范文分析-首段

Currently, the whole society has been split by the topic whether college students should be allowed to get married before they graduate.

Some students think that it is their freedom to get married as long as they are old enough to begin the marriage life legally. While others may argue that the disadvantages that campus marriage brings outweigh its advantages. As for me, I may side with the latter.

范文分析-中间段

Many reasons can be cited to explain why I hold this idea, but the following ones can not be overlooked. First of all, early marriage will influence their study performance. It is hard for college students to meet the challenges if they are not well-prepared for their future.

Secondly, most college students are hardly independent economically, much of whom still rely on support of their parents. In this case, it seems an impossible task to raise families.

Meanwhile, these students make little mental preparation to assume the responsibility to be husband or wife, sometimes even be parents.

范文分析-末段

In conclusion, it is not suitable for college students to get married during their college education. They should make good use of time to prepare themselves for their future.

范文分析-首段

Currently, the whole society has been split by the topic of artificial intelligence. There's no denying that artificial intelligence and its related products have benefited people a lot nowadays.

However, some people believe that it could pose a threat to the human being in large part. In my view, we are expected to maintain an objective and positive attitude towards it

范文分析-中间段

There are many advantages on the application of artificial intelligence.

The first one we cannot overlook is medical field. With the help of artificial intelligence technology, many patients can receive complicated surgeries more accurately.

In addition to the health , there is also a huge economic potential behind artificial intelligence. For example, artificial intelligence can be used to improve productivity of certain industries, which may save the labor and reduce the cost.

However, every coin has two sides, even very smart artificial intelligence device must follow instructions from human to achieve a particular goal. So it is unnecessary for us to fear that artificial intelligence will eventually get out of control.
