移，随着我开始进一步扩大并探讨鱼、鸡、猪、山羊和牛的内心生活，我开始想："食用动物"这门新科学是否会给我们的饮食带来一场道德革命?换句话说，我们的道德的广度是否会开始赶上我们的科学的广度?

当然，动物维权人士已经在那里承诺不吃这些动物。但是我们其他人呢?关注这些动物的思想和感觉会导致我们改变我们的饮食吗?

## Passage thirty

AlphaGo's victory over Go(围棋)champion Lee Se-dol reportedly **shocked** artificial intelligence experts, who thought such an event was 10 to 15 years away.

But if the timing was a surprise, the outcome was not. **On the contrary**, it was **inevitable** and entirely **foreseeable**.

Playing complex games is **precisely** what computers do supremely well. Just as they beat the world champions at checkers(跳棋)and then chess, they **were destined to** beat the champion at Go. Yet I don't believe, as some do, that human **defeats** like this one **presage** an era of mass unemployment in which awesomely able computers leave most of us with nothing to do. **Advancing** technology will profoundly change the **nature** of high-value human skills and that is threatening, but we aren't doomed.

The skills of deep human **interaction**, the abilities to manage the exchanges that occur only between people, will only become more **valuable**. Three of these skills **stand out**: The first, the foundation of the rest, is **empathy**, which is more than just feeling someone else's pain. It's the ability to **perceive** what another person is thinking or feeling, and to respond in an **appropriate** way.

The second is **creative** problem-solving in groups. Research on group effectiveness shows that the key isn't team cohesion or **motivation** or even the smartest member's IQ; rather, it's the social **sensitivity** of the members, their ability to read one another and keep anyone from **dominating**.

The third **critical** ability, somewhat surprisingly, is storytelling, which has not traditionally been valued by organizations. Charts, graphs and data analysis will continue to be important, but that's exactly what technology does so well. To change people's minds or **inspire** them to act, tell them a story.

These skills, though basic to our humanity, are fundamentally different from the skills that have been the basis of economic progress for most of human history, **logic**, knowledge and analysis, which we **learned from** textbooks and in classrooms. **By contrast**, the skills of deep human interaction address the often **irrational** reality of how human beings behave, and we find them not in textbooks but inside ourselves. As computers master ever more **complexity**, that's where we'll find the source of our continued value.

【参考译文】

据报道，阿尔法围棋（谷歌开发的一款围棋人工智能程序）战胜世界围棋冠军李世石，这让人工智能专家们感到颇为震惊，他们觉得那应该是十到十五年之后的事情。虽然这件事提前发生让人吃惊，但结果并不意外。相反，这个结果是不可避免的，也是完全可以预见的。

玩复杂的游戏恰恰是计算机特别擅长的。正如计算机先是击败跳棋冠军，然后击败象棋世界冠军一样，它们注定会打败世界围棋冠军。可是我和有些人一样，认为人类的失败并不预示着大批失业时代的到来，在这个时代中，几乎无所不能的计算机会让我们无事可做。先进技术将深深地改变人类技能高价值的这一特征，并会带来威胁，但这并不意味着我们注定会失败。

人类独有的深度人际互动的技能和管理人际交流的能力将变得更有价值。有三种技能比较突出。第一种是共鸣，也是其他几种的基础。这不仅是对他人的痛苦感同身受，更是一种理解他人所想、所感，并且能以适当的方式回应的能力。

第二种技能是团队创造性解决问题的能力。研究表明，对团队效能起关键作用的不是团队凝聚力、动机甚至不是最聪明队员的 IQ 水平，而团队成员对社会的的敏感度和能够彼此相互理解的能力，并防止任何人独断的能力才是关键所在。

第三种重要的技能是故事叙述能力。这有些许意外，因为以往讲故事并未得到公司机构的重视。虽然图表和数据分析仍然会很重要，但这也正是技术所能做好的。但若想改变人们的主意，激励他们采取行动，那就讲故事。

以上人类的这些技能，虽说很基本，但与那些曾是大部分人类历史中促进经济发张的基础技能截然不同，比如我们从教科书和课堂上所习得的逻辑思维、知识和分析能力。相比之下，深度人际交往技能解决常见的人类非理性行为的问题，我们发现这些技能并不在教科书中，而在我们自身内部。随着计算机掌握了更多的复杂技能，我们也将从中发现自身持续价值的源泉。

## Passage thirty-one

Before the 1970s, college students were **treated** as children. So many colleges ran in loco parentis system. “In loco parentis” is a Latin term meaning “in the place of a parent.” It **describes** when someone else accepts responsibility to act in the interests of a child.

This idea developed long ago in British common law to **define** the responsibility of teachers toward their students. For years, American courts **upheld** in loco parentis in cases such as Gott versus Berea College in 1913.

Gott owned a restaurant off campus. Berea threatened to **expel** students who ate at places not owned by the school. The Kentucky high court decided that in loco parentis justified that rule.

In loco parentis meant that male and female college students usually had to live in separate buildings. Women had to be back at their dorms by ten or eleven on school nights.

But in the 1960s, students began to **protest** rules and restrictions like these. At the same time, courts began to **support** students who were being punished for political and social **dissent**.

In 1960, Alabama State College expelled six students who **took part in** a civil rights demonstration. They sued the school and won. After that it became harder and harder to defend in loco parentis.

At that time, students were not considered adults until 21. Then, in 1971, the 24th amendment to the Constitution **set** the voting age at eighteen. So in loco parentis no longer really **applied**.

Slowly, colleges began to treat students not as children, but as adults. Students came to be seen as consumers of educational services.

Gary Dickstein, an **assistant** vice president at Wright State University in Dayton, Ohio, says in loco parentis is not really gone. It just looks different. Today’s parents, he says, **are** often heavily **involved** in students’ lives. They **are known as** “helicopter parents.” They always seem to hover over their children. Gary Dickstein says these

parents are likely to question decisions, especially about safety issues and grades. They want to make sure their financial investment is not being wasted.

【参考译文】

在 20 世纪 70 年代之前，大学生都被当作孩子对待。因此许多大学运行“替代家长”制度。“In loco parentis”是一个拉丁词，意为“代替父母”。它描述的是，为孩子的利益着想而有人承担起父母职责。

这一观念源于很久以前的英国普通法，用来定义教师对学生的职责。多年以来，美国法庭在支持这个“替代家长”制度，比如 1913 年戈特对伯里亚学院的诉讼案。

戈特在校园外拥有一家饭馆。伯里亚学院威胁学生，如果他们不在学校经营的餐厅就餐就会被开除。肯塔基州高等法院决定根据“替代家长”制度来裁决。

“替代家长”制度意味着男女大学生必须住在不同的宿舍楼。女同学在校期间必须在 10 点或 11 点前回到宿舍。

但是在 20 世纪 60 年代，学生开始抗议类似的规定和约束。同时，法院因政治和社会异议而开始支持那些被处罚的学生。

1960 年，阿拉巴马州立大学开除了六名参与公民权利示威的学生。学生将学校告上法庭并获得胜诉。从那以后，维护“替代家长”制度变得越来越困难。

在那时，21 岁以下的学生不算成人。随后，1971 年第 24 项宪法修正案规定 18 岁开始拥有投票的权利。所以，“替代家长”制度不再真正适用。

慢慢地，大学开始不再将学生当孩子，而是当作成人来对待。学生被视为教育服务的消费者。

加里·迪克斯坦是俄亥俄州戴顿市怀特州立大学的助理副校长，他说“替代家长”制度并没有真正消失，而只是看上去不同了。他说，当今的父母常常过分干预孩子的生活，他们被称作“直升机父母”。他们似乎总是在孩子的头顶盘旋。加里·迪克斯坦说，这些父母可能会盘问孩子的决定，特别是关于安全问题和学习成绩。他们想要确保他们在教育上的投资不会被浪费。

## Passage thirty-two

The American public’s **obsession** with dieting has **led to** one of the most dangerous health misconceptions of all times. Many television ads, movies, magazine articles, and diet-food product labels would have consumers believe that carbohydrates (碳水化合物) are bad for the human body and that those who eat them will quickly become **overweight**. We are **advised** to **avoid** foods such as potatoes, rice and white bread and **opt for** meats and vegetables **instead**. Some companies **promote** this idea to **encourage** consumers to buy their “carb-free” food products. But the truth is, the human body needs carbohydrates to **function properly**, and a body that **relies on** carbohydrates but is **exhausted** of this dietary element is not in good shape **after all**.

Most foods that we **consume** on a daily basis like potatoes and rice **are loaded with** carbohydrates. **Contrary to** popular belief, carbohydrates have many health

**benefits** some fight diseases such as high blood pressure and heart disease, and others help to prevent cancer and stroke. Cutting these foods out of your diet may **deprive** your body **of** the many health benefits of carbohydrates.

One of the best benefits of carbohydrates is their ability to help to **maintain** the health of our organs, tissues, and cells. Scientific studies have shown that one type of carbohydrate called fiber reduces the risk of heart disease. Carbohydrates also **contain** antioxidants (抗氧化剂) , which protect the body's cells from harmful particles with the **potential** to cause cancer.

This does not mean that the human body can **survive** on a diet composed **entirely** of carbohydrates. We also need certain percentages of proteins and fats to maintain healthy bodies. But carbohydrates certainly should not be avoided altogether. In fact, the food pyramid, the **recommended** basis of a healthy diet, shows that a person should consume six to eleven servings of breads and grains, as well as three to four servings each of fruits and vegetables - all carbohydrate-containing foods. It is easy to see why cutting carbohydrates out of a person's diet is not a good idea.

The only way to know what is truly healthy for your own body is to talk to a nutritionist or dietician, who can help you choose foods that are right for you as well as **guide** you toward a proper exercise program for weight loss, or muscle gain. These professionals will never tell you to **cut out** carbohydrates entirely! The bottom line: listen to the experts, not the advertisers!

【参考译文】

美国公众对于节食的迷恋已经产生了有史以来最为危险的错误健康理念。很多电视广告，电影，杂志文章以及节食的产品的标签使消费者相信：碳水化合物对人身体不好，人们吃了这些食物，很快就会变得体重超标。他们建议我们不要吃土豆，米饭、白面包等食物，而要多吃肉类与蔬菜来代替。一些公司宣传这种观点是为了让消费者购买无碳水化合物食品。但是，事实却是：人的身体需要碳水化合物才能正常运转。人的身体是依赖于碳水化合物的，如果消耗尽这种饮食成分，人的体型也不会好的。

我们每天所吃的，如土豆，米饭等食物都具有碳水化合物。与公众认为的正好相反，碳水化合物对于健康来说有很多益处；有些可以预防疾病，如高血压和心脏病，另外一些物质可以帮助预防癌症及中风。把这些物质从你每天的饮食中去掉，将会夺走碳水化合物带给你很多健康好处。

碳水化合物带给我们健康最大的好处之一就是保持我们身体器官、组织以及细胞的健康。科学研究表明，一种叫做纤维物质的碳水化合物减少了我们患心脏病的风险。碳水化合物同样也含有抗氧化剂，可以保护我们身体细胞不受那些潜在的，能引发癌症的物质的侵害。

这并不意味着，人体可以依靠完全是碳水化合物的食品生存，我们同样也需要一定比例的蛋白质和脂肪来保持身体的健康。但是不能完全杜绝摄入碳水化合物。事实上，食品金字塔（健康饮食所推荐的标准）表明，一个人应该食用 6-11 份面包和谷物等食品，3-4 份水果及蔬菜，这些食物中都含有碳水化合物。显而易见，从人们的饮食中去掉碳水化合物并不是个明智的选择。

了解真正对你身体有益的方法就是去请教营养师或者饮食学家，他们可以帮你选择正确的食物并且指导你通过适当的运动来减轻体重或者增加肌肉。这些专

家们绝不会告诉你去完全戒掉碳水化合物食品。底线就是：听专家的，不要听广告商的。

## Passage thirty-three

There are few sadder **sights** than a pile of fan letters, lovingly **decorated** with hand drawing, suffering in a bin. The **sparkly** envelopes were **addressed** to Taylor Swift, a pop star much **beloved** by teenage and pre-teen girls.

"Dear Taylor," read one **discarded** message, "I love you so much! You're the best! And you're really beautiful and cute! I'm really enjoying your songs."

This, **along with** hundreds of other similar letters sent from around the world, was discovered in a Nashville **recycling disposal** unit by a local woman. Swift's manager was quick to **reassure** her admirers that they had been thrown out accidentally. The **response** may come as a disappointment to any devotee who imagines, as they **compose** their letters, that Swift makes time to view each one personally.

Dealing with piles of fans mail is, however, an administrative burden for most celebrities. While some celebrities do like to go through their mail personally, the majority simply do not have time. But the **fate** of their correspondence is something most **committed** fans will not wish and dwell on, says Lynn Zubernis, an expert in the psychology of fandom at West Chester University.

"There's this little bit of every fan that thinks theirs will be the one that stands out—it's not an expectation, but a hope that theirs will be seen by the celebrity."

While the relationship between the fan and the celebrity may exist only in the mind of the former, it stems from a **deeply-rooted** human need for community and **belonging**, Zubernis believes. **As a result**, even receiving a **mass-produced** letter of **acknowledgement** and a photo **stamped with** a reproduced signature can be a powerful experience.

"People have a **tremendous** need to connect with the person they are idolising (偶像化), " she says. "They can't ring them up and say, 'Can we have coffee? ' It's not about the autograph (签名) , It's about the moment of **connection**. "

【参考译文】

没有比这更让人伤心的景象了：一大堆粉丝亲手绘画的可爱信件被扔进了垃圾箱。这些耀眼的信都是寄给一位备受十来岁甚至更年轻女孩喜爱的流行歌曲明星：泰勒·斯威夫特。

一封被丢弃的信中这样写道："亲爱的泰勒，我非常喜欢你！！你是最棒的!!你真的很漂亮，也很可爱！我真的很喜欢你的歌！"

这封信件，和其他从世界各地寄来的类似的数百封信件被当地的一位妇女在 Nashville 的一个可回收废品站发现的。斯威夫特的经纪人立即安抚这些崇拜者们，称这些信件是被意外丢失的。这种回应对于任何一个在写信时想象着斯威夫特能抽时间亲自看看的信徒来说都是一种失望。

然而对于大多数明星来说，处理成堆地粉丝信件是一种管理上的负担。尽管一些明星确实喜欢自己阅读自己的邮件，但大部分的明星没有时间。然而，西切斯特大学的粉丝心理学专家林恩· 泽布尼斯发现大部分忠诚的粉丝不愿思考自己的信件是如何被对待这个事实。

“几乎每一个粉丝认为自己的信件是最独特的那一封—这不是一种期待，而是一种希望，希望自己的信件被名人看到。”

在泽布尼斯看来，尽管粉丝和名人的关系可能只存在粉丝们的心中，但却是根源于根深蒂固的人类对社会和归属感的需要。因此，即使收到一封批量打印的感谢信件和一张印有签名印章的照片都是一种非凡的体验。

她说：“人们极其渴望与他们的偶像联系在一起，他们无法给自己的偶像打电话说，‘我们可以一起喝咖啡吗？’这不是签名的问题，这是粉丝和偶像产生联系的重要时刻。”

## Passage thirty-four

A 10-year-old boy decided to study judo (柔道) despite the fact that he had lost his left arm in a terrible car accident. The boy began lessons with an old Japanese judo master, and he was doing well. But he couldn’t understand why, after three months of training, the master had taught him only one move.

“Sir,” the boy finally said, “shouldn’t I be learning more moves?”

“This is the only move you know, but this is the only move you’ll ever need to know,” the master replied.

Not quite understanding, but believing in his teacher, the boy kept training.

Several months later, the master took the boy to his first tournament (锦标赛). Surprising himself, the boy easily won his first two matches. The third match proved to be more difficult, but after some time, his opponent became impatient and charged; the boy skillfully used his one move to win the match. Still amazed by his success, the boy was now in the finals.

This time, his opponent was bigger, stronger, and more experienced. For a while, the boy appeared to be overmatched. Concerned that the boy might get hurt, the referee called a time-out. He was about to stop the match when the judo master intervened.

“No,” the judo master insisted, “Let him continue.”

Soon after the match resumed, his opponent made a critical mistake: he dropped his guard. Instantly, the boy used his move to pin him. The boy had won the match and the tournament. He was the champion.

On the way home, the boy and his judo master reviewed every move in each and every match. Then the boy summoned the courage to ask what was really on his mind.

“Sir, how did I win the tournament with only one move?”

“You won for two reasons,” the master answered.

"First, you've almost mastered one of the most difficult throws in all of judo. Second, the only known defense for that move is for your opponent to grab your left arm."

【参考译文】

一个 10 岁的男在严重的车祸中失去了左臂，尽管如此，仍然决定学习柔道。这个男孩跟一位年长的日本柔道大师上课，学得很好。但他不明白为什么，已经训练 3 个月了，老师还只是教他那一招。

男孩终于说道："先生，是不是要再学几个动作？"

"这是你知道的唯一招式，而且这也是你唯一需要知道的招式，"大师回答。

虽然没有听太懂，他相信老师的话，继续训练。

几个月后，大师带徒弟去参加第一个锦标赛。

让人惊讶的是，男孩轻松地赢得了头两场比赛。第三场就没那么轻松了，但过了一会儿，对手就变得不耐烦，情绪化起来；男孩技术娴熟地使用那一动作，赢得了比赛。带着对成功的惊讶，小男孩进入了决赛。

这一次，他面临的对手从身高、体格到经验都更胜一筹。一时间，男孩好像被打败了。裁判担心男孩受伤，宣布中场暂停。就在裁判想终止比赛的时候，柔道大师出面拦住了他。

"不，"柔道大师坚持说，"让他继续。"

比赛重新开始没多久，男孩的对手就犯了一个关键性错误：他弄掉了自己的防护装置。男孩立即使用他的招式控制住了对方，最终赢得本场比赛，成为锦标赛冠军。

在回家路上，男孩和他的柔道大师回顾了每场比赛中的每个动作。这时候男孩鼓起勇气，问了那个一直萦绕在他脑海中的问题。

"先生，我为什么仅凭这一个动作就能获胜？"

"你获胜有两个原因，"大师回答。

"第一，你几乎掌握了柔道所有击打招式里最难的一招。第二，对付这个动作的办法，对手需要抓住你的左臂。"

## Passage thirty-five

Until last spring, Nia Parker and the other kids in her neighborhood commuted to school on Bus 59. But as fuel prices rose, the school district needed to find a way to cut its transportation costs. So the school's busing company redrew its route map, eliminating Nia's bus altogether. Now Nia and her neighbors travel the half mile to school via a "walking school bus"—a group of kids, supervised by an adult or two, who make the walk together.

Like the rest of us, school districts are feeling pinched by rising fuel costs- and finding new ways to adapt. The price of diesel fuel has gone up 34 percent in the past two years. For the typical American school district, bus bills total 5 percent of the budget. As administrators look to trim, busing is an inviting target, since it doesn't

affect classroom instruction (or test scores). More than one third of American school administrators have eliminated bus stops or routes in order to stay within budget.

Many parents are delighted to see their kids walking to school, partly because many did so themselves: according to a 1969 survey, nearly half of school kids walked or biked to school, compared with only 16 percent in 2001. Modern parents have been unwilling to let kids walk to school for fear of traffic, crime or simple bullying, but with organized adult supervision, those concerns have diminished.

Schools and busing companies are finding other ways to save. In rural areas where busing is a must, some schools have even chosen four-day school weeks. Busing companies instruct drivers to eliminate extra stops from routes and to turn off the engine while idling. They are also using computer software to determine the most fuel-efficient routes, which aren't always the shortest ones.

There could be downsides, however, to the busing cutbacks. If every formerly bused student begins walking to school, it's an environmental win- but if too many of their parents decide to drive then instead, the overall carbon footprint can grow. Replacing buses with many more parent- driven cars can also increase safety risks: A 2002 report concluded students are 13 times safer on a school bus than in a passenger car, since buses have fewer accidents and withstand them better due to their size. And some students complain about the long morning hikes, particularly when the route contains a really big hill.

【参考译文】

直到去年春天，尼娅·帕克和社区内的其他小孩上下学一直都乘坐59路校车。由于油价飞涨，该学区需要找到降低交通成本的方法。因此，学校巴士公司重新规划了行车路线，取消了尼娅乘坐的校车。现在尼娅和邻居要靠"步行校车"走半英里的路到学校上课。"步行校车"是指一群孩子在一个或两个大人的监督下，一同步行去上学。

和我们一样，油价上涨也让学区感到不安，不得不寻求新的解决方法。过去两年，柴油价格上涨了34%。对于典型的美国校区来说，校车的花费占总预算的5%。管理者想削减支出时，校车接送便成了他们考虑的目标，因为这不会对课堂教学或考试成绩有任何影响。为了保证预算不超支，美国超过三分之一的校园管理者选择撤除校车站或行车路线。

很多家长很高兴看到孩子步行上学，部分原因是他们当年就是这样做的：1969年一项调查显示，当时将近50%的学生步行或骑车上学，而在2001年这个数字只有16%。现在的父母由于担心路况、犯罪或欺凌，一直不愿意让孩子走路上学；但现在有了大人有组织地监管，这些担心就减少了。

学校和校车公司正在寻找节约开支的其它方式。农村地区校车是必备的，有些学校甚至选择一周上学四天的制度。校车公司规定司机多撤销几个路线中的额外车站，空车时关掉发动机。他们还利用计算机软件计算出最节省汽油的路线，但这些路线往往都不是最短的。

然而，减少校车也有可能造成不利影响。如果过去乘校车的学生开始步行上学，这有利于环保；但如果太多学生的家长选择开车送学生的话，碳排放总量就会增加。家长开车取代校车接送学生还会增加安全风险。根据2002年的报告得出结论：学生乘坐校车的安全性比乘坐私家车高13倍，因为巴士发生交通事故

的机会更少，体积大可以更好地抵御意外发生。当然也有些学生抱怨早上上学要走很长的路，特别是路上要经过很高的山坡。

## Passage thirty-six

Many of the major supermarket chains have come under fire with accusations of various unethical acts over the past decade. They've wasted tons of food, they've underpaid their suppliers and they've contributed to excessive plastic waste in their packaging, which has had its impact on our environment.

But supermarkets and grocers are starting to sit up and take notice. In response to growing consumer resentment against the huge amounts of plastic waste generated by plastic packaging, some of the largest UK supermarkets have signed up to a pact promising to transform packaging and cut plastic wastage. In a pledge to reuse, recycle or convert all plastic wastage by 2025, supermarkets are now beginning to take some responsibility for the part they play in contributing to the damage to our environment, with one major supermarket announcing their plan to eliminate all plastic packaging in their cwm-brand products by 2023.

In response to criticisms over food waste, some supermarkets are donating some of their food surplus. However, charities estimate that they are only accessing two percent of supermarkets' total food surplus, so this hardly seems to be solving the problem.

Some say that supermarkets are simply not doing enough. Most supermarkets operate under a veil of secrecy when asked for exact figures of food wastage, and without more transparency it is hard to come up with a systematic approach to avoiding waste and to redistributing surplus food.

Some smaller companies are now taking matters into their own hands and offering consumers a greener option. Shops like Berlin's Original Unverpakt and London's Bulk Market are plastic-free shops that have opened in recent years, encouraging customers to use their own containers or convertible bags. Online grocer Farmdrop eliminates the need for large warehouses and the risk of huge food surplus by delivering fresh produce from local farmers to its customers on a daily basis via electric cars, offering farmers the lion's share of the retail price.

There is no doubt that we still have a long way to go in reducing food waste and plastic waste. But perhaps the major supermarkets might take inspiration from these smaller grocers and gradually move towards a more sustainable future for us all.

【参考译文】

在过去十年中，许多大型连锁超市都因各种不道德行为而受到指责。他们浪费了很多食物，他们少付了供应商的工资，并且在包装过程中制造了过多的塑料垃圾，这对我们的环境造成了影响。

但是，超市和杂货店开始正视这个问题了。为了应对消费者对塑料包装所产生的大量塑料废料的不满情绪，英国一些最大的超级市场已签署一项协议，承诺改变包装，减少塑料浪费。超市承诺在 2025 年之前将所有塑料废弃物进行再利用、回收或转化，超市现在开始为他们在破坏环境中所扮演的角色承担一些责任。一家大型超市宣布了其计划在 2023 年之前消除 cwm 品牌产品中所有的塑料包装。

为了回应对食物浪费的批评，一些超市正在捐赠剩余的食物。但是，慈善机构估计，他们只能获得超市总食品剩余量的 2%，因此这似乎很难解决问题。

有人说，超市根本做得不够。当要求提供确切的食物浪费数字时，大多数超市对此都秘而不宣，如果没有更高的透明度，很难提出一种系统方法来避免浪费和重新分配剩余食物。

一些较小的公司开始自己动手，并为消费者提供更环保的选择。柏林的 Original Unverpakt 和伦敦的 Bulk Market 等商店都是近几年开设的无塑料商店，它们鼓励顾客使用自己的容器或可循环使用的袋子。在线杂货商 Farmdrop 通过每天通过电动汽车将当地农民新鲜的农产品送到顾客手中，且给农民最大的零售价格，从而消除了对大型仓库的需要和的食物过剩带来的风险。

毫无疑问，我们在减少食物浪费和塑料浪费方面还有很长的路要走。但也许大型超市可能会从这些较小的杂货店中汲取灵感，并逐步朝着我们所有人更可持续的未来发展。

## Passage thirty-seven

Senator Kamala Harris was half right in her speech launching her 2020 presidential campaign when she said we need to address climate change based on “science fact, not science fiction. " The truth is, we need both. Science fiction has an important role to play in rescuing the future from the huge challenges were facing---and the responses to Harnis' statement illustrate this perfectly.

When Harris statement about climate change went out on social media, a number of people pointed out the truth: Science fiction has been helping us to prepare for a world of potential climate disasters for years. But an equal number of loud voices disagreed with Harris warnings about climate change， because in our post-truth era, the scientific census about what humans are doing to our planet is still somehow a matter of opinion.

And that's why science fiction is more important than Harris gives it credit for. No amount of scientific evidence will convince deniers--or the vast number of people who merely live in a state of denial. We live in a post truth era in which facts and fiction are blurring into an indistinguishable mess and power belongs to whoever can tell the best story, true or not. What matters is just how something makes us feel--which is why we need better stories, that, in the words of author Neil Gaiman, " lie in order to tell the truth.”

Stories about climate change might be fiction, but they can help to sway peoples hearts and minds in a different way than a recitation of the undeniable facts. Science fiction creators have been looking for ways to restore people's faith in the future.

Authors such as Alexandra Rowland have started a conversation about creating a new type of stories called "Hope punk" that show people reasons to believe we really can do the hard work of fixing our problems. Some other authors are creating a new genre called "Solar punk" that aims to tell stories about using technological and scientific innovation to help the environment.

When the truth becomes near-impossible to distinguish through the fog of disinformation and alternative facts, "people tend to feel powerless to change the world. Activist L A. Kauffman says people need to be reminded that they "have more collective power than they realize, "Adds Kauffman, "There are truths we can get to through the imagination that are hard to get to through purely factual accounts."

【参考译文】

参议员卡玛拉·哈里斯(Kamala Harris)在她 2020 年总统竞选的演讲中说，我们需要基于"科学事实，而不是科幻小说"来解决气候变化问题，她说的有一半是对的。事实上，我们两者都需要。科幻小说在帮助未来摆脱我们所面临的巨大挑战方面扮演着重要的角色，而人们对哈里斯声明的回应完美地说明了这一点。

当哈里斯在社交媒体上发表关于气候变化的声明时，许多人指出了真相：多年来，科幻小说一直在帮助我们为一个充满潜在气候灾难的世界做准备。但是同样多的人不同意哈里斯关于气候变化的警告，因为在我们的后真相时代，关于人类对地球所做的一切的科学共识，某个程度上仍然是一个观点问题。

这就是为什么科幻小说比哈里斯认为的更重要。任何科学证据都无法说服否认者，也无法说服大量生活在否认状态中的人。我们生活在一个后真相时代，在这个时代，事实和虚构正在模糊成难以分辨的整体，权力属于任何能讲出最好故事的人，不管真实与否。重要的是一些事情让我们感觉如何——这就是为什么我们需要更好的故事，用作家尼尔·盖曼(Neil Gaiman)的话来说，就是"为了讲真话而撒谎"。

关于气候变化的故事可能是虚构的，但它们能以一种不同于背诵不可否认的事实的方式，影响人们的心灵和思想。科幻小说的作者一直在寻找恢复人们对未来信心的方法。亚历山德拉•罗兰(Alexandra Rowland)等作家已经开始讨论创造一种名为"希望朋克（Hope punk）"的新型故事，让人们有理由相信，我们真的可以通过努力解决问题。其他一些作家正在创作一种名为"太阳朋克"的新体裁，旨在讲述利用科技和科学创新来保护环境的故事。

当真相在虚假信息和另类事实的迷雾中变得几乎无法分辨时，"人们往往感到无力改变世界。活动家考夫曼说，需要提醒人们，他们"拥有比他们意识到的更多的集体力量，"考夫曼补充说，"我们可以通过想象得到一些事实，而这些事实是很难通过纯粹的事实描述得到的。"

## Passage thirty-eight

Imagine that you're a fly. You're just looking for a place to rest,when you see a nice pink leaf. That looks like a nice place to land. As you rest your feet on the leaf, you notice something strange .This leaf is hairy. You begin to make your move, but

you trigger the plant's reaction. Snap! In one-tenth of a second, you are caught in the Venus flytrap. You will be digested in five to twelve days.

Out of about 391,000 plant species in the world, only 600 or so are carnivorous. We call them this because they attract, trap， and eat bugs. Like other plants, they get energy from the sun. But unlike other plants, they get their nutrients from their prey (猎物）.Carnivorous plants live in places where the soil lacks nutrients. Most plants get nutrients from the soil. Carnivorous plants have turned to other sources.

Pitcher plants trick their prey into landing on them. They offer nectar (花蜜）bribes to the foolish insects that would take them. True to their name, pitcher plants have deep chambers. Their landing surface is slippery. They have inward pointing hairs, making it hard to escape. The fly lands on the pitcher plant to eat but slips into a pit filled with digestive fluids.

Corkscrew plants have inviting stems. Curved hairs line the inside of these stems. These hairs allow insects to go up the stems, but not back. Going forward leads to the plant's stomach. Bugs who wander into the corkscrew plant find that they are unable to escape. They must march to their own death.

And then there are the bladderworts. They live in water and float near the surface. Their traps are like small bladders( 囊状物 )hidden beneath the water. Only their flowers are visible from the surface. When bugs swim into the trigger hairs, the plant reacts. The bladder sucks up the prey and the water surrounding it. The prey will be digested within hours.

【参考译文】

想像你是一只苍蝇，你正在寻找一处落脚的地方。当你看到一片粉色的叶子，看似一块可以落脚的好地方。当你双脚落在这片叶子上时，你注意到了有些不对劲。这片叶子毛茸茸的。当你想要移动时，却发现自己触发了这个植物的反应机制。 喀嚓！不到十分之一秒的时间，你落入捕蝇草的陷阱，并将在 5 到 12 天内被消化掉。

全球约有 391，000 种植物，只有 600 多种是食肉性植物。我们称之为食肉性植物，是因为他们能够迷惑、诱捕并吃掉虫子。和其它指物一样，它们通过太阳获得能量。但又和其它植物不一样的是，它们通过猎物获得营养。食肉性植物居住的地方，土壤缺乏营养。许多植物从土壤中获得营养，但食肉性植物却不得不转向其它来源。

猪笼草诱惑猎物着落到它们身上，利用花粉做诱饵，迷惑那些愚蠢的昆虫。正如其名， 猪笼草呈深桶型。瓶口表面很光滑，有向内生长的刚毛，从而使猎物无法逃脱。这只苍蝇被诱落在猪笼草上，但却滑入了全是消化液的囊中。

螺旋狸藻有诱人的茎，茎中有弯曲的毛发。这些毛发让虫子只能向上爬向树干，但却无法返回。向上通向植物的胃。落入螺旋狸藻里的虫子发现自己无法逃脱，它们只能走向死亡。

还有狸藻类植物。它们生长在水中，漂浮在水面。狸藻的捕食器类似囊状物，隐藏在水下，而在水面只能看到它的花。当虫子游近刺毛时，狸藻就开始活动了。它随着水流吸食着猎物，猎物将在数小时内会被消化掉。

# Passage thirty-nine

Almost eight years ago, the American educator Abraham Flexner **published** an article **entitled** The Usefulness of Useless Knowledge. In it , he **argued** that the most powerful **intellectual** and technological **breakthroughs** usually **emerged from** research that **initially** appeared "useless", without much relevance to real life.

**As a** res**u**lt, it was **vital**, Flexner said, that these "useless" **efforts** should be **supported**, **even if** they did not produce an **immediate** payback, because **otherwise** the next wave of innovation **simply** would not occur. "Curiosity, which may or may not produce something useful, is **probably** the outstanding characteristic of modern thinking," he declared.

In 1929, Flexner **persuaded** a **wealthy** American family, the Bambergers, to use some of their donations to **fund** the Institute for Advanced Study(IAS) at Princeton to support exactly this kind of "undirected" research.

And it **paid off**: brilliant Jewish scientists fleeing from Nazi Germany, such as Albert Einstein, gathered at the IAS to **explore** undirected ideas. And while some of these, such as Einstein's own work developing his early theory of relativity, did not initially seem **valuable**, many **eventually** produced powerful applications (though after many decades).

Without Einstein's theory, our GPS tracking devices would be **inaccurate** by about seven miles," writes Robbert Dijkgraaf , the **current** director of the IAS, in the foreword to a newly released reprint of Flexner's article. **Concepts** such as quantum mechanics(量子力学)or superconductivity also seemed **fairly** useless at first—but yielded huge dividends at a later date.

The reason why the IAS is re-releasing Flexner's article now is that scientists such as Dijkgraaf fear this core principle is increasing under **threat**. The Trump administration has **released** a projected budget that threatens to reduce funding for the arts, science and educational groups. Many Republicans believe that research is better financed by business or philanthropists(慈善家)than by government. But one **striking** fact about the past century is how much American innovation **originated** in federal projects; Silicon Valley would never have **boomed** were it not for the fact that state funding enabled the development of the World Wide Web, for example.

**【参考译文】**

大约在 80 年前，美国教育家亚伯拉罕·弗莱克斯纳发表了一篇题为《无用知识的有用性》的文章。在文章中，他认为，最强大的知识和技术突破通常来自于最初看起来"无用"的、与现实生活没有太大关系的研究。

因此，弗莱克斯纳说，最重要的是，即使没有立即产生回报，这些"无用的"努力应该得到支持，这是因为，若非如此，下一波创新根本不会发生。他宣称:"好奇心可能会产生有用的东西，也可能不会，但很可能是现代思维的突出特征。"

1929 年，弗莱克斯纳说服了富有的美国家庭班伯格家族，用他们的一些捐款来资助普林斯顿的高等研究院（IAS），以支持这种"无目标"的研究。

此举获得了回报：诸如阿尔伯特·爱因斯坦等逃离纳粹德国的杰出犹太科学家，聚集在高等研究院来探索无目标的想法。虽然其中的一些研究，比如爱因斯坦自己进行的早期相对论研究，一开始似乎并无价值，但许多研究最终产生了影响巨大的应用效果(尽管经过了几十年)。

“如果没有爱因斯坦的理论，我们的全球定位系统（GPS）跟踪装置的精准度将降低大约 7 英里。”普林斯顿高等研究院现任院长罗贝特·戴格拉夫在最新出版的弗莱克斯纳的文章重印版中写道。量子力学或超导等概念起初也看似相当无用——但在以后的日子里却产生了巨大的红利。

现在，普林斯顿高等研究院重新再版弗莱克斯纳的文章的原因是，像戴格拉夫这样的科学家们担心这一核心原则正日益受到威胁。特朗普政府公布了一项预算计划，可能会减少对艺术、科学和教育团体的拨款。许多共和党人认为，研究最好由企业或慈善家出资，而不是由政府来资助。但在过去的一个世纪里，一个引人注目的事实是，多少美国的创新源自于联邦项目；例如，如果不是因为国家资金支持万维网的发展，硅谷就永远不会蓬勃发展。

## Passage forty

Last year, I went WWOOFing (Willing Workers on Organic Farms) at a beautiful organic farm in La Réunion. With WWOOFing, volunteers **exchange** their time and work for food and accommodation. I slept in a cabin in the woods with hedgehogs(刺猬) digging about in the bushes, all different coloured birds singing in the morning and **endless** rows of palm trees offering shade from the sun.

For me, one of the best ways to get to know a new place is to work with the land, live with the locals and **share** meals together. This is why I **absolutely** love WWOOFing. It has got to be one of the best ways to travel. It is a **mutually beneficial exchange** where everyone **involved prioritises** people and environment above **profit**. You get the time and space to **deepen** a connection with local communities and nature.

There is a lot to learn and each farm has its own **unique** way of doing things, **depending on** the environment, climate and soil. At the farm in La Réunion we planted palm trees to **harvest** the core of the trunk which can be eaten in salads. Before staying with the farm I had only eaten heart of palm from cans which were nothing **in comparison to** the real thing, fresh from the ground. When potting up the very beginnings of the palm trees, I felt grateful to be a part of the start of the trees' cycle. I was filled with **awe** that something so small could grow into something so big and strong.

We also did lots of weeding, which helped me to get to know all kinds of different plants, to be able to **identify** which ones we could use as herbs/medicine/in salads and which were seen as **uneatable**. I also got to harvest pineapples and guava fruit(番石榴) to make jams which will be sold at the local market.

Of course, not everyone is able to travel far away into the field. The great thing about the skill-share **philosophy** behind WWOOFing is that it’s something we can all do from our own backyard. The focus **shifts** from money to how we can best **support**

each other in our communities. A **fair exchange** can **make a big difference** in the world.

**【参考译文】**

去年，我参加了在留尼汪岛（La Réunion）南边一个漂亮的有机农场的WWOOFing（有机农场志愿工作者组织）。通过 WWOOFing，志愿者用时间和劳动来换取食物和住宿。我睡在林中小屋，附近有刺猬在灌木丛中挖洞，各种鲜艳颜色的小鸟在早晨歌唱，还有成排看不见尽头的棕榈树遮阴挡阳。

我认为要了解一个陌生的地方，最好的方式是在这片土地上劳作，和当地人同吃住同住。这也正是我非常喜爱 WWOOFing 的原因。在有机农场做义工也是一种很好的旅行方式。这里的每个人都把人和环境放在首位，形成一种互惠互利的交换。你可以有时间和空间去深入了解当地社区和自然。

参加这个活动，我们需要学习的有很多，因为每个农场的环境，气候和土壤不同，所以做事方式也不尽相同。在留尼汪岛（La Réunion）有机农场，我们种植了棕榈树，用收获棕榈芯拌沙拉吃。在此之前，我只吃过棕榈芯罐头制品，但那味道和地里新长出来的纯正的棕榈芯的味道相差甚远。当我栽培棕榈幼苗时，我对能参与树木周期的初期阶段满怀感激。这么小的幼苗能长成粗壮的大树，我内心不由得生出敬畏之情。

我们也做了大量的除草工作,这让我认识了各种不同的植物，并能辨别哪些可以用来制作草药，哪些可以做沙拉，哪些不能吃。我还收获了菠萝，番石榴，这些水果可以制成在当地市场出售的果酱。

当然了，并不是每个人都能够大老远地来到这里。WWOOFing 折射出的“技能分享”哲学的伟大之处在于：这些都是我们可以从自家后院做的事情。其关注点从金钱转移到我们在社区中怎样能最好地支持彼此。一个公平的交换可以使这个世界大不同。

## Passage forty-one

We **tend to** think of plants as the furniture of the natural world. They don’t move they don’t make sounds; they don’t seem to **respond to** anything—at least not very quickly. But as is often the case, our human view of the world misses quite a lot. Plants talk to each other all the time. And the language is chemical.

Over the years scientists have reported that different types of plants, from trees to tomatoes, **release compounds** into the air to help neighboring plants. These chemical warnings all have the same **purpose**—to **spread** information about one plant’s disease so other plants can **defend** themselves. But **exactly** how plants **receive** and act on many of these signals is still mysterious.

In this week’s Proceedings of the National Academy of Sciences, researchers in Japan offer some **explanations**. They have **identified** one **chemical** message and **traced** it all the way from release to action.

The scientists looked at tomato plants infested (侵害) by common pest, the cutworm caterpillar (毛毛虫). To start out, they grew plants in two plastic

compartments **connected** by a tube. One plant was infested and placed **upwind** and the others were uninfested and placed downwind. The downwind plants were later exposed to the cutworm caterpillar. The results showed that plants that had **previously** been near sick neighbors were able to defend themselves better against the caterpillar.

The researchers also studied leaves from exposed and unexposed plants. They found one compound **showed up** more often in the exposed plants. The **substance** is called Hex Vic. When the scientists fed Hex Vic to cutworms, it **knocked down** their survival rate by 17%. The scientists identified the source of Hex Vic, and **sprayed** it lightly over healthy plants. Those plants were then able to start producing the caterpillar-killing Hex Vic. Researchers **confirmed** that uninfested plants have to build their own **weapon** to fight off bugs and diseases. How do they know when to play defense? They are warned first by their friendly plant neighbors.

It is a **complex** tale, and it may be happening in more plant species than tomatoes. It may also be happening with more chemical signals that are still unknown to us. For now though, we know that plants not only communicate, they look out for one another.

**【参考译文】**

我们常常把植物看作是自然界的家具。它们不能动，不能发出声音来，它们似乎不对任何事情做出回应—至少反应没那么快。但是通常情况下，人类对世界的看法错了很多。植物彼此间一直在交流，语言是化学物质。

几年来，科学家发表报告称，从树到西红柿等不同种类的植物通过向空气中释放化学物质来帮助邻近植物。这些化学警告物质都有着相同的目的—传播一株植物的病虫害信息，以便其他植物可以进行自我防御。但是，植物是如何确切地接收并付诸于行动的，这仍然是一个谜。

在本周的《美国国家科学院院刊》，日本研究员给出了解释。他们发现了一种化学信息，并追踪了植物释放这种信息到其起作用的整个过程。

科学家观察几株遭受普通虫害(毛虫)的西红柿。一开始，他们在两个由一根管子连起来的单独的塑料空间内栽种植物。一株遭了虫害的植物被放置在上风口，其他没遭虫害的植物放置在下风口。背风放置的植物随后也遭到了虫害。结果表明，以前挨着生病邻居的植物能更好地保护自己免受虫害。

研究人员们也研究了暴露和没暴露给害虫的叶子，发现一种化学物质频繁出现在暴露给害虫的植株上。这种化学物质被称作 Hex Vic。当科学家给毛虫喂 Hex Vic 这种化学物质后，其生存率降低了 17%。科学家查明了 HexVic 来源，并把它轻轻地喷洒在健康的植株上。那些植株就能生产出 HexVic 这种杀虫物质来。研究家已经证实了没遭受虫害的植株为了能够抵御害虫和疾病不得不制造出自己的武器。它们怎么知道何时保护自己呢？它们首先得到了它们友好的邻近植株的警告。

它绝非是一个简单的故事，也绝非只产生在西红柿植株上。它也许和许多我们还不知晓的其它化学信号一起产生的。现在，我们知道植物不仅能够相互交流，而且也能够相互照应对方。

# Passage forty-two

Of all the lessons taught by the **financial crisis**, the most **personal** has been that Americans aren't so good at money-management. We take out home loans we can't afford. We run up **sky-high** credit-card debt. We don't save nearly enough for retirement.

In **response**, supporters of financial-literacy education are moving with **renewed enthusiasm**. School districts in states such as New Jersey and Illinois are adding money-management courses to their curriculum . The Treasury and Education departments are sending lesson plans to high schools and **encouraging** students to **compete** in the National Financial Capability Challenge that begins in March.

Students with top scores on that exam will receive **certificates** -but chances for long-term benefits are slim. As it **turns out**, there is little **evidence** that traditional efforts to **boost** financial know-how help students make better decisions outside the classroom. **Even as** the financial-literacy movement has **gained steam** over the past decade, scores have been falling on tests that measure how well students learn about things such as budgeting, credit cards, insurance and investments. A recent survey of college students **conducted** for the Jump Start Coalition for Personal Financial Literacy found that students who'd had a personal-finance or money-management course in high school scored no better than those who hadn't.

"We need to **figure out** how to do this the right way," says Lewis Mendel, a professor at the University of Washington who after 15 years of studying financial-literacy programs has **come to the conclusion** that **current** methods don't work. A growing number of researchers and educators agree that a more **radical approach** is needed. They **advocate** starting financial education a lot earlier than high school, putting real money and spending decisions into kids' hands and talking openly about the emotions and social influences **tied** to how we spend.

Other **initiatives** are **tacking** such real-world issues as the **commercial** and social pressures that affect purchasing decisions. Why exactly do you want those expensive brand-name shoes so badly? "It takes confidence to take a stand and to think differently," says Jeroo Billimoria, founder of Aflatoun, a **nonprofit** whose curriculum, used in more than 30 countries, **aims to** help kids **get a leg up** in their financial lives."This goes **beyond** money and savings".

【参考译文】

在金融危机所带给我们的教训中，与个人最相关的是：美国人不太善于理财。我们的房贷款金额超出了承受能力，大笔的信用卡欠款，没有足够的储蓄来支持退休以后的生活。

对此，金融知识教育的支持者们的热情被重新激发出来了。在新泽西、伊利诺伊等州的学区增加了财务管理课程，财政部及教育部对高中制定了新的课程计划，鼓励学生们参加每年 3 月份开始的全国理财水平竞赛。

在这项测试中获得高分的学生将取得相关的证书。但从长远的角度看，从此获益的机会却微乎其微。结果是很少有证据证明，传统的关于金融知识的推广能

够帮助学生在课堂之外做出更好的决定。即使此类金融知识推广运动在过去比较兴盛的十年中，在检测预算、信用卡、保险、投资等方面能力测试中，分数一直在下降。

私人理财启动联盟近期进行了一项调查，调查显示：在高中上了个人财务或财务管理课程的学生所得的测试成绩不比没有参加此类课程的学生的得分高。

华盛顿大学的教授刘易斯·曼德尔说："我们需要弄清楚怎样正确处理这件事"，这位教授在进行了 15 年的金融知识课程研究后，得出结论：现在的方法不起作用。越来越多的研究者和教育者们也认为：应该采取一些更加激进的方法。他们提倡，应该在高中之前，提早很多进行财政教育，把钱交给孩子，让孩子们自己来做购买决定，并敞开心扉地谈论情感、社会因素对我们做购买决定时的影响。

其他的一些措施则用于处理现实的问题，如商业、社会压力对购买决定的影响。为什么你如此强烈地想购买那些价格昂贵的品牌鞋？公益项目"阿福童"的创始人杰鲁·比利莫利亚说："选择立场或者换个思考方式需要有一定的信心"。这个项目旨在帮助儿童获得金融方面的协助，已经有 30 多个国家使用其课程。"这远不止是钱和储蓄的问题"。

## Passage forty-three

Facelift (紧肤术) followed by a week on a beach in Thailand? Hip surgery with a side of shopping in Singapore? Over the last 10 years, Asia's **rise** on the medical tourism **scene** has been quick. Eastern nations **dominate** the global scene. Now Bali wants a **slice** of the action.

The Indonesian island recently opened its first facility specifically **targeting** medical tourists with packages and services, Bali International Medical Centre (BIMC) Nusa Dua. BIMC already has an international hospital in Kuta, which opened in 1998.

The new internationally managed facility offers **surgical** and non-surgical cosmetic procedures and **dental** care.

**Unlike** most of the region's hospitals, BIMC **is designed to** feel more like a spa or resort (度假村）than a medical facility.

The 50-bed hospital has a 24-hour medical **emergency entrance** and hotel-like lobby at the front of the building servicing the hospital's medical, and dental centers.

If you're a celebrity who doesn't want everyone to know you're here for a bit of lipo (吸脂术）, no worries. There's a **private** entrance that leads to the CosMedic Centre, which offers **views** of a golf course.

BIMC has even **teamed up with** the nearby Courtyard by Marriott Bali, which **provides** specific after-care services like **tailor-made** meals and wellness programs for patients.

Latest technology and cool interiors are a start, but breaking into a regional industry that already has some of the world's top international hospitals will be tough, says Josef Woodman, CEO of U.S.-based medical travel consumer guide Patients Beyond Borders (PBB).

"As a **newcomer**, Bali faces stiff **competition** from **nearby** international healthcare providers. To compete, Bali will need to **demonstrate** a quality level of

care and **promote** its services to the region and the world. On the positive side, Bali is **blessed** as one of the region's safest, most popular tourist **destinations**, with a built-in **potential** to attract medical travelers."

The Indonesian island couldn't have picked a better time to get into the game, says PBB. "The world population is aging and becoming wealthier at rates that **surpass** the **availability** of quality healthcare resources," says the company's research.

**【参考译文】**

在紧肤术之后再来一次泰国海滨一周游？在新加坡做臀部手术的同时在那购物？在过去的 10 年中，亚洲的医疗旅游业增长兴起。东方国家主导全球舞台，而现在巴厘岛要想在这一行业中分得一份。

最近，印度尼西亚岛开放了首家专门针对医疗旅游者而提供的包装与服务机构：努沙杜亚巴厘国际医疗中心。在 1998 年，该机构在库塔岛开办了一家国际医院。

这个全新国际化管理的医疗机构不仅为顾客提供外科和非外科的整形术，而且还提供牙科保健服务。

与当地大多数医院不同，巴厘国际医疗中心要让顾客觉得这不只是一家医疗机构，更是一个旅游胜地或度假村。

拥有 50 个床位的医院，设有 24 小时急诊入口，大楼前部是酒店般的候诊厅，为医院医疗中心和牙科中心提供服务。

如果你是名人，不想让他人知道你到此来是为了做吸脂术，不要担心，该机构有专门的隐蔽入口会带领你到达美容医疗中心，在那你可以看到高尔夫球场的的风景。

巴厘国际医疗中心甚至还跟附近的巴厘岛万豪酒店合作，该酒店提供后续特殊服务，比如为病人提供订做的饭菜和健康计划。

最新技术和一流就医环境是一个开始，但是要进入已经拥有世界顶级国际医院的区域产业，将困难重重，美国基础意料旅游消费者指南《患者无国界》的首席执行官约瑟夫·伍德门说道。

作为新手，巴厘需面对来自附近国际医疗机构的激烈竞争。为了竞争，巴厘必须展示出高质量的医疗服务，并向区域和世界推广其服务。从积极方面来看，巴厘被认为是当地最安全、最受欢迎的旅游胜地之一，可以通过内在的潜力吸引医疗旅游者。

PBB 公司认为印度尼西亚岛选择了一个绝好的时机进入到这一行业中。该公司的研究显示，"世界人口正在老龄化和财富增加的速度超过了提供优质的医疗服务资源的能力。"

## Passage forty-four

It is all very well to **blame** traffic **jam**, the **cost** of petrol and the fast **pace** of modern life, but **manners** on the roads are becoming **deplorable**. Everybody knows that the nicest men become monsters behind the wheel. It is all very well, again, to

have a tiger in the tank, but to have one in the driver's seat is another matter. You might **tolerate** the odd road-hog (占道者), but nowadays the well-mannered motorist is **the exception to** the rule. Perhaps the **situation calls for** a "Be Kind to Other Drivers" **campaign**; **otherwise** it may get **completely** out of hand.

Road **courtesy** is not only good manners, but good sense too. It takes the most good-tempered of drivers to **resist** the **temptation** to **hit back** when **subjected to uncivilized** behavior. A friendly nod or a wave of acknowledgement **in response to** an act of courtesy helps to **create** an atmosphere of **goodwill** and **tolerance** so **necessary** in modern traffic conditions. But such acknowledgments of courtesy are all too **rare** today. Many drivers nowadays don't even seem able to **recognize** courtesy when they see it.

**Contrary to** general opinion, young drivers have better manners than their seniors. But this is short-lived in the world of modern driving where many drivers neither **expect** nor give any mercy. This may be **encouraged** on the battlefield but is out of place on the roads.

Lorry drivers say they have almost **abandoned** the practice of signaling cars to **overtake** when the road is clear, because many of the cars took too long to pass. They couldn't be **bothered** to select a lower gear. The car drivers, after overtaking, slowed down again and **hogged** the road. Again, a motoring magazine has recently **drawn attention to** the increasing number of drivers who never wait for **gaps**. "They **manufacture** them by force, using their direction indicators as a **threat rather than** a warning." Punch-ups (打群架) are quite common. It can't be long before we hear of pistols and knives being used.

Driving is **essentially** a state of mind. However technically skilled a driver may be, he can't be an **advanced** motorist if he is always **arrogant** and **aggressive**.

【参考译文】

我们可以抱怨交通拥堵、汽油价格高、现代生活节奏快，但现在道路上的行为规范问题也越来越糟糕。大家都知道，即使最好的人坐在方向盘后都会变成恶人。可以使用虎牌汽油（优质汽油），但要是在驾驶座上放个老虎一样性格的人可就是另外一回事了。你或许容忍得了奇怪的占道者，但当前守规矩的驾驶者实属罕见。或许这种情况需要一场"善待其他驾驶者"的宣传活动，否则的话这种局面就会完全失控。

道路礼仪不仅指得体的行为，还包括良好的意识。遇到不文明行为时，理智的谦让意识能够让大部分脾气温和的驾驶者控制住反击的想法。遇到礼貌之举予以友好的点头或挥手表示感谢，有利于创建友善包容的氛围，这对于当前的交通条件是非常必要的。但这种礼貌的感谢行为当今太少见了。现在许多驾驶者即使遇到也意识不到这种礼貌之举。

与大众观点相反，年轻司机要比年长司机更懂礼貌。但这在当前的驾驶环境中只是一时的，因为许多司机既不期待别人以礼相待，更不会在驾驶时表示谦让。这种行为在战场上是受推崇的，但在道路上是不合适的。

卡车司机说道路通畅时超车前不再发信号，因为超车费时过长，他们都不愿挂低档。轿车司机超车后又会慢慢悠悠地行驶，影响后来者通行。一本汽车杂志也谈到这个问题，最近越来越多的不保持车距的司机引起了人们的关注。"他们

强行占道，把转向灯用作威胁而不是提醒的标志。”打群架是很常见的。用不了多久我们就会见到刀枪相见的道路了。

驾驶本质上是一种心态。驾驶者无论技术高低，如果总是傲慢无礼，那就不是一个高素质的驾驶者。

## Passage forty-five

Many **are aware of** the **tremendous** waste of energy in our environment, but **fail to take advantage of** straightforward opportunities to **conserve** that energy. **For example**, everyone knows that lights should be **switched off** when no one is in an office. **Similarly**, when employees are not using a meeting room, there is no need to **regulate** temperature.

**Fortunately**, one need not **rely on** human **intervention** to conserve energy. **With the help of** smart sensing and network technology, energy **conservation** processes such as **turning off** lights and **adjusting** temperature can be readily automated. **Ultimately**, this technology will **enable** consumers and plant managers **to** better **identify** wasteful energy use and **institute** procedures that **lead to** smarter and more **efficient** homes, buildings and industrial plants.

Until now, wires and cables for power and connectivity have limited the **widespread** adoption of sensor (传感器) networks by making them difficult and **expensive** to install and maintain. Battery-powered wireless networks can **simplify** installation and reduce cost. But their high power **consumption** and the corresponding need for regular battery **replacement** has made wireless networks difficult and costly to maintain. Nobody wants to **replace** hundreds or thousands of window sensor batteries in a large building on a regular basis.

The **promise** of wireless sensor networks can only be fully **realized** when the wiring for both the data **communication** and the power supply is **eliminated**. Doing so **requires** a true battery-free wireless **solution**, one that can **utilize** energy harvested directly from the environments. To **facilitate** the widespread deployment of wireless sensor networks, GreenPeak has developed an ultra-low-power communication technology that can utilize environmental energy sources such as light, motion and vibration. This technology, **employing** on-board power management circuits and computer software to **monitor** energy harvesters and **make the best use of** harvested energy, enables sensors to **operate** reliably in a battery-free environment.

Wireless sensor networks deployed in our offices and homes will **have an enormous impact on** our daily lives, helping to build a smarter world in which energy is **recycled** and fully utilized. These wireless platforms, **equipped with advanced** sensing capability, will enable us to better control our lives, homes and environments, creating a truly connected world that enables people worldwide to live in a more comfortable, safer, and cleaner environment.

【参考译文】

许多人都知道环境中巨大的能源浪费，却未能利用简单的方式来节约能源。比如谁都知道办公室没人时要关灯。同样地，员工不使用会议室时，室温就不需要调节。

幸运的是，我们无需人为干预就可以实现节能的目的。在智能感应和网络技术的帮助下，像关灯和调控室温的这些节能事项可以轻而易举地实现自动化调控。这项技术最终会帮助消费者和工厂管理者更好地识别出能源浪费现象，建立使住宅、建筑和工厂更加智能化、高效化的程序。

直到目前为止，用来供电和连接的电线和电缆限制了传感器网络的广泛使用，因为安装和维修电线和电缆不仅难度大而且造价高。靠电池供电的无线网络可以简化安装，降低费用。但耗电大和定期更换电池的问题使无线网络维修难度大、费用高。没人愿意对一整栋大楼中几十万枚室内窗感电池进行定期替换。

只有取消用于数据通讯和电力供给的配线才能真正实现无线感应网络。这需要一个不依赖电池的无线解决方案，也就是直接从环境中汲取能源。为加快无线传感器网络的普及，绿峰研究出一项超低功耗、靠光、位移和震动等供电的通讯技术。这项技术使用电路板电力管理线路和计算机软件监控能源采集者，最大化使用采集来的能源，这样感应器就可以在不依赖电池的环境中有效地发挥功能。

办公室和家中使用的无线感应网络会对日常生活的影响巨大，有助于建立一个能源循环利用的智能化世界。这些无线平台感应力超强，会帮助我们管理好生活、家庭和环境，创建出一个真正连通的世界使世界各地人们都可以生活在一个更加舒适、安全和整洁的环境中。

## Passage forty-six

We all know people who say they have "no sense of direction." Yet for some people that **description** is true in all **circumstances**: If they take a single wrong turn on an **established route** they often become totally lost. This happens even when they are just a few miles from where they live.

This condition is called developmental topographic disorientation (DTD), the **inability** to **orient** within the environment. It didn't even have a **formal** name until 2009, when Giuseppe Iaria reported his first case in the **journal** Neuropsychologia.

Ellen Rose had been a **patient** of mine for years before I **realized** that she had this life-long learning **disability**. Like other people with DTD, she can follow a route in pieces, but it never becomes part of a larger **spatial** understanding. That's because she does not have a larger spatial understanding of her environment.

I asked her to **draw** a diagram of the second floor of the house she shares with her daughter and son-in-law. It was a difficult task for her (she lives on the first floor but is very familiar with the second). She **described** her effort not as a bird looking down from above, but as a spider crawling across the paper tracing a route from one room to the next.

Ellen has always wondered what was wrong with her. She knew that when others **ascribed** her problems **to** simply not **paying attention** they were mistaken. She worried that her problems in traveling might be a sign of something more serious than just getting lost easily, but **had no idea** what that might be.

Finding out that she had DTD was a **relief**. Knowing that something has a name can be a **liberating** experience. All of a sudden it is a thing, a **concept** with defining characteristics. It is in a way, a kind of map.

【参考译文】

我们都知道有人说他们“没有方向感”。但是对于某些人来说，这种描述在所有情况下都是正确的：如果他们在既定路线转错了一次弯，则往往会完全迷失方向。即使距离他们居住的地方只有几英里，也会发生这种情况。

这种情况称为发育性地形定向障碍（DTD），即无法在环境中定向。直到2009年，朱塞佩·伊亚里亚（Giuseppe Iaria）在《神经心理学》杂志上报道了他的第一例病例后，它才正式取名。

艾伦·罗斯成为我的病人好几年后，我才意识到她有这种终身学习障碍。像其他患有DTD的人一样，她可以分段行走，但永远不会成为更大空间理解的一部分。那是因为她对自己的环境没有更大的空间了解。

我请她在与女儿和女婿同住的房子的二楼画一张图。这对她来说是一项艰巨的任务（她住在一楼，但对二楼非常熟悉）。她将自己的努力描述为不是一只鸟从上方俯视，而是一只蜘蛛在纸上爬行，描绘着从一个房间到另一个房间的路线。

艾伦一直想知道她出了什么问题。她知道，当其他人将自己的问题归因于根本不注意时，他们就错了。她担心自己在旅行中出现的问题可能预示着一些更严重的问题，而不仅仅是容易迷路，但她不知道那是什么。

得知她患有DID是种宽慰。知道某事有名字可以是一种解放的经历。突然之间，这是一个事物，一个具有定义特征的概念。在某种程度上，它是一种地图。

## Passage forty-seven

You've probably heard a lot more about"e-Sports"lately. Major television networks are broadcasting competitions, and even more **mainstream** media coverage is **planned** for the near future. What are e-Sports and why are they so popular?

**Loosely** defined, e-Sports are video game **competitions**. These can be anything from a local **tournament**（锦标赛）in a video game store to those staged in 25, 000-seat arenas, watched live by millions of people around the world. In **practical** terms, “e-Sports"refers to the competitions **engineered** by global organizations that **culminate in** big-money championship tournaments---dollar **figures** that can **exceed** $1, 000,000 for winners.

The second question--"why are they getting so **popular**?"---is more **nuanced**. The biggest reason is that fans of games enjoy watching them played at the highest level. It's fun seeing the top players in the world do what they do best. There are plenty of other reasons the e-Sports **community** is growing. All of the **controversies**, drama, and **compelling individuals** from the mainstream sports world **exist in** e-Sports as well. Top players move from team to team like free agents, **retire** and return to competition **unexpectedly**, and experience unlikely come-from-behind victories and crushing defeats. New challengers **consistently emerge** on the scene,

ready to take down championship teams and **generate** compelling rivalries. The parallels with **traditional** sports and e-Sports are more **numerous** than many realize.

**Perhaps** the biggest difference between traditional sports and e-Sports is the viewers. Unlike mainstream athletic competitions, consumers of e-Sports are **overwhelmingly** young and male. For example, over 70 percent of League of Legends viewers are **males**, and the vast **majority** of them are under 26. This means a couple of things, both of them **appealing to** advertisers looking to reach this young and **profitable** market--the audience will grow as more youngsters are **introduced**, and as they get older, their **purchasing power** Increases.

【参考译文】

关于“电子竞技”，你最近可能听闻很多。主要的电视网络都正在播放电子竞技比赛，而且在不久的将来，将有更多主流媒体会对此进行报道。那么什么是“电子竞技”？为什么它这么受欢迎？

从广义上来说，电子竞技指的是电子游戏比赛。它可以是在电子游戏商店内举行的地方性锦标赛，也可以是在拥有 25000 个坐席的竞技场举行的大型直播赛事，由全世界数百万人观看。实际上，“电子竞技”指的是由国际组织发起的奖金丰厚的世锦赛--赢家能在这些比赛中获取超过 100 万美元的奖金。

第二个问题--“为什么它们这么受欢迎？”----更复杂。最大的原因是，游戏的粉丝们喜欢观看最高水平的赛事。观看世界顶级选手，竭尽全力，彼此较量，很有趣。电子竞技玩家人数增长还有很多其他原因。“电子竞技”界中也存在主流体育世界中存在的争议、戏剧性的事件以及引人注目的个人。顶级选手就像自由无约的职业队员一样从一个团队跳槽到另外一个团队，以大众意想不到的方式退役或是复出，经历看似不可能的逆风翻盘或是惨败。并且新的挑战者不断涌现，随时准备拿下冠军队伍，形成激烈的竞争。传统体育和“电子竞技”的相似之处比许多人认识到的要多很多。

也许传统体育和“电子竞技”之间最大的区别是观众。与主流体育比赛不同的是，“电子竞技”的消费者绝大多数是年轻人和男性。例如，超过 70%的《英雄联盟》的观众是男性，其中绝大多数在 26 岁以下。这意味着，随着越来越多年轻人的加入，观众将会增加，并且随着年龄的增长，他们的购买力也会增加—这些都吸引着想要进入这个年轻且有利可图的市场的广告商。

# Passage forty-nine

In 1902, Georges Mé s made and released a movie called A Trip to the Moon. In this movie, the spaceship was a small capsule, **shaped** like a bullet, that was **loaded** into a **giant** cannon and aimed at the moon.

This movie **was based on** a book that came out many years earlier by an author named Jules Verne. One of the fans of the book was a Russian man, Konstantin Tsiolkovsky. The book made him think. Could one really shoot people out of a cannon and have them get **safely** to the moon? He decided one couldn't, but it got him **thinking of** other ways one could get people to the moon. He **spent** his life considering this problem and **came up with** many solutions.

Some of Tsiolkovsky's **solutions** gave scientists in America and Russia ideas when they began to think about space travel. They also thought about airplanes they and other people had made, and even big bombs that could fly themselves very long distances.

Many scientists spent years working together to **solve** the problem. They drew and discussed different designs until they agreed on the ones that were the best. Then, they built small models of those designs, and tested them until they felt ready to build even bigger models. They made full-scale rockets, which they **launched** without any people inside, to test for **safety**. Often the rockets weren't safe, and they **exploded** right there on the launch pad, or **shot off** in crazy directions like a balloon that you **blow up** and **release** without tying it first. After many, many tests, they started to send small animals into space. Only after a long time did they ever put a person inside a rocket and **shoot** him into space.

Even after they began sending people into space, scientists were still trying to **improve** the shape of the rockets. The design changed many times, and **eventually ended up** looking like a half-rocket and half-airplane. The machine called space shuttle **was used for** many years. Now, the government lets **private** companies try their own designs for spaceships, and they have come up with many different, crazy-looking machines.

【参考译文】

1902 年，乔治·梅里爱制作发行了一部名为《月球之旅》的电影。在这部电影中，宇宙飞船是一个形似子弹的小型太空舱，被装载进一个巨大的大炮，瞄准了月球。

这部电影是根据作家儒勒·凡尔纳多年前的书创造。这本书的书迷中有个叫康斯坦丁·齐奥尔科夫斯基的俄罗斯人。这本书引发了他的思考。真的能用大炮把人发射出去，让他们安全地登上月球吗？他认为不可能，但这让他思考其他可以让人们登上月球的方法。他一生都在考虑这个问题，并提出了许多解决方案。

当美国和俄罗斯的科学家们开始思考太空旅行的时候，齐奥尔科夫斯基的一些解决方案给了他们一些创意。他们也想到了他们和其他人已经制造出来的飞机，甚至还有能远距离飞行的大炸弹。

许多科学家花了数年的时间共同努力来解决这个问题。他们起草并讨论了不同的设计，直到得到他们认为最好的方案。然后，他们按照这些设计建造了小模型，并对这些模型反复进行测试，直到他们觉得已经准备好建造更大的模型为止。他们制造了与实物一样大小的火箭，进行了无人火箭发射，以测试安全性。通常火箭是不安全的，它们会就在发射台上爆炸了，或者像吹起的气球还没系住就疯狂地四处乱飞了。经过许多次的测试，科学家们开始把小动物送入太空。又过了很长一段时间之后，他们才把一个人放进火箭，把他送入太空。

即使在科学家们开始把人送入太空之后，他们仍在努力改进火箭的形状。这个设计改变了很多次，最终看起来像是半火箭半飞机的形状。这台叫做航天飞机的机器已经用了很多年了。现在，政府允许私人公司为宇宙飞船做自己的设计，而这些私人公司已经设计出了许多不同的、看似疯狂的机器。

## Passage fifty

Experts say **distracted** walking is a **growing** problem, as **people of all ages** become more **dependent on** electronic devices for personal and professional matters. They also **note** pedestrian deaths have been rising in recent years, 11% of all US deaths involved pedestrians, but that number rose to 15% in 2014.

The rise in deaths **coincides with** states introducing bills that **target** pedestrians. Some states, such as Hawaii, Arkansas, Illinois, Nevada and New York, **continue to introduce legislation** every year.

The **measure** recently introduced by New Jersey **assembly** woman Pamela Lampitt would **ban** walking while texting and **prohibit** pedestrians on public roads from using **electronic** communication devices **unless** they are hands-free. **Violators** would face fines of up to $50, 15-day **imprisonment** or both, which is the same **penalty** as **jaywalking**(乱穿马路). Half of the fine would be **allocated** to safety education about the dangers of walking while texting, said Lampitt.

Some see the **proposal** as an **unnecessary** governing overreach, while others they understand Lampitt's **reasoning**. But most agree that people need to be made **aware of** this **issue**. "Distracted pedestrians, like distracted drivers, present a **potential** danger to themselves and drivers on the road," Lampitt said. "An **individual** crossing the road distracted by their smartphone presents just as much danger to motorists as someone jaywalking and should be held, at **minimum**, to the same penalty."

The main question **raised** about the measure, though, is whether it can be **enforced consistently** by police officers who usually have more **pressing** matters to **deal with**. Some feel that **rather than** imposing a new law, the state should **focus on** distracted-walking education. Lampitt said the measure was needed to stop and **penalize** "**risky** behavior". She **cited** a National Safety Council report that showed distracted walking incidents **involving** cellphones **accounted for** an estimated 11,101 injuries from 2000 to 2011.

The study found a **majority** of those injured were female and most were 40 or younger. Talking on the phone was the most **prevalent** activity at the time of injury,

while texting accounted for 12%. **Nearly** 80% of the injuries **occurred as the result of** a fall, while 9% occurred from the pedestrian **striking** a motionless object.

【参考译文】

专家表示：随着各个年龄段的人们变得更加依赖电子设备来处理个人以及工作事务，走路分神成为一个日益严重的问题。他们还注意到，近些年，行人死亡的数目一直在增加，美国行人死亡人数占总死亡数目的比例由之前的 11%升至 2014 年的 15%。

死亡数目上升的同时，几个州出台针对步行者的法案。像夏威夷州，阿肯色州，伊利诺斯州，内华达洲和纽约市每年不断出台相关法律法规。

最近，由新泽西州议会女议员帕梅拉·兰皮特提议的措施是：禁止边走路边发短信；行人不允许在公路上使用电子通讯设备，除非空着双手。违反者处以上限 50 美金罚款或十五天监禁或两者并罚，这和乱穿马路的处罚规定是一样的。兰皮特表示：一半罚金将会用于安全教育，告诉人们边发信息边走路的危险。

有些人视提议为不必要的过度管制，有些人认为兰皮特分析的有道理，但更多的人同意需关注这个问题。“行人走路分神如同司机开车分神，一样会给他们自己和公路上司机带来潜在威胁”，兰皮特说，“边玩智能手机边过马路的行人和乱穿马路一样会对汽车驾驶员造成危险，理应至少处以同样的处罚。”

但这个措施存在的主要问题是能否被警察坚持贯彻实施，因为警察们通常有更紧急的事情等待他们处理。一些人认为，关键应该加强走路分神危险性教育，而不是制定新的法规。可是兰皮特表示：采取措施来阻止和惩罚“危险行为”是非常必要的。她引用国家安全局的报告，报告显示，2000 到 2011 年间，行人因玩手机走路分神受伤人数达到 11101 人。

研究发现受伤人群多是女性，并且年龄多在 40 岁以下。她们在遭到伤害时，大都在用手机通话，12%在发短信。80%的受伤事故是跌倒所致，9%是由于行人撞倒了静止物体。

## Passage fifty-one

Vancouver is the best place to live in the **Americas**; **according to** a quality-of-life ranking **published** earlier this month .The city **regularly tops** such indexes as its clean air, **spacious** homes and weekend possibilities of sailing and skiing. But its status as a **liveable** city **is threatened by worsening congestion** (拥挤). Over the next three decades, another 1 million residents are expected to live in the Greater Vancouver region, adding more cars, bicycles and lorries to roads that are already **struggling to** serve the existing 2.3 million residents.

A **proposal** by Vancouver’s mayor **seeks to** prevent the worsening conditions. **Upgrades** would be made to 2,300 kilometers of road lanes, as well as bus routes and cycle paths. Four hundred new buses would join the **fleet** of 1,830. There would be more trains and more “sea bus” **ferry** crossings between Vancouver and its **wealthy** northern **suburbs**. To get all that, residents must **vote to** accept an increase in **sales** tax, from 7% to 7.5%. Polls **suggest** they will vote no.

Everyone agrees that a more **efficient** transport system is needed. **Confined** by mountains to the north, the United States to the south and the Pacific Ocean to the west, Vancouver has **spread** in the only direction where there is still land, into the Fraser Valley, which just a few decades ago was mostly farmland. The road is often **overcrowded**.

Yet commuters' **suspicion** of local bureaucrats may **exceed** their dislike of congestion. TransLink, which runs public transport in the region, is unloved by taxpayers. Passengers **blame** it when Skytrain, the light-rail system, comes to a standstill because of mechanical or electrical faults, as happened twice in one week last summer, leaving commuters **stuck** in carriages with nothing to do but expressing their **anger** on Twitter. That **sort of** thing has made voters less **willing to** pay the C$7.5 billion in capital spending that the ten-year trafficupgrade would involve.

**Despite** the **complaints**, Vancouver's transport system is a decent, well-integrated one on which to build, **reckons** Todd Litman, a transport **consultant** who has worked for TransLink. "These upgrades are all-important if Vancouver wants to **maintain** its reputation for being a destination others want to go to." He says.

【参考译文】

根据本月初公布的一份生活质量排名表显示，温哥华是北美洲最佳居住城市。该城市因为其干净的空气，宽敞的住宅以及周末可以航海、滑雪而经常名列榜首。但其作为宜居城市的地位受到了每况愈下的交通拥挤的威胁。未来的 30 年，预计还会有 100 万人口住进大温哥华地区，这就给服务于现有的 230 万居民，本身就苦不堪言的道路增加更多的车辆，自行车和卡车。

温哥华市市长提出建议，旨在防止恶化的交通状况。该建议包括改造 2.3 千米的道路车道，公交线路和自行车道。在原有的 1,830 辆公交车的基础上增加 400 辆新公交车。在温哥华和富裕的北部郊区之间，将有更多的火车及"海上巴士"渡口。为了实现上面这些目标，居民们必须投票同意将销售税从 7%提高到 7.5%。民意调查显示他们将投反对票。

人们都认可更高效的运输系统是必须的。温哥华北邻山脉，南邻美国，西邻太平洋。温哥华只能朝着还有土地的唯一方位进行蔓延，也就是菲沙河谷，这个地方在多年以前大多是农田，那里的道路十分拥挤。

然而，上班族对当地官员的怀疑已经超过了他们对交通拥堵的厌恶。运输联线，是一家经营该地区的公共交通的服务机构，不受纳税人爱戴。乘客抱怨，由于机械或电气故障使空中列车（一种轻轨系统）陷入停顿。该故障去年夏天一周里发生了两次，使得上下班人员困在车厢内什么都做不了，只能在推特上表达自己的愤怒。类似的事情使选民不愿意华花费 75 亿加元去支付为期十年的交通升级成本。

托德·利特曼，运输联线的一名交通顾问，认为尽管有诸多抱怨，但是温哥华的交通仍然是相当不错的、整合良好的工程。他说："如果温哥华想要保持其作为一个人人想要去的目的地的名气，这些改造是非常重要的。"

# Passage fifty-two

**Cheating** is nothing new,But today, educators and administrators are finding that **instances** of academic **dishonesty** on the part of students have become more **frequent** -and are **less likely to** be punished - than in the past. Cheating **appears to** have **gained acceptance** among good and poor students alike.

Why is student cheating on the **rise**? No one really knows. Some **blame** the **trend** on a **general** loosening of **moral** values among today's youth. Others have **attributed** increased cheating **to** the fact that today's youth are far more **pragmatic**(实用主义的)than their more idealistic predecessors. **Whereas** in the late sixties and early seventies，students **were filled with** visions about changing the world, today's students feel great pressure to **conform** and succeed. In interviews with students at high schools and colleges around the country, both young men and women said that cheating had become easy. Some suggested they did it out of **spite** for teachers they did not respect. Others looked at it as a game. Only if they were caught, some said, would they feel **guilty**. "People are **competitive**," said a second-year college student named Anna, from Chicago. There's an **underlying** fear. If you don't do well, your life is going to **be ruined**. The pressure is not only form parents and friends but from oneself. To achieve .To **succeed**. It's almost **as though** we have to **outdo** other people to **achieve** our own **goals**.

Edward Wynne, a magazine editor, **blames** the rise in academic dishonesty on the schools. He claims that administrators and teachers have been too **hesitant** to **take** action**.** Dwight Huber, **chairman** of the English department at Amarillo, sees the matter differently, blaming the rise in cheating on the way students are **evaluated**. "I would cheat if I felt I was being cheated," Mr. Huber said. He feels that **as long as** teachers gives short-answer tests rather than essay questions and rate students by the number of facts they can **memorize** rather than by how well they can put information together, students will try to **beat** the system. "The concept of cheating is based on the **false assumption** that the system is **legitimate** and there is something wrong with the individual who are doing it," he said. "That's too easy an answer. We've got to start looking at the system."

【参考译文】

作弊现象不算是新话题。但如今，教育者和管理者们发现与过去相比，学生身上发生的学术作弊实例更加频繁了，而其受到惩罚的可能性却变小了。似乎不论成绩优劣，学生们都认可了作弊的行为。

为什么学生作弊现象会增多呢？没有人知道确切原因。有些人将之归咎于现代青年人道德价值观普遍下降。另一些人则将之归咎于这样一个事实：相比理想主义的前辈，现在的学生更加实际。在 60 年代末 70 年代初，学生们立志于改变世界，现如今的学生则承受着融入社会并获得成功的巨大压力。在对国内高中生以及大学生进行的采访中，我们发现，不论是男生还是女生都认为作弊变得越来越容易了。有些学生说他们作弊是出于对自己不喜欢的老师的敌意，而有些学生则把作弊当作游戏。有些人认为只有被逮到的时候才会感到羞愧。来自芝加哥的

大二学生安娜表示，人与人之间的竞争太强烈了。学生们有一种潜在的恐惧感。如果你考试中无法取得好成绩，你的前途就毁了。压力不仅来自父母和朋友，同时也来自于自己。我们渴望实现目标，获得成功。似乎我们必须超过其他人才能实现我们自己的目标。

某杂志编辑爱德华·魏恩把学术欺骗的增加归咎于学校。他认为学校管理人员以及老师们总是犹豫不决，没有采取任何措施。阿马里洛学校英语系主任德怀特·休伯却不这么认为，他把这种上升趋势归咎于校方评估学生的方式。休伯说:“如果我感到自己被欺骗了，我也会选择欺骗。”他认为在考试中只要老师出的是简答题而非问答题，是根据学生记住事实的数量给分而不是考察他们综合信息的能力，学生们就会设法击败该制度。“作弊这个概念基于一个错误的假设：评估体系是合理的，要是有人舞弊，一定是他自己出了问题。”他说，“这个答案太简单了。我们应该审视一下我们的评估体系。”

## Passage fifty-three

For many of us, asking for help is a difficult **concept**. We may feel **as if** we are **admitting** a **weakness** that the world would not have known about, had we not asked for help.

**Ironically**, it's been my experience that people who are able to **deliver** well-positioned **requests** for help are seen as very **strong individuals**. When they **demonstrate** the **humility**（谦卑）to ask for help, they **earn** the **respect** of others. People who **receive** a **heartfelt** request for help are usually **honored** by the request. **In turn**, we are **strengthened** by the very help that is **provided**.

One of my clients (we'll call her Kira) recently **made a shift** in how she was **interacting with** her boss. When asked to **prepare presentations**, she **assumed** that she **was expected to** go away, develop the content, deliver it at the required meeting and then wait for feedback from her boss. Her boss was highly regarded for the **impact** of his presentations, **while** Kira often felt that her presentations were lacking. When she took a hard look at how this approach was working for her, Kira **recognized** that she had not yet **made use of** her boss's **support**. She could learn far more about creating **attractive** presentations by walking through a **draft** with her boss-focusing on the content plus her delivery-and **obtaining** feedback earlier in the process rather than at the back end. So she made the request for his support.

The outcome? Her boss was **delighted** to **coach** Kira and was **enthusiastic** about the opportunity to **put into use** his own strength by teaching presentation skills more effectively to her. By taking the time to work together on preparation for a number of Kira's key presentations, she **benefited from** her boss's **thought** process and was able to **distinguish** the **critical components** to **enhance** her own presentations. Kira's presentations now have punch!

Some of us are **uncomfortable** asking for help because we believe that our request **places burdens on** the other person. Ironically, we may be missing an opportunity to show others how we **value** and **respect** them. People who know you and think well of you are often highly **motivated** to help. **Furthermore**, the more

**specific** you can be about what you need from them, the easier it is for them to **assist** you.

【参考译文】

对我们大多数人而言，求助是一个困难的主意。我们会认为这是在承认自己的弱点，如果不求助，这个弱点就不会展现出来。

很讽刺的是，以我的经验，能恰当传达求助的人被认为是能力很强的。当他们展现谦卑，寻求帮助后，他们也赢得了他人的尊重。收到真诚求助的人们也会为此感到荣幸。相应的，我们也会因为别人提供的帮助而壮大实力。

我的一个客户（我们称为基拉)最近在和老板的沟通上就有了转变。当被要求准备报告时，她估计自己应该出去自己找内容并按照要求提交到会议上，并等待老板的反馈。她老板
因其出色的演讲影响力而受人尊重，而基拉经常觉得她的演讲有很多不足之处。当她仔细思考自己如何用老板的方法来提高自己的演讲能力时，基拉意识到，自己尚未向老板寻求帮助。通过和老板排演讲稿，她可以学到更多关于写出有吸引力演讲的知识—注重内容和演讲方式—她应该在早期而不是在最后得到反馈。所以她请求老板帮助她。

结果？老板很乐意教她，还十分热情地把自己擅长的演讲技能倾囊相授给她。通过一段时间共同努力帮助基拉做出一些关键报告以后，基拉从老板的思维中获益良多，也能辨认出提升报告质量的关键因素。她的报告现在十分有说服力。

一些人对寻求帮助感到不舒服，因为我们以为这会给别人带来负担。令人讽刺的是，我们可能失去一个向他人展示珍视并尊重他们的机会。理解你并看好你的人经常会很有动力帮助你，并且，你提出的需求越具体，他们就越容易帮你。

## Passage fifty-four

On how the world has changed over the last 50 years, not all of it has been good. As you are **looking for organic** food information, you have **obviously become aware that** a better **alternative** exists and you are **taking a critical look at** the source and production **practices** of the companies producing the world's food supplies.

The **purpose** of organic food information is to give you an **understanding** of what is going into your food. You will see that there are many **benefits** to organic food that you didn't know before. The **basis** behind **knowing about** organic food information is the fact that farmers are **resorting to** using **artificial** fertilizers and pesticides (杀虫剂) to **control** disease and **insect attack** in order to produce more crops to **satisfy growing demand**. These artificial fertilizers leave something **poisonous** in and on the fruit and vegetables we **consume** which **in turn** is **absorbed** and **stored** by our bodies.

**Even** the **quality** of food has **gone down** in recent years. Today's fruits have **nowhere near** the Vitamin C levels they did at one time. However, with organic food information you learn that organic food has fifty **percent** more **nutrients**, **minerals**

and **vitamins** than any other **form** of **produce** that has been grown under **intensive** farming. If you are eating non-organic produce you will have eat more fruit **in order to make up for** this **deficiency**. But then the **dangerous cycle continues** since you will be eating more **chemicals** that are **worse** for your health than they are good for you.

Another **aspect** of organic food information is the **production** of meat and poultry (家禽). Most only consider produce **when it comes to** organic food information **disregarding** the **antibiotics** and hormones that are given to both cattle and poultry that are being force **fed**. Ask yourself what **happens to** all these antibiotics and hormones when the animals is killed, the **remaining** of these antibiotics and growth hormones **reside in** the meat which are then consumed, **digested** and stored in human bodies. **There is no way that** an animal that isn't kept in **healthy** conditions can produce healthy food for humans to eat.

You have nothing to lose by trying organic product, **not only** will it be healthy for you **but** you will **also be able to** eat produce and meat the way they **are supposed to** be. You will **likely be so impressed with** the taste of organic fruit that you will never **return to** the **mass-produced** fruit again. While cost and availability can be a big issue for some, you can do a bit of research online and find a local store that stocks organic produce for a **reasonable** price.

纵观 50 年来世界的发展变化，并不是一切都朝着好的方向发展。搜索有机食品信息时，你会清楚地意识到有一种更好的选择，而且你自己也在用批判的眼光审视着食品的来源，以及那些为全世界供给食物厂家的生产实践。

了解有机产品的目的在于让你了解食品构成。你会看到许多以前你不知道的有机食品的益处。对于有机食品你要了解这样一个基本事实：农场主要生产更多粮食来满足不断增加的需求，不得不使用人工化肥和杀虫剂控制病虫害侵袭。人工化肥中的有毒物质残留在蔬菜水果中，然后被人体吸收储存。

食品质量近年来甚至也下降了。现在的水果中维他命 C 含量远远低于过去水平。然而，从有机产品的信息可以得知，有机产品的营养、矿物质和维他命含量比集约型种植的农产品高出 50%。如果吃非有机食物的话，那么就需要增加摄入量，来补充缺少的这些营养物质。但这样会继续恶性循环，因为会摄取的更多对健康有害的化学物质，对你来说弊大于利。

了解有机食品时还要了解的肉类和家禽的生产。大部分人一说到有机食品，只会想到农产品本身，想不到牛和禽类饲养过程中强行喂入的抗生素和激素。想想屠宰牲畜时这些抗生素和激素会发生什么变化吧。抗生素和生长激素的残余物会遗留在肉体中，然后被人体吃掉、消化、储存起来。处于不健康状态的动物根本不可能产出健康的食物供人类食用。

选择有机食品不会对我们有什么损失，不仅有益健康，而且还可以吃到绿色纯天然的农产品和肉类食品。你也会迷上有机水果的味道，以后不想再吃集约化生产的水果了。有些地方价格可能会高，也可能没有有机产品可售，你可以在网上查查，找找当地哪家商店有存货，同时价格又比较公道。

# Passage fifty-five

If you haven't heard or seen anything about Road **Rage** in the last few months you've probably been **avoiding** the media. There have been **countless** stories about the new and **scary** phenomenon, **considered** a type of **aggressive** driving. You have more likely **encountered** aggressive driving and/or Road Rage **recently** if you drive at all.

While **drunk** driving **remains** a **critical** problem, the facts about aggressive driving are **surely** as **disturbing**. **For instance**, **according to** the National Highway Transportation Safety Association, 41,907 people died on the highway last year. **Of** those fatalities, the agency estimates that about two-thirds were **caused** at least **in part** by aggressive driving behavior.

Why is this phenomenon **occurring more than** ever now and why is it something that seemed almost **nonexistent** a few short years ago? Experts have several **theories**, and all are **probably partially** correct. One **suggestion** is **sheer overcrowding**. In the last decade, the number of cars on the roads has increased by more than 11 percent, and the number of miles driven has increased by 35 percent. However, the number of new road miles has only increased by 1 percent. That means more cars in the same amount of space; and the problem is **magnified** in **urban** areas. Also, people have less time and more things to do. With people working and trying to **fit** extra chores (琐事) and activities **into** the day, stress levels have never been higher. Stress creates **anxiety**, which leads to **short tempers**. These factors, when **combined** in certain situations, can spell Road Rage.

You may think you are the last person who would drive **aggressively**, but you might be surprised. For instance, have you ever **yelled out** loud at a slower driver, sounded the horn long and hard at another car, or **sped up** to keep another driver from passing? If you **recognize** yourself in any of these situations, watch out!

Whether you are getting **angry** at other drivers, or another driver is **visibly upset with** you, there are things you can do to **avoid** any major **confrontation**. If you **are susceptible to** Road Rage, the key is to **discharge** your emotion in a **healthy** way. If you are the target of another driver's rage, do everything possible to **get away from** the other driver safely, including avoiding eye **contact** and **getting out of** their way.

【参考译文】

如果近几个月没有听过或见过"路怒症"这类事，你有可能一直没关注媒体。这种新兴而又可怕的现象，媒体里报道过无数次了，认为这是一种冲动的驾驶行为。如果开车的话，遇见这种事的机会就更多了。

酒驾一直是个危险问题，但是冲动驾驶一样令人烦恼。例如，根据美国高速交通安全协会报告可知，去年高速公路的死亡人数达到 41907 人，并估计其中三分之二事故原因与冲动驾驶行为有部分关系。

为什么这种现象前几年很少听说，现在却愈演愈烈呢？专家有几种推测，而且都可能是部分正确的。其中一种说法是道路过于拥挤造成的。过去十年，车流量增长幅度超过了 11%，行驶里程数增加了 35%。但新建公路英里数只增加了 1%。这就是说同样大小空间内的车多了。这个问题在城市表现更加明显。而且人们的时间越来越少，要做的事却越来越多。上班族每天还要应对额外的琐事和活动，因此压力达到峰值。压力引发焦虑，脾气也变得易怒。这些因素一旦在特定情境下同时出现，就会引发“路怒症”。

你或许认为自己才不会成为冲动驾驶的人，但事实也许会让你大吃一惊。举个例子，你有没有向开车慢的驾驶员大喊大叫过？有没有冲别的车使劲鸣长笛？或是加速不让别的驾驶员超车？如果发现自己确实经历过这些情况，那就要注意啦！

无论是你对别的驾驶员发火还是别人明显地想找你茬儿，你可以做些事来避免冲突。如果你容易受到“路怒症”的影响，那就得以健康的方式发泄情绪。如果有人对你发火，你应该尽量安全地躲开对方，包括避免眼神接触，主动让道。

## Passage fifty-six

Face masks are one of the best **defenses** against the spread of COVID-19, but their **growing adoption** is having a **second**, **unintended** effect: breaking **facial recognition** algorithms(算法）。

Wearing face masks that **adequately** cover the mouth and nose **causes** the error rate of some of the most widely used facial recognition algorithms to **rise** to between 5 percent and 50 percent, a study by the US National Institute of Standards and Technology (NIST) has found. Black masks were more likely to cause errors than blue masks, and the more of the nose covered by the mask, the harder the algorithms found it to **identify** the face.

“We need to understand how face recognition technology **deals with** masked faces,” said the **author** of the report and NIST computer scientist. “We have begun by **focusing on** how an algorithm developed before the **pandemic**(大流行病）might be **affected** by **subjects** wearing face masks. Later this summer, we **plan to** test the **accuracy** of algorithms that were **intentionally** developed with masked faces in mind.”

Facial recognition algorithms **such as** those tested by NIST work by **measuring** the distances between **features** in a target's face. Masks **reduce** the accuracy of these algorithms by **removing** most of these features, although some still remain. This is slightly **different from** how facial recognition works on iPhones, **for example**, which use **depth** sensors for extra security, **ensuring** that the algorithms can't be fooled by showing the camera a picture (a danger that is not present in the scenarios NIST is concerned with).

Comment 1

Well, that's one good thing to come out of the pandemic. **Mass surveillance** is **nonsense**. Time to **pair** masks up with sunglasses to **deliver** the **decisive stroke**.

Comment 2

" Wearing face masks that adequately cover the mouth and nose causes the error rate of some of the most widely used facial recognition algorithms to rise **sharply**" Rubbish technology! I would've never guessed.

Comment3

There's a reason why some country is already using gait（步态）analysis. Facial recognition is too easy to block or to fool.

Comment 4

Pretty soon they are going to do...analysis. With the development of AI, there will be a way out.

Comment 5

The AI's getting better, though, so soon it won't matter. Just like how you can **pick out** a relative or close friend even in bad CCTV footage, so too can AI. Your height, walking gait, mannerisms, voice, ears, clothing, etc, all add up to YOU.

【参考译文】

口罩是抵御 COVID-19 传播的最佳防御方法之一，但是其日益普及的使用具有第二种意想不到的效果：打破面部识别算法。

美国国家标准技术研究院（NIST）进行的一项研究发现，佩戴能充分覆盖口和鼻的口罩会导致一些最广泛使用的面部识别算法的错误率上升到 5％至 50％之间 。与蓝色口罩相比，黑色口罩更容易引起错误，并且面具遮盖的鼻子越多，算法识别人脸的难度就越大。

报告的作者和 NIST 计算机科学家说：“我们需要了解人脸识别技术如何处理蒙面人脸。”“我们首先关注的是戴大口罩的受试者可能会对大流行病之前开发的算法产生影响。今年夏末，我们计划测试特意开发的算法的准确性，这些算法考虑到了戴口罩的面部问题”

面部识别算法，诸如 NIST 测试的那些算法，通过测量目标人物面部特征之间的距离来工作。口罩遮住了大部分特征，从而降低了这些算法的准确性，尽管有些特征仍然存在。这与面部识别在 iPhone 上的工作方式稍有不同，例如，iPhone 使用深度传感器提供额外的安全性，从而确保算法不会因为向摄像头展示的图片而被愚弄（在 NIST 场景中不存在这种危险）。

评论 1

好吧，这也是大流行病的一个好现象。大规模监视是胡说八道。是时候戴上口罩与太阳镜，来决定性一击了。

评论 2

“戴上足以掩盖口鼻的口罩会导致一些最广泛使用的面部识别算法的错误率急剧上升”垃圾技术！我怎么也想不到。

评论 3

某些国家已经在使用步态分析是有原因的。面部识别太容易被遮挡或被愚弄了。

评论 4

很快他们将要做...分析。随着 AI 的发展，将会有一条出路。

评论 5

不过，人工智能正在变得越来越好，所以很快就没关系了。就像在糟糕的 CCTV 录像中也可以挑选出亲戚或密友一样，人工智能也是如此。您的身高，步行步态，举止，声音，耳朵，衣服等，全都加在一起就是你。

## Passage fifty-seven

If you try to **contact** Indy Cube (a provider of workspaces) after 5 pm, you **receive** an **automatic** message that would make a good **demonstration** for the fast-growing four-day week **movement**. "Well **get back to** you pretty quickly during working hours, "it says. "If you're **messaging** us outside of these, **we're** probably **busy with** other things, like horse-riding, dancing, or good sleep."

The firm is one of a growing number of **employers** giving their workers an **extra** day **off** for the same pay as a five-day week. There is **emerging evidence** that it can **boost productivity** for bosses and **happiness** for workers.

And it is not just small businesses that might be **spotting** a chance to save a little money by **turning** the lights **off** one day a week. One of the biggest organizations to make the switch is Perpetual Guardian, whose **shift** has **generated** huge **global** interest, with 406 organizations from **around the world** asking it for advice.

This week we have had people contact us from Japan, Canada, the UK, France, Switzerland, "said its founder Andrew Barnes. The day off that each worker takes varies, depending on the team's needs at the time, but there has been a change in culture with"less time surfing on social media and fewer unnecessary meetings.,"said Barnes.

However, Kate Cooper, policy director at the Institute of Leadership and Management argues the reasons behind increases in productivity are not yet clear. Cooper said that"the Hawthorne effect"may be in play, that is, people change their behaviour simply because they feel they are being observed—in this case they feel that by being granted a four-day week they believe their bosses are interested in their work."How sustainable is that?"Cooper doubts

Comment 1

I don't exactly disagree with a 4-day week so long as I still have the option to work 5 days and get more money for it.

Comment 2

Middle class conception of work-life balance. It's an interesting idea, but so much needs to happen in the UK before this becomes an option for the majority.

Comment 3

True for all these reasons. And I feel there is actually a greater reason: the environment. We need to start producing less stuff in order to reduce the stress on our planet.

Comment 4

I thought this was supposed to be here 20 years ago with the advances in technology.

Comment 5

3 days off a week? Preparing for 7 days off a week.

【参考译文】

如果你在下午 5 点之后联系 Indy Cube 公司（办公区提供商），则会收到一个自动消息，该消息将会很好的展示四天工作制增长趋势。 它回复说：“会在工作日尽快回复你”,“如果你在非工作日给我们发信息，我们可能会忙于别的事情，比如骑马、跳舞或者睡个好觉。”

越来越多的公司每天给他们的员工额外一天假期，而且薪水和每周工作五天的相同，这个公司只是其中之一。有新的证据表明，这种做法可以提升生产力和员工的幸福感。

发现可以通过每周关一天灯来省钱这一机会的并不只是小企业。永久守护者是采取一周四天工作制的最大公司之一，它的转变引起了全球巨大兴趣，来自世界各地的 406 个组织向它征求意见。

该公司的创始人安德鲁·巴恩斯说：“本周，有来自日本、加拿大、英国、法国和瑞士的人与我们联系”。每个员工的休息日不同，这取决于团队当时的需求，但我们在企业文化上发生了变化—“社交媒体上的花费的时间减少，不必要的会议也减少了”巴恩斯说。

然而，领导和管理学院的政策主任凯特·库珀认为提高生产率的原因尚不清楚。库珀说，可能是“霍桑效应”在发挥作用，也就是说，人们之所以改变了自己的行为，只是因为他们觉得自己正在受到关注。---在这种情况下，他们认为，老板让一周只工作四天，说明对自己的工作感兴趣。库珀质疑：“这种增长可持续吗？”

**评论 1**

只要我还能选择一周 5 天工作制，并由此获得更多的薪资，我不太反对一周 4 天工作制。

**评论 2**

这是中产阶级关于平衡工作生活的观念。这是一个有趣的想法，但在这成为英国大多数人的选择之前，还需要做很多工作。

**评论 3**

所有这些原因都是正确的。我觉得实际上有一个更大的原因：环境。我们需要开始生产更少的东西，以减少对地球环境造成的压力。

**评论 4**

我认为随着技术进步，20 年前就应该实现的。

**评论 5**

一周休息三天？准备一周休息七天吧。

## Passage fifty-eight

At SXSW, the tech and culture **conference** in Austin, London **Mayor** Sadiq Khan criticized big tech companies and **regulators** for **failing to stem** the **spread** of **hate**, **misinformation** and **radical viewpoints** online.

The mayor said that governments have been in "**dereliction** of duty" **when it comes to** passing regulations to **combat** the ways technology has **negatively affected** society. "One of the biggest problems over the last few years is that **politicians** and governments have just been **passive—sitting on their hands**—while the tech revolution has happened around them,"Khan said in his **remarks**.

**Ultimately**, he said, it's **up to** governments to **work with** technology businesses and leaders to **make sure** that **technological advancement** has the **proper** checks.

Social media **firms** are already **under new regulatory pressure** in Europe, **thanks to** German laws **enacted** in January that will **fine** companies that don't **take down** problematic **content** within 24 hours of it being reported.

Khan did not **call for** this type of regulation but **warned** that even stricter regulation could be **on its way** if companies don't **respond to** government **concerns**."Ultimately—there must be greater responsibility taken by some tech companies for the **impact** they're having **on** the world."

Comment 1:

Looking at this from t**he point of view** of "industry regulation" is **simply flawed**. **At the core of** this, it is **individuals** who are making **choices** to "post" each and every time. What our society seems to have lost is a sense of **personal responsibility**.

Comment 2:

It's not exactly easy to **implement** laws that targets **content** online. The bigger **issue** is that law **enforcement** simply doesn't have the resources to act on all these crimes happening on the Internet.

Comment 3：

I agree that technology has **failed** us in **at least** one very important way: Twitter, Facebook, etc, published and continues to publish **untruths** and **fake** "news", that some people **assume** are **accurate**. They must do something.

Comment 4:

The companies at issue **promote** the content being **objected to**. That is the content that **drives** their revenues and **profits**. So **self-regulation** just never works without the **threat** of **harsh** regulation.

Comment 5:

Information and **Communications** Technology (ICT), through its **evolution**, has **generally** been **perceived** as **beneficial**, furthering progress and the common good. But, ICT has not had the **foresight** to see how the evolving industry can produce **unintended** consequences. It's time for ICT to **step up**.

【参考译文】

在奥斯汀举办的 SXSW 科技文化大会上，伦敦市长萨迪·汗批判了大型科技公司和监管机构，他们没能阻止网络上仇恨、错误消息和激进观点的传播。

该市长说，政府在通过法规来消除科技给社会带来的负面影响，一直处于“玩忽职守”的状态。汗在评论中说到，过去几年最大的问题是在科技革命发生时，政客和政府态度消极，无所作为。

最后，他说政府应该要与科技企业和领导者合作，确保科技进步有合适的检查机制。

在欧洲，社交媒体公司现已面临新的监管压力。这归功于德国今年一月颁布的法律，在被报道后 24 小时内如未撤下有问题的内容，公司将会被罚款。

汗并不要求这类监管，但他警告称，如果公司不能回应政府的关注，政府将有可能出台更严厉的监管措施。他指出："最后，由于这些科技公司因其对世界的影响，必定要承当更大的责任。"

评论 1：

从"行业监管"的角度来看，这是有缺陷的。这个问题的核心在于，做出随时发布任何消息的选择的行为方是个体。我们的社会似乎已经失去了个人责任感。

评论 2：

针对网上的内容要实施法律制裁并不容易。更大的问题是，执法部门根本没有足够的资源去处理所有的网络犯罪行为。

评论 3：

我认同科技公司至少在一个非常重要的方面让我们失望了：通过推特、脸谱等发布或持续发布不实和虚假的新闻，一些人信以为真，他们必须要做些什么。

评论 4：

这些有争议的公司推送遭到人们反对的内容，正式这些内容给他们带来收入和利润。没有严厉的监管约束，自我监管永远不会起作用。

评论 5：

信息与通讯科技（ICT）的更新总体被认为是有益的，它推动了进步和共同利益。但是 ICT 并没有预测到不断发展的产业会如何产生未知的后果。ICT 是时候提升了。

## Passage fifty-nine

In 2003, I was told by a restaurant **owner** on a Thai island that local fishermen **used to** **wrap** their lunch **in** banana leaves, which they would then **casually toss overboard** when done. That was OK, because the leaves **decayed** and the fish ate them all. But in the past **decade**, he said, plastic wrap had **rapidly replaced** banana leaves, so the beach **was edged with** a **crust** of plastic.

This is a **worldwide** problem—we can't **point the finger at** Thai fishermen. The UK alone **produces** more than 170m tons of **waste** every year, much of it food packaging. Now we live in an **absurd** age where **a packet of** cookies can have seven **layers** of wrapping. While it has **revolutionized** the way we **store** and **consume** food, there is now **so** much of it **that** landfills(垃圾填埋场)can't **cope**. Some of it is **poisonous**, and some of it never **degrades**. It can take 450 years for some types of plastic bottle to **break down**. **Indeed**, as Rachelle Strauss of the UK's Zero Waste Week says, we never actually **throw** anything "**away**"—it's really just put somewhere else.

It's easy to say **despair** at the **scale** of **handing** the plastic wrap, but it isn't **beyond** humanity to solve it—look at how the world **took action** on CFCs(含氯氟烃):

there are **signs** that the hole in the ozone layer is now closing. Food packaging ought to be a **doddle**.

**Comment 1:**

While as an **individual** I can **do my best to** avoid **excessive** packaging, it is really only government **regulation** that can **force** corporation **to** change their practices.

**Comment 2:**

I never understand why supermarket chains **insist on** covering products **such as** bananas and cucumbers in plastic wrap. Why? They have their own packaging—the skin or peel!

**Comment 3:**

I love packaging—if it's well designed of course. It helps us be more hygienic and practical. The **solution to** these packaging **necessities** is clearly to **encourage** the use of bio-degradable packaging.

**Comment 4:**

Before, everything we **threw out** was bio-degradable and now it's not. Guess it's hard to change that **behavior overnight**.

【参考译文】

2003 年，一个泰国的岛上的餐馆老板告诉我，当地的渔民过去常用香蕉叶包他们的午餐，吃完午餐后就会随意地把香蕉叶扔到海里。这是可以的，因为树叶腐烂了，鱼就会吃光所有的叶子。但他继续说，但在过去的十年里，塑料包装已经迅速取代了香蕉叶，所以海滩上就铺了一层塑料。

这是一个世界性的问题——我们不能把矛头指向泰国渔民。仅英国每年产生的垃圾就超过 1.7 亿吨，其中大部分是食品包装。现在我们生活在一个荒谬的时代，在这个时代一袋饼干可以有七层包装。虽然我们已经彻底改变了存储和消耗食物的方式，但是现在有这么多的垃圾以至于垃圾填埋场已经无法处理。有些包装垃圾是有毒的，有些是不会降解的。一些塑料瓶要用 450 年的时间才能分解掉。事实上，正如英国倡导"零废弃物周"的蕾切尔·施特劳斯说的那样，我们从来没有真正地把任何东西"扔"掉——实际上它只是被放在了别的地方。

一想到要处理的如此大规模的塑料包装，我们很容易感到绝望，但这并不是人类不能解决的问题——看看世界是如何在处理氯氟烃上采取行动的：现在有迹象表明，臭氧层空洞正在合拢。处理食品包装问题应该是件轻而易举的事。

评论一

作为个人，我可以尽我最大的努力避免过度包装，但实际上只有政府的监管才能迫使企业改变他们的做法。

评论二

我不明白为什么连锁超市总是坚持用塑料薄膜来包裹香蕉和黄瓜之类的产品。为什么?他们有自己的包装——香蕉皮或黄瓜皮！

评论三

我喜欢包装——当然，如果它设计得很好。它使我们所食用或使用的物品更加卫生和实用。解决这些包装必需品的方案显然是要鼓励使用生物可降解包装。

评论四

以前，我们扔掉的所有东西都是生物降解的，现在不是。我想人们很难在一夜之间改变这种行为。

## Passage sixty

The **saying** "Clothes Make the Man" **dates back** some 400 years and it **refers to** the fact that when people see a well-dressed person, they **assume** that person is a **professional**, **capable**, and (especially in the old days) rich. Therefore, you had to dress like how you wanted to be **perceived**, what you wanted to **eventually** achieve. Fast forward 400 years, lots of folks still think the same way. But does it really **make a difference**?

I **happen to** be one those who do not **put faith in** the old saying. I **suppose** I might be in the **minority** but I am a member of an **elite** club with the **likes** of Steve Jobs and Bill Gates in my camp.

**Perception** is not reality; perception is **halfway** to discovering reality. Perception is **drawn** from our own impressions, our own belief systems. Is it **powerful** and **influential**? Absolutely! Is it all that it seems? Less often than you think. How many times have you cast an **initial** judgment only to surprise yourself later and learn how you missed out on a great opportunity, person or idea?

Comment 1

In the **present era**, many **associate** the well-dressed **with** being the most successful. It took folks in the business world a long times to **overlook** the way Steve Jobs wore jeans on the public stage. I did not know Mr. Jobs, though I wish I had. I have heard it said that he **invented** the **concept** of "business casual." In my mind that is as much a **matter** of self-confidence as it is a matter of taste in clothing.

Comment 2

You are wrong about Steve Jobs. He certainly did care about how he was perceived and his **appearance** was very much **calculated** to achieve his **desired** effect. From his early formal business clothing down to the **aggressive** casuals of his **eventual** black turtle neck and jeans **uniform**, his clothes and the **impact** they made were clearly **foremost** in his mind.

Comment 3

It **reminds** me **of** the story about the philosopher who goes to a formal dinner party in jeans. When asked if he felt **out of place** because of his clothes, he looked around and said he hadn't **noticed**.

【参考译文】

早在四百多年前，就已经有了"人靠衣装，佛靠金装"这样的谚语，说的是，倘若一个人穿着考究，那么这个人肯定是个专业人士，有才华并且富有，这是过去人们普遍的观念。所以，你想别人怎么看待你，或者你想成为什么样的人，那就怎么穿戴。四百年过去了，很多人的观念仍然没有改变。但是穿着真的会影响人们对你的看法吗？

我恰是不赞成该说法的一员。我想我可能是那小部分人，但我是精英俱乐部的一员，和像史蒂夫·乔布斯，比尔盖茨这类的人在同一阵营。

感知不是事实，它是通往发现事实道路的途中。我们对事物的看法源自于我们的印象和信念体系。观念是否很强大，是否影响很大？当然！但真的如此吗？比你想的差远了。多少次你凭印象做出第一判断后，却吃惊地发现，你错过了绝佳的机会，重要的人物或是奇妙的想法？

评论 1

当今，很多人把穿的好等同于成功。商界人士花了很长时间才能忽视斯蒂夫·乔布斯在公开场合穿牛仔裤的穿衣方式。我不认识乔布斯先生，虽然我希望认识他。我听说，他开创了“商务便装”的概念，我认为这既是他穿衣品味的体现，也是自信的体现。

评论 2

你们可能误解了斯蒂夫·乔布斯。他确实很在意别人如何看待他，甚至是刻意要达到他想要的效果。早期时候，他穿着正式的商务装，后来改穿商务便装，如黑色高领衬衫和牛仔服，给人积极进取的印象。显然，他是很重视自己的着装的影响的。

评论 3

这让我想起一个故事：一位哲学家穿着牛仔裤去参加一个正式的宴会，当有人问他是否因为自己的着装而觉得不合时宜，他环顾四周，说他没注意。

## Passage sixty-two

Towards the end of the 1990s, more than a decade and a half Diet Coke was first **introduced**, sale of Coca Cola’s best-selling low caloric drink **appeared to** slow down.

However, in the decade that followed, diet sodas grew by more than 30 percent. In 2009, sales pushed above $8.5 billion for the first time. But America’s **thirst** for Diet Coke is running dry again-and this time it could be **for good**.

The diet soda **slowdown** isn’t **merely** an American thing—it’s also happening **worldwide**. But the future of diet colas is particularly **cloudy** in the United States.

Low calorie sodas are **fighting** a hard **battle** against not one but two **trends** among American consumers. The first is that **overall** soda **consumption** has been **on the decline** since before 2000. Diet sodas, though they might come sugar- and calorie-free, are still sodas, something Americans are proving less and less interested in drinking.

The second, and perhaps more **significant** trend, is a **growing mistrust** of **artificial** sweeteners(甜味剂). “Consumers’ **attitudes** towards sweeteners have really changed.” said Howard Telford, an industry analyst. “There’s a very **negative** perception about artificial sweeteners. The industry is still trying to get its head around this.”

**Comment 1**

**Add** me **to** the number of people **addicted** to diet colas who **quit** drinking soda altogether. I **honestly** think soda is **addictive** and I'm happy not to be drinking it anymore.

**Comment 2**

Perhaps the slowdown has something more to do with the **skyrocketing** cost of soft drinks.

**Comment 3**

I LOVE diet drinks! Am I **unhealthy**? Who knows? I guarantee I have a better **physique** than most 43-year-old men.

**Comment4**

This is a silly and **shallow** piece.The reason for the fall off is simply the explosion in consumption of bottled waters and energy drinks.

**Comment5**

As people learn more about health and **wellness** they will **consume** less sugar, less soda, less artificial sweeteners.

【参考译文】

在 20 世纪 90 年代末，在健怡可口可乐被首次推出 15 年之后，可口可乐公司最畅销的低卡路里饮料的销量似乎降了下来。

然而，在接下来的十年里，无糖汽水的销售增加了 30%多。在 2009 年，其销售额首次超过了 85 亿美元。虽然美国人对于健怡可乐的渴望再次日益消退，并且这一次可能是永久性的。

无糖汽水的销售下滑并不只是出现在美国—在全世界也是如此。但在美国，无糖汽水的未来尤为不乐观。

低热量的汽水正在进行一场艰难的战争，美国消费者的饮料喜好不是一种而是两种趋势。第一种趋势，自 2000 年前以来，整个汽水的消费一直在下降。尽管无糖汽水不含糖或无卡路里，美国人对该汽水是日益失去兴趣。

第二种趋势，或许是更为重要的趋势，消费者越来越不相信人工甜味剂了。一位名叫霍华德·泰尔福德的行业分析师说："消费者都对于甜味剂的态度真地变了。""对于人造甜味剂有一种极为负面的看法。但该行业仍尽全力在处理这一状况"。

评论 1

我以前也是爱喝无糖汽水的，但现在完全戒掉了。我真得认为喝汽水是可以上瘾的，我很高兴自己没有再喝。

评论 2

或许这种下滑，更多的是与软饮猛涨的成本有关。

评论 3

我爱低卡饮料！我不健康吗？谁知道了？我敢保证我的体格比许多 43 岁的男人要好。

评论 4

这真是一件愚蠢又肤浅的事。对于无糖汽水销售的下滑，这只是瓶装水和能量饮料消费的激增。

评论 5

随着人们对于健康与保健了解的越多，人们更倾向于与喝低糖、低碳酸、少人工甜味剂的饮料。

## Passage sixty-three

One of the central **principles** of **raising** kids in America is that parents should be actively **involved in** their children's education: meeting with teachers, **volunteering** at school helping with homework, and doing a hundred other things that few working parents have time for. These **obligations are** so **baked into** American values that few parents stop to ask whether they're **worth** the effort.

Until this January, few researchers did, either. In the largest-ever study of how parental involvement **affects** academic **achievement**, Keith Robinson and Angel L.Harris, two sociology professors at Duke, found that **mostly** it doesn't. The researchers **combed** through nearly three decades' worth of surveys of American parents and **tracked** 63 different measures of parental **participation in** kids'academic lives, from helping them with homework, to **talking with** them about college plans. In an **attempt to** show whether the kids of more-involved parents improved over time, the researchers **indexed** these measures to children's academic performance, **including** test **scores** in reading and math.

What they found surprised them. Most **measurable** forms of parental involvement **seem to yield** few academic **dividends** for kids, or even to **backfire**(适得其反) **-regardless of** a parent's race, class, or level of education.

Do you **review** your daughter's homework every night? Robinson and Harris's data show that this won't help her score higher on standardized tests. Once kids enter middle school, parental help with homework can actually **bring** test scores **down**, an **effect** Robinson says could be caused by the fact that many parents may have forgotten, or never **truly** understood, the material their children learn in school.

While Robinson and Harris **largely disproved** that **assumption**, they did find a **handful** of habits that **make a difference**, **such as** reading aloud to young kids (fewer than half of whom are read to daily) and talking with teenagers about college plans. But these **interventions** don't **take place** at school or in the **presence** of teachers, where policymakers have the most influence - they take place at home.

**Comment 1:**

**Basically** the choice is whether one wants to let kids to be kids. **Persistent** parental involvement and **constantly communicating** to the kids on what the parents want **consciously** or **unconsciously** would help the kids **grow up** or think like the parents sooner than otherwise.

**Comment 2:**

It also **depends on** the kid. **Emotional** and social maturity **have a lot to do with** success in college and in life. Some kids may have the **brains** and **are bored by** high school, but that doesn't mean they are ready for college or the work place.

**Comment 3:**

The article doesn't **define** "helping," but I understand it as actually **assisting** children **in** the exercises (e.g. helping them to solve a math problem) and/or reviewing

their work for **accuracy** rather than simply **making sure** they've **completed** their work. I think the latter is more helpful than the former. I would also certainly hope that no study would **discourage** parents from **monitoring** their children's performance!

【参考译文】

在美国，抚养孩子的核心原则是父母应该积极参与孩子的教育当中：与老师会面，志愿在学校辅助孩子完成作业和做其他很多事情，而工作的父母很少有人有时间去做这些事情。这些义务深深地植入了美国人的价值观，很少有父母会停下来问这样做是否值得。

在今年一月之前，研究人员也很少探究该方面的问题。杜克大学的社会学教授凯思·罗宾森和安琪·哈里斯，开展了有史以来最大规模的研究，研究父母的参与如何影响孩子的学业成绩。结论是：基本上没影响。研究者整理了近三十年来关于美国家长有价值的调查信息，并追踪了家长参与到孩子们学习中的 63 种不同的方式，包括帮助孩子做家庭作业，和孩子们谈论大学计划。研究人员将孩子包括阅读和数学成绩在内的学业表现和父母参与的活动挂钩，以试图证明：经过一段时间后，父母参与其教育较多的孩子是否进步。

研究人员的发现令人感到意外。大多数可测的父母参与形式似乎并没有对孩子的学业有所帮助，甚至适得其反——不论该家长所属的种族、阶级和教育水平如何。

你每天晚上会检查你的女儿的家庭作业吗？罗宾森和哈里斯的研究数据表明，这么做并不会让她在标准测试中取得更高的分数。事实上，一旦孩子读中学时，父母的帮助可能还会让成绩下滑。罗宾森认为，这种结果可能是因为许多家长已经忘记或从没有真正理解孩子们在学校所学的知识。

尽管罗宾森和哈里斯在很大程度上否定了这个假设，他们发现有几个习惯可以起作用，比如面对小孩子大声朗读（能每天朗读的人更是少于一半），与青少年谈大学计划。但这些行为不在学校或老师面前进行—那是政策制定者们最有影响的地方，而是在家里。

评论 1：

从根本上来说，这是一个关于你是否让孩子保持其本性的选择。家长不断地参与孩子的学习，并在经常和孩子交流中表达出自己的想法，不管是有意识还是无意识的，这些行为将更早有助于孩子的成长或让孩子拥有类似于家长的思维方式。

评论 2：

这也取决于孩子。情感和社会的成熟与要在大学和人生中取得成功有很大关系。有些孩子可能很有头脑，觉得高中生活无趣，但这并不意味着他们为上大学或职场生活做好了准备。

评论 3：

这篇文章并没有定义出什么是"帮助"，但我对它的理解是在孩子做练习时协助孩子（比如说帮助他们解决一道数学题）并且/或者是检查他们的作业是否正确而不仅仅是确保孩子完成了作业。我认为后者比前者更有用。当然我也认为没有哪种研究会阻止家长监督孩子的学业表现。

# Passage sixty-four

A **fascinating** new study **reveals** that Americans **are more likely to** call their children "**intelligent**," while European parents **focus on** happiness and balance.

Here's what one parent had to say about the intelligence of her 3-year-old, which was **apparent** to her from the very first moments of her life:

"I have this **vivid** memory, when she was born, of them taking her to clean her off... And she was looking all around... She was **alert** from the very first second... I took her out when she was six weeks old to a shopping mall to have her picture taken-people would stop me and say, "What an alert baby." One guy stopped me and said, "Lady, she was an intelligent baby."

**Not only** are Americans **far more** likely **to** focus on their children's intelligence and **cognitive** skills, they are also far **less likely to** describe them as "happy" or "easy" children to parent.

"The U.S.'s **unhealthy** interest in cognitive development in the early years **overlooks** so much else," the researchers told us.

**Comment 1:**

Probably **indicates** more about **differences** in cultural **attitudes** towards humility and **boasting** than about parenting styles. Here in the Netherlands if someone called their child "intelligent" I'd be **rolling** my eyes, both because it's probably **biased** and **overstated** and because it's just a **rotten thing** to **draw attention to**; **as if** it's all about whose child is "Better". Life isn't that much of a damn **contest** to us.

**Comment 2:**

Agreed! That would apply in Sweden too. Parenting is more focused on the child's well-being than social **competition** (there may be pressures here too, but it is not socially **acceptable** to **express** those things).

**Comment 3:**

I agree and I live in the U.S. Parent's opinions of their children's intellect are **definitely** biased and overstated. It is the most **annoying** thing to listen to. Being "advanced" at a young age has little if anything to do with their ability to learn as they get older and EVERY child is a **genius** if you give them a chance and an ear to listen to them. The happier the kid is, the **smarter** they will be. Happy and **healthy** is key.

【参考译文】

一个有趣的新研究显示，美国人更有可能夸孩子"聪明"，而欧洲人则更关注快乐与平衡。

下面是一个家长谈到她 3 岁孩子的智慧，这显然是在其生命初期给出的评价：

"我还清晰记得，当她出生时，他们把她抱出来清洗干净.....她四处张望.....从刚出生，她就很机灵.....她六周的时候，我带她去了商场，给她照相，人们拦住我说'这孩子太机灵了'。其中一个说'女士，这是个聪明的孩子'。"

美国人不仅仅更关注孩子的智慧和认知能力，同时他们不太会用‘快乐’或者‘随和’来描述他们。

研究者们告诉我们：“对儿童早期认知发展不健康的关注使人忽视了其他很多事情”。

评论 1：

这可能更多地表明了不同国家在谦卑和夸大方面文化态度的差异，而不是育儿风格的差异。在荷兰，如果有人称自己的孩子‘聪明’，我会翻白眼，因为这是有偏见的、夸大的说法，同时为了引人关注、老掉牙的说法，仿佛全世界都关注于谁家的孩子更好。我们生活中没有那么多该死的竞争。

评论 2：

同意。在瑞典也是这样。比起社会竞争来，父母更关注孩子的健康（这里也有压力，但是表达那些事情的做法是不被社会接受的）。

评论 3：

我同意。我也生活在美国父母对孩子智力作用夸大的观念中。这听上去真令人厌烦。小时候优秀表现与长大以后的学习能力几乎没什么关系。如果你给每个孩子机会并倾听他们的心声，每个孩子都是天才。孩子越快乐，他们就越聪明。快乐和健康是关键。

## Passage sixty-five

Drinking wastewater? The idea may sound **distasteful**, but new federally **funded** research says more Americans are doing so—whether they know or not—and this **reuse** will be **increasingly necessary** as the U.S. **population expands**.

**Treated** wastewater **poses** no greater health **risks** than **existing** water supplies and, in some cases, may be even safer to drink, **according to** a report **released** by the National Research Council. “We believe water reuse is **an option to deal with** growing water **scarcity**, especially in coastal areas,” says Jorg Drewes, an engineering professor at the Colorado School of Mines. “This can be done **reliably** without putting the public **at risk**,” he says, **citing** technological advances. He says it’s a waste not to reuse the nation’s wastewater, because almost all of it is treated before **discharge**. This water **includes** storm runoff（径流）**as well as** used water from homes, business and factories.

In many places, the report says, the public does not **realize** it’s drinking water that was treated after being **discharged** as wastewater somewhere **upstream**. **For example**, wastewater discharged into the Trinity River from Dallas/Fort Worth flows south into Lake Livingston, the **source** for Houston’s drinking water.

**Despite** the **growing importance** of this reuse, the report says there’s been no **systemic analysis** of its **extent nationwide** since a 1980 study by the U.S. **Environmental** Protection Agency (EPA). Alan Roberson of the American Water Works **Association** says wastewater reuse is common, so the council’s report is important but not surprising. Roberson **expects** this **recycling** will **continue to** increase, especially for **irrigation** and **industrial** needs. He says it will take longer to

**establish potables** (适于饮用的) uses because of public **nervousness** about drinking wastewater, however treated.

"We have to do something to **address** water **scarcity**," says Olga Naidenko, a **senior** scientist at the **non-profit** Environmental Working Group. "Less than 10% of potable water **is used for** drinking, cooking, showering or **dishwashing**. We **flush** it **down** the toilet, literally." Technologies **exist** to safely treat the water, she says, **although** some are expensive.

The report says water reuse projects **tend to** cost more than most water **conservation** options but less than seawater desalination (脱盐) and other supply alternatives. It **calls on** the EPA to develop rules that **set** safe national standards.

【参考译文】

喝废水？这个想法听起来或许有点倒胃口，但联邦政府支持的一项新研究谈到，越来越多美国人都在知情或不知情的情况下，饮用废水转化而来的水。随着美国人口的增长，废水再利用显得越来越必要。

国家研究委员会的一项报告显示，经过处理的废水存在的健康风险并不比目前所供应水的风险大，并且在某些情况下，它甚至更安全。"我们相信废水再利用是应对水资源短缺的一个选择，特别是在沿海地区。"科罗拉多矿产学院的工程学教授约格·德鲁斯说。"这样的做法是可靠的，而且不会使公众处于危险中"，他也谈及相关的技术进步。他说不利用全国的废水是浪费，因为几乎所有的废水在排放之前都是经过处理的。这些水包括暴雨径流以及家用、商用和工厂废水。

报告显示，许多地方的公众并不清楚他们喝的饮用水是废水从上游排放后经处理所得。例如，由达拉斯或沃斯堡市排放到三一河的废水，向南流入利文斯顿湖，成为休斯顿饮用水的来源地。

尽管废水利用现在日益重要，但报告上说，针对该问题的系统性调查，自1980年以来，美国环保局（EPA）做过一项研究后就再没有全国范围内的系统性分析。美国水利工程协会的阿兰·罗伯森说，废水利用是很普遍的事，委员会报告中的内容很重要，但并不是令人意外。罗伯森认为循环利用会不断发展，特别在灌溉和工业需求方面。他说，无论废水如何处理，公众都会感觉不安心，因此要想研发出适于饮用的水，要花上更多的时间。

美国非营利环境工作组资深科学家奥尔加·奈登科说："我们得做点事解决水资源稀缺的问题。低于10%的可用水被用来饮用、做饭、洗澡、洗盘子。实际上，我们用这些水来冲厕所。"她说，现有的技术可以安全地处理废水，但这些技术造价高昂。

报告上说，水资源再利用项目的成本往往要比节约水资源的花费更多，但少于海水淡化和其他选择。这要求环境保护署出台废水饮用的国家标准。

## Passage sixty-six

In the early 20th **century**, a horse named Clever Hans **was** believed **capable of** counting and other **impressive mental** tasks. After years of great performance, psychologists **discovered** that though Hans was certainly clever, he was not clever in

the way everyone expected. The horse was cleverly **picking up** on tiny, **unintentional** bodily and facial signals **given out** not only by his trainer, but also by the audience. **Aware of** the "Clever Hans" effect, Lisa Lit at the University of California and her colleagues **wondered** whether the **beliefs** of professional dog **handlers** might similarly **affect** the **outcomes** of searches for drugs and explosives. Remarkably, Dr. Lit found, they do.

Dr. Lit asked 18 professional dog handlers and their dogs to **complete brief** searches. Before the searches, the handlers were informed that some of the search areas might **contain up to** three target scents, and also that in two cases those **scents** would be marked by pieces of red paper. What the handlers were not told was that none of the search areas contained the scents of **either** drugs **or** explosives. Any "detections" made by the teams **thus** had to be **false**.

The findings **reveal** that of 144 searches, only 21 were clean (no **alerts**). All the others **raised** one alert or more. **In total**, the teams raised 225 alerts. While the sheer number of false alerts stuck Dr. Lit as fascinating, it was where they **took place** that was of greatest interest.

When handlers could see a red piece of paper, **allegedly** marking a location of interest, they were much **more likely to** say that their dogs **signaled** an alert. The human handlers were **not only distracted** on almost every occasion by the **stimulus aimed at** them, but also **transmitted** that distraction to their animals who responded **accordingly**. To **mix** metaphors, the dogs were crying "wolf" at the **unconscious** signal of their handlers.

How much that matters in the real world is **unclear**. But it might. If a handler, for example, unconsciously "profiled" people being sniffed by a drug, or explosive-detecting dog at an airport, false positive could **abound**. That is not only bad for **innocent** travelers, but might distract the team from catching the **guilty**.

【参考译文】

20 世纪初期，一匹叫"聪明汉斯"的马据说可以完成计数等令人深刻的脑力活动。它数年精彩表现使心理学家发现，尽管汉斯确实聪明，但没有人们想象的那样聪明。这匹马非常聪明，训练师发出的不明显，无意识的身体和表情信号，它都可以看懂，甚至可以领会观众发出的信号。加州大学的丽萨·利特和同事在意识到了这种"聪明汉斯"的效应之后，想弄清楚职业训犬师的信念是否同样会影响到毒品和爆炸物的搜索结果。利特博士发现，很明显确实如此。

利特博士让 18 位训犬师带领各自的狗完成简短的搜索工作。开始之前告知训犬师某些搜索领域最多有 3 处目标气味，其中两处有红纸做标记。但没有告诉训犬师这些地方并不存在毒品和爆炸物的气味。这就是说，这个队伍所给出的任何"侦查结果"都是错误的。

结果显示，总共进行了 144 次搜索，其中只有 21 次搜索没有发现可疑目标。其他搜索都发出一次或更多的的警告。一共发出 225 处警告。出现如此多错误警报着实让利特博士惊讶不已，不过最让人好奇的是发错误警报的位置。

训犬师看到一张红纸并据此标记了一处感兴趣的位置时，他们可能会说他们的狗发出了警报。训犬师不仅会因为那些针对他们的刺激分心，而且也会把这种

分心传递给他们的动物，这些动物也会相应地做出反应。打比方说，狗见到训犬师某个下意识的动作就当成了信号，发出“狼来了”的警告。

在现实世界中，这会起到多大的作用不得而知。但这确实是可能存在的。例如，当训犬师下意识地认为缉毒犬或防暴犬感兴趣的人会有问题的话，误判的现象就会多起来。这不仅让无辜的旅行者不爽，还会误导工作组抓捕犯罪分子。
